For seven years, until 1835, work was suspended, when, at the solicitation of the Duke of Wellington, government advanced the company, on loan, £246,000. At last the entire 1200 feet, from Wapping to Rotherhithe, were completed, and on the 25th of March 1843 the tunnel was opened to the public. Brunel was knighted by the Queen, and his fame was borne to the ends of the earth. As an engineer, the work reflected great credit on him, but commercially it was a failure. It cost well-nigh £500,000, and the tolls produce annually something less than £5000, a sum barely sufficient to keep the tunnel in repair. If it were possible to complete the original design, and open it as a carriage-way, the revenue would be enormously increased; but in order to do so, it is estimated that £180,000 would be required to construct the necessary approaches.

Brunel died in 1849, in his eighty-first year, leaving behind him a son, Isambard Kingdom Brunel, who fully inherited his father's genius. Brunel was a little man, with a head so large, that an Irishman once said, 'Why that man's face is all head!' Many amusing anecdotes are told of his blunders during his moods of inventive abstraction; as, for instance, caressing a lady's hand, who sat next him at table, thinking it his wife's; forgetting his own name, and handing in other people's cards at houses he visited; and getting into wrong coaches, and travelling long distances ere he discovered his mistake. At other times he shewed rare presence of mind. Once when inspecting the Birmingham railway, trains, to the horror of the bystanders, were observed to approach from opposite directions. Brunel, seeing retreat to be impossible, buttoned his coat, brought the skirts close round him, and placing himself firmly between the two lines of rail, the trains swept past, and left him unscathed.

PRAISE-GOD BAREBONES' PARLIAMENT.

When Charles I. had been put to death by the Revolutionists, on the 30th January 1649, the nation was governed, for four or five years, by the parliament, more or less under the control of the successful military leaders. Circumstances gave these military leaders more and more influence; for, owing to the contentions of Royalists, Presbyterians, Levellers, Covenanters, Fifth-Monarchy Men, Antinomians, and other parties, the civil power was very much distracted. Cromwell soon gained an ascendancy over all the other active men of the day, on account both of his military successes, and of the force of his character generally. After the battle of Worcester (September 3, 1651), and the flight of Charles II., Cromwell made gradual strides towards supreme power. The parliament grew jealous of him and the army, and he jealous of their preference for the navy. At length, on April 20, 1653, he forcibly dissolved that celebrated

parliament, known in history as the *Long Parliament*: a most violent proceeding, which made him practically dictator over the whole kingdom.

Cromwell, in his self-assumed capacity as 'captain-general and commander-in-chief of all the armies and forces raised and to be raised within this commonwealth,' summoned a sort of parliament, by an order dated June 6: the parliament or council to consist of persons nominated by him, and not elected by the people. A hundred and forty of these summonses were issued, and all but two of the persons summoned attended. Bulstrode expressed wonder, when recording these events, that so many persons of good-fortune and education accepted the summons from such a man as Oliver. Mr Carlyle comments on Bulstrode's perplexity, and on the constitution of the assembly generally, in one of his most characteristic passages: 'My disconsolate friend, it is a sign that Puritan England, in general, accepts this action of Cromwell and his officers, and thanks them for it, in such a case of extremity; saying, as audibly as the means permitted: Yea, we did wish it so! Rather mournful to the disconsolate official mind! Lord Clarendon, again, writing with much latitude, has characterised this convention as containing in it "divers gentlemen who had estates, and such a proportion of credit in the world as might give some colour to the business;" but consisting, on the whole, of a very miserable beggarly sort of persons, acquainted with nothing but the art of praying; "artificers of the meanest trades," if they even had any trade: all which the reader shall, if he please, add to the general *guano*-mountains, and pass on, not regarding. The undeniable fact is, these men were, as Whitelock intimates, a quite respectable assembly; got together by anxious "consultation of the godly clergy," and chief Puritan lights in their respective counties; not without much earnest revision, and solemn consideration in all kinds, on the part of men adequate enough for such a work, and desirous enough to do it well. The list of the assembly exists; not yet entirely gone dark for mankind. A fair proportion of them still recognisable to mankind. Actual peers one or two: founders of peerage families, two or three, which still exist among us—Colonel Edward Montague, Colonel Charles Howard, Anthony Ashley Cooper. And better than kings' peers, certain peers of nature; whom, if not the king and his pasteboard Norroys have had the luck to make peers of, the living heart of England has since raised to the peerage, and means to keep there—Colonel Robert Blake, the Sea-King, for one. "Known persons," I do think, "of approved integrity, men fearing God;" and perhaps not entirely destitute of sense any one of them! Truly it seems rather a distinguished parliament—even though Mr Praise-God Barebone, "the leather merchant in Fleet Street," be, as all mortals must admit, a member of it. The fault, I hope, is forgivable! Praise-God, though he deals in leather, and has a name which can be misspelt, one discerns to be the son of pious parents; to be himself a man of piety, of understanding, and weight—and even of considerable private capital, my witty flunky friends! We will leave Praise-God to do the best he can, I think.—And old Francis Rouse is there from Devonshire; once member for Truro; provost of Eton College; whom by-and-by they make speaker; whose psalms the northern

kirks will sing. Richard, mayor of Hursley, is there, and even idle Dick Norton; Alexander Jaffray of Aberdeen, Laird Swinton of the College of Justice in Edinburgh; Alderman Ireton, brother of the late Lord Deputy, colleague of Praise-God in London. In fact, a real assembly of the notables in Puritan England; a parliament, *parliamentum*, a real *speaking apparatus* for the now dominant interest in England, as exact as could well be got—much more exact, I suppose, than any ballot-box, free hustings, or ale-barrel election usually yields. Such is the assembly called the *Little Parliament*, and wittily *Barebones' Parliament*. Their witty name survives; but their history is gone all dark.*

This was, indeed, a little parliament of only five months' duration. Hume casts unsparing ridicule on its proceedings; Carlyle praises it, saying that its mission was 'to introduce Christianity into private life.' It failed. 'No wonder,' says Carlyle. 'Fearful impediments lay against that effort of theirs: the sluggishness, the half-and-half-ness, the greediness, the cowardice, the general opacity of ten million men against it—alas, the whole world, and what we call the devil and all his angels, against it! Considerable angels, human and others.' Cromwell found his Little Parliament often going beyond his wishes in reform; and at length a bill to abolish tithes, because the clergy were lazy, and another to abolish the Court of Chancery, raised such a storm against them that Cromwell was glad to get rid of them. By a sort of party-manceuvre, on December 12, the parliament voted its own death, in a resolution: 'That the sitting of this parliament any longer, as now constituted, will not be for the good of the commonwealth; and that therefore it is requisite to deliver up unto the Lord-general Cromwell the powers which we received from him.' The minority insisted on maintaining 'a house,' and continued the sittings with a new speaker. But General Harrison entered with a few soldiers, and asked what they were doing. 'We are seeking the Lord,' said they. 'Then you may go elsewhere,' said he: 'for to my certain knowledge, He has not been here these many years.' Thus the 'Barebones' Parliament' died: four days afterwards, Oliver Cromwell became Protector.

THE TRADESCANTS.

The following lines are inscribed upon a tomb in Lambeth churchyard:

'Know, stranger, ere thou pass; beneath this stone,
Lye John Tradescant, grandsire, father, son;
The last dy'd in his spring; the other two
Lived till they had travelled Art and Nature through,
As by their choice collections may appear,
Of what is rare, in land, in sea, in air;
Whilst they (as Homer's Iliad in a nut)
A world of wonders in one closet shut.
These famous antiquarians that had been
Both Gardeners to the Rose and Lily Queen,
Transplanted now themselves, sleep here; and when
Angels shall with their trumpets waken men,
And fire shall purge the world, these hence shall rise
And change this garden for a paradise.'

The grandsire of the above epitaph came of Flemish origin. After travelling through Europe

* *Oliver Cromwell's Letters and Speeches, with Elucidations by Thomas Carlyle*, vol. ii. p. 388.

and in the East, he settled in England; and was at one time gardener to the Duke of Buckingham, and afterwards to Charles I. He formed a large 'physic garden' at South Lambeth, and was the means of introducing many plants into this country. So ardent was he in the acquisition of rarities, that he is said to have joined an expedition against the Algerine corsairs, in order to obtain a new sort of apricot from North Africa, which was known thence as the Alger apricot. He was also an enthusiastic collector of curiosities, with which he filled his house, and earned for it the popular name of 'Tradeskin's Ark.' He died at an advanced age, in 1652 or 1653. His son, another John Tradescant, followed in his father's footsteps. In 1656, he published a catalogue of his collection under the title of *Museum Tradescantianum*. From this we learn that it was indeed a multifarious assemblage of strange things—stuffed animals and birds, chemicals, dyeing materials, idols, weapons, clothes, coins, medals, musical instruments, and relics of all sorts. We here enumerate a few of the strangest articles—'Easter eggs of the patriarchs of Jerusalem; two feathers of the phoenix taylor; claw of the bird Roc, who, as authors report, is able to truss an elephant; a natural dragon above two inches long; the Dodad, from the isle of Mauritius, so big as not to be able to fly; the bustard, as big as a turkey, usually taken by greyhounds on Newmarket Heath; a cow's tail from Arabia; half a hazelnut, with seventy pieces of household stuff in it; a set of chessmen in a peppercorn; landskips, stories, trees, and figures, cut in paper by some of the emperors; a truncheon of Drake's ship; knife wherewith Hudson was killed in Hudson's Bay; Anna Bullen's night-vail; Edward the Confessor's gloves.'

In Ashmole's diary, under date 12th December 1659, occurs this entry: 'Mr Tradescant and his wife told me they had long been considering upon whom to bestow their closet of curiosities when they died, and at last resolved to give it unto me.' Tradescant died in 1672, and bequeathed his house to Ashmole, who, after some litigation with his friend's widow, took possession of the ark in 1674. The collection was left by Ashmole to the university of Oxford, and was the nucleus of the museum bearing his name.

In May 1747, Sir W. Watson visited the long-neglected garden of Tradescant, and found it entirely grown over with weeds, with which, however, a few of the old gardener's favourites yet struggled for life. Among them were 'two trees of the arbutus, the largest which I have seen, which from their being so long used to our winters, did not suffer by the severe colds of 1729 and 1740, when most of their kind were killed throughout England.'

DECEMBER 13.

St Lucy, virgin and martyr, 304. St Jodoc or Josse, confessor, 666. St Aubert, bishop of Cambrai and Arras, 669. St Othilia, virgin and abbess, 772. St Kenelm, king and martyr, 820. Blessed John Marinoni, confessor, 1502.

ST LUCY.

St Lucy was a native of Syracuse, and sought in marriage by a young nobleman of that city; but

she had determined to devote herself to a religious life, and persistently refused the addresses of her suitor, whom she still further exasperated by distributing the whole of her large fortune among the poor. He thereupon accused her to the governor, Paschasius, of professing Christian doctrines, and the result was her martyrdom, under the persecution of the Emperor Dioclesian. A curious legend regarding St Lucy is, that on her lover complaining to her that her beautiful eyes haunted him day and night, she cut them out of her head, and sent them to him, begging him now to leave her to pursue, unmolested, her devotional aspirations. It is added that Heaven, to recompense this act of abnegation, restored her eyes, rendering them more beautiful than ever. In allusion to this circumstance, St Lucy is generally represented bearing a platter, on which two eyes are laid; and her intercession is frequently implored by persons labouring under ophthalmic affections.

The Ember-days.

The Ember-days are periodical fasts originally instituted, it is said, by Pope Calixtus, in the third century, for the purpose of imploring the blessing of Heaven on the produce of the earth; and also preparing the clergy for ordination, in imitation of the apostolic practice recorded in the 13th chapter of the Acts. It was not, however, till the Council of Placentia, 1095 A.D., that a uniformity as regards the season of observance was introduced. By a decree of this assembly, it was enacted that the Ember-days should be the first Wednesday, Friday, and Saturday following, respectively, the first Sunday in Lent, or Quadragesima Sunday, Whitsunday, Holyrood Day (14th September), and St Lucy's Day (13th December). The term is said to be derived from the Saxon *emb-ren* or *imb-ryne*, denoting a course or circuit, these days recurring regularly, at stated periods, in the four quarters or seasons of the year. Others, with some plausibility, derive the epithet from the practice of sprinkling dust or embers on the head, in token of humiliation; and also from the circumstance that at such seasons it was only customary to break the fast by partaking of cakes baked on the embers, or *ember-bread*. In accordance with a canon of the English Church, the ordination of clergymen by the bishop generally takes place on the respective Sundays immediately following the ember-days. The weeks in which these days fall, are termed the *Ember-weeks*, and in Latin the ember-days are denominated *Jejunia quatuor temporum*, or 'the fasts of the four seasons.'

Born.—Pope Sixtus V., 1521, *Montalto*; Henri IV. of France, 1553, *Pau*; Maximilien de Bethune, Duke of Sully, minister of Henri IV., 1560, *Rosny*; William Drummond, poet, 1585, *Hawthornden*; Rev. Arthur Penrhyn Stanley, biographer of Dr Arnold, 1815.

John Strype, historical writer, 1737, *Hackney*; Christian Furchtegott Gellert, writer of fables, 1769, *Leipsic*; Peter Wargentin, Swedish astronomer, 1783, *Stockholm*; Dr Samuel Johnson, lexicographer, 1784, *London*; Charles III. of Spain, 1788.

THE COUNCIL OF TRENT.

This celebrated council, the last which has been summoned by the Roman Catholic Church, was formally opened on 13th December 1545, and closed on 4th December 1563. Its sittings extended thus, with various prorogations, over a period of eighteen years, and through no less than five pontificates, commencing with Paul III., and ending with Pius IV.

The summoning of a general council had been ardently desired by the adherents both of the Roman Catholic and Reformed systems, partly from a desire to have many great and scandalous abuses removed, partly from the hope of effecting a reconciliation between the opposite faiths, through mutual concession and an adjustment of the points in dispute by the decision of some authoritative assembly. The requisition to convoke such a meeting was first made to Clement VII., and was seconded, with all his influence, by the Emperor Charles V.; but, as is well known, popes have ever had the greatest dislike of general councils, regarding them as dangerous impugnors of their pretensions, and at the present conjuncture no proposal could have been more distasteful. Well knowing the ecclesiastical abuses that prevailed, and fearful of the consequences of inquiry and exposure, Clement, by various devices, contrived, for the short remainder of his life, to elude compliance with the unpalatable proposition. But his successor, Paul III., found himself unable, with any appearance of propriety, to postpone longer a measure so earnestly desired, and he accordingly issued letters of convocation for a general ecclesiastical council. After much disputation, the town of Trent, in the Tyrol, was fixed on as the place of meeting of the assembly.

But with all the preliminary arrangements entered into, the German Protestant subjects of Charles V. were thoroughly dissatisfied. The place chosen for the meeting was unsuitable from its remote situation, and an infinitely weightier objection was made to the right assumed by the pope of presiding in the council and directing its deliberations, together with the refusal to guarantee, throughout the proceedings, the recognition of the Scriptures, and the usage of the primitive church, as the sole standards of faith. After some abortive attempts to accommodate these differences, the Protestants finally declined to attend or recognise in any way the approaching council, which was accordingly left wholly to the direction of the Catholics. One of the first points determined was: 'That the books to which the designation of *Apocryphal* hath been given, are of equal authority with those which were received by the Jews and primitive Christians into the sacred canon; that the traditions handed down from the apostolic age, and preserved in the church, are entitled to as much regard as the doctrines and precepts which the inspired authors have committed to writing; that the Latin translation of the Scriptures, made or revised by St Jerome, and known by the name of the *Vulgate* translation, should be read in churches, and appealed to in the schools as authentic and canonical.' In virtue of its infallible authority, claimed to be derived from the immediate inspiration of the Holy Spirit, the council denounced anathemas against all those who should impugn or

deny the validity of its decisions. The ancient formula, however, prefixed by ecclesiastical councils to their deliverances—*It has seemed good to the Holy Spirit and to us*—was, on the occasion of the assembly at Trent, exchanged for the milder phrase—*In the presence of the Holy Spirit it has seemed good to us*.

This specimen, given by the council at the commencement of its proceedings, was sufficiently indicative of the results to be eventually expected. So far from any modification being effected in the tenets or claims of the Roman Catholic Church and its ministers, these, on the contrary, were more rigorously enforced and defined. In the words of Dr Robertson: 'Doctrines which had hitherto been admitted upon the credit of tradition alone, and received with some latitude of interpretation, were defined with a scrupulous nicety, and confirmed by the sanction of authority. Rites, which had formerly been observed only in deference to custom, supposed to be ancient, were established by the decrees of the church, and declared to be essential parts of its worship. The breach, instead of being closed, was widened and made irreparable.' While thus so antagonistic to Protestant views, the decrees of the Council of Trent are generally regarded as one of the principal standards and completed digests of the Roman Catholic faith.

ANTIQUARIAN HOAXES.

One of the most amusing traits in the character of Sir Walter Scott's kind-hearted antiquary, the estimable Monkbarns, is his perfect reliance on his own rendering of the letters A. D. L. L., on a stone he believes to be antique, and which letters he amplifies into *Agricola dicavit libens lubens*; a theory rudely demolished by Edie Ochiltree, who pronounces 'the sacrificial vessel,' also on the stone, to be the key to its true significance, *Aikin Drum's lang ladle*. Scott had 'ta'en the antiquarian trade' (as Burns phrases it) early in life, and commenced his literary career in that particular walk; his early rambles on the line of the great Roman Wall, in the Border counties, would familiarise him with inscriptions; and his acquaintance with antiquarian literature lead him to the knowledge of a few mistakes made in works of good repute. In depicting the incident above referred to, he might have had in his mind the absurd error of Vallancey, who has engraved in his great work on Irish Antiquities, a group of sepulchral stones on the hill of Tara, having upon one an inscription which he reads thus: BELI DIVOSE, 'To Belus, God of Fire.' He indulges, then, in a long and learned disquisition on this remarkable and unique inscription;

ALTAR TO BAAL.

which he has also so carefully engraved, that its real significance may easily be tested. It turned

out to be the work of an idler, who lay upon the stone, and cut his name upside down with the date of the year: E. CONID. 1731; and if the reader will turn the engraving on the preceding page, the whole thing becomes clear, and Baal is deprived of his altar.

Dean Swift had successfully shewn how a choice of words, and their arrangement, might make plain English look exceedingly like Latin. The idea was carried out further by some wicked wit, who, aided by a clever engraver, produced, in 1756, a print called 'The Puzzle,' which has never been

surpassed in its peculiar style. 'This curious inscription is humbly dedicated,' says its author, 'to the penetrating geniuses of Oxford, Cambridge, Eton, and the learned Society of Antiquaries.' The first, fourth, sixth, and three concluding lines are particularly happy imitations of a Latin inscription. It is, however, a simple English epitaph; the key, published soon afterwards, tells us: 'The inscription on the stone, without having regard to the stops, capital letters, or division of the words, easily reads as follows: "Beneath this stone

THE MYSTERIOUS INSCRIPTION: ANTIQUARIES PUZZLED.

reposeth Claud Coster, tripe-seller of Impington, as doth his consort Jane."

Such freaks of fancy may fairly be classed with Callot's *Impostures Innocentes*; not so when false inscriptions and forged antiques have been fabricated to mislead the scholar, or make him look ridiculous. One of the most malicious of these tricks was concocted by George Steevens, the Shakspearian commentator, to revenge himself on Gough, the director of the Society of Antiquaries of London, and author of the great work on our Sepulchral Monuments. The entire literary life of Steevens has been characterised as displaying an unparalleled series of arch deceptions, tinged with much malicious ingenuity. He scrupled not, when it served his purpose, to invent quotations

from old books that existed only in his imagination, and would deduce therefrom corroboration of his own views. Among other things, he invented the famous description of the poisonous upas-tree of Java, and the effluvia killing all things near it. This account, credited by Darwin, and introduced in his *Botanic Garden*, spread through general literature as a fact; until artists at last were induced to present pictures of the tree and the deadly scene around it. Steevens chose the magazines, or popular newspapers, for the promulgation of his inventions, and signed them with names calculated to disarm suspicion. It is impossible to calculate the full amount of mischief that may be produced by such means—literature may be disfigured, and falsehood take the place of fact.

The trick on Gough was the fabrication of an inscription, purporting to record the death of the Saxon King, Hardicanute, and was done in revenge for some adverse criticism Gough had pronounced on a drawing of Steevens. Steevens vowed that, wretched as Gough deemed his work, it should have the power to deceive him. He obtained the fragment of a chimney-slab, and scratched upon it an inscription in Anglo-Saxon letters, to the effect that 'Here Hardenut drank a wine-horn dry, stared about him, and died.' It was alleged to have been discovered in Kennington Lane, where the palace of the monarch was also said to have been, and the fatal drinking-bout to have taken place. The stone was placed carelessly among other articles in a shop where Gough frequently called. He fell fairly into the trap; and brought forward his imagined prize, as a great historic curiosity, to the notice

of the Society of Antiquaries. One of the ablest members of the association—the Rev. S. Pegge—was induced to write a paper on the subject. Schnebbelie, the draughtsman of the society, was employed to draw the inscription carefully, and it was engraved, and published in vol. lx. of the *Gentleman's Magazine*, from which our cut is copied.

The falsely-formed letters, and absurd tenor of the whole inscription, would deceive no one now. Luckily, before its publication in the *Magazine*, its history was discovered; but as the plate contained other subjects, it was nevertheless issued, with a note of warning appended. Steevens, however, followed up his success with a bitter description of the triumph of his fraud, and the impossibility of Gough's 'wriggling off the hook on which he is so archæologically suspended.'

Instances might be readily multiplied of similar deceptive inventions; indeed, the history of falsehood and forgery in connection with antiquities is as vast as it is still unceasing. Rome and Naples are to-day what Padua was in the sixteenth century—the birthplace of spurious curiosities, manufactured with the utmost art, and brought forth with the greatest apparent innocence. No-

thing is forgotten to be done that may effectually deceive; and the unguarded stranger may see objects dug out of ruins apparently ancient, that have been recently made, and placed there for his delectation. A brisk trade in painted vases has always been carried on; and many of them, evidently false, have been published in works of high character.

THE HARDICANUTE MARBLE.

FAME ELUDING HER FOLLOWER.

Birch, in his *History of Ancient Pottery*, speaks of this, and adds: 'One of the most remarkable fabricated engravings of these vases was that issued by Bronsted and Stackelberg, in a fit of archæological

jealousy. A modern archæologist is seen running after a draped female figure called ΦΗΜΗ, or *Fame*; who flies from him, exclaiming ΕΚΑΣ ΠΑΙ ΚΑΛΕ, "Be off, my fine fellow!" This vase, which never

existed except upon paper, deceived the credulous Inghirami, who, too late, endeavoured to expunge it from his work.' Consequently his valuable book on *Vasi Fittili* is disfigured by this absurd invention, and our cut is traced from his plate. These mischievous tricks compel the student to double labour—he has not only to use research, but to be assured that what he finds may be depended on. Supposed facts may turn out to be absurd fictions, and the stream of knowledge be poisoned at its very source.

THE NINE WORTHIES OF LONDON.

Everybody has read, or at least heard, of the famous *History of the Seven Champions of Christendom*, but few, we suspect, have either read or heard of another work by the same author, which, if less interesting than the chivalric chronicle dear to boyhood, has the merit of being to some extent founded on fact. In the year 1592, Mr Richard Johnson gave to the world *The Nine Worthies of London; explaining the honourable Exercise of Arms, the Virtues of the Valiant, and the Memorable Attempts of Magnanimous Minds; pleasant for Gentlemen, not unseemly for Magistrates, and most profitable for 'Prentices*.

This chronicle of the deeds of city-heroes is a curious compound of prose and verse. The Worthies are made to tell their own stories in rhyme, to a prose accompaniment unique in its way. What that way is, may be judged by the following quotation from the fanciful prelude: 'What time Fame began to feather herself to fly, and was winged with the lasting memory of martial men; orators ceased to practise persuasive orations, poets neglected their lyres, and Pallas herself would have nothing painted on her shield save mottoes of Mars, and emblems in honour of noble achievements. Then the ashes of ancient victors, without scruple or disdain, found sepulture in rich monuments; the baseness of their origin shaded by the virtue of their noble deeds.' Fame, however, was still fearful of her honour growing faint, and, in her fear, betook herself to Parnassus, and invoked the aid of the Muses in order to revive 'what ignorance in darkness seems to shade, and hateful oblivion hath almost rubbed out of the book of honour—the deeds not of kings, but of those whose merit made them great.' Choosing Clio as her companion, Fame re-entered her chariot, and speedily reached the Elysian Fields, where, upon a rose-covered bank, nine handsome knights lay asleep; waking them up, she desired them to tell their several adventures, that Clio might take them down for the benefit of mankind in general, and London 'prentices in particular.

Then forth stepped Sir William Walworth, fishmonger, twice lord mayor of London (in 1374 and 1380). His narrative begins and ends with the great event of his second mayoralty—the rebellion of Wat Tyler. He relates how the malcontents advanced to London, mightily assailed the Tower walls, and how—

'Earle's manner houses were by them destroyed;
The Savoy and S. Jones by Smithfield spoiled.'

While—

'All men of law that fell into their hands
They left them breathless, weltering in their blood;
Ancient records were turned to firebrands,
Any had favour sooner than the good:

So stout these cut-throats were in their degree,
That noblemen must serve them on their knee.'

To protect the person of the young king when he went to meet the rebels at Smithfield, Walworth attended with

'A loyal guard of bills and bows
Collected of our tallest men of trade.'

During the parley with Wat Tyler, the sturdy magistrate sat chafing with anger at the audacity of the blacksmith's followers, but refrained from interfering, because his betters were in place, till he could control himself no longer—

'When I saw the rebels' pride increasing,
And none control or counter-check their rage;
'Twere service good (thought I) to purchase peace,
And malice of contentious brags assuage,
With this conceit all fear had taken flight,
And I, alone, pressed to the traitors' sight.

Their multitude could not amaze my mind,
Their bloody weapons did not make me shrink,
True valour hath his constancy assigned,
The eagle at the sun will never wink.
Among their troops incensed with mortal hate,
I did arrest Wat Tyler on the pate.

The stroke was given with so good a will,
I made the rebel couch unto the earth;
His fellows that behind (though strange) were still,
It marred the manner of their former mirth.
I left him not, but ere I did depart,
I stabbed my dagger to his damned heart.'

For which daring deed Richard immediately dubbed him a knight.

'A costly hat his Highness likewise gave;
That London's maintenance might ever be,
A sword also he did ordain to have,
That should be carried still before the mayor,
Whose worth deserved succession to the chair.'

The second speaker is Sir Henry Pitchard, who commences his story with an atrocious pun:

'The potter tempers not the massive gold,
A meaner substance serves his simple trade,
His workmanship consists of slimy mould,
Where any placed impression soon is made.
His Pitchards have no outward glittering pomp,
As other metals of a firmer stamp.'

After serving in the wars of Edward III., Pitchard set up as a vintner, and throve so well that he was elected lord mayor (1356); he hints that he could speak of liberal deeds, but prefers to rest his claim to honourable consideration upon his anxiety for the advance of London's fame, and the part he played on Edward's return from France with 'three crowns within his conquering hand.'

'As from Dover with the prince his son,
The kings of Cyprus, France, and Scots did pass,
All captive prisoners to this mighty, one,
Five thousand men, and I their leader was,
All well prepared, as to defend a fort,
Went forth to welcome him in martial sort.
When the city 'peared within our sights,
I craved a boon, submissee upon my knee,
To have his grace, these kings, with earls and knights,
A day or two, to banquet it with me,
The king admired, yet thankfully replied:
"Unto thy house, both I and these will ride,"

The royal guests and their followers were right hospitably entertained :

‘ For cheer and sumptuous cost no coin did fail,
And he that thought of sparing did me wrong.’

This truly civic achievement is at once admitted by Clio to justify Pitchard’s enrolment among the Worthies Nine.

Sir William Sevenoke tells how he was found under seven oaks, near a small town in Kent, and after receiving some education, was apprenticed to a grocer in London. His apprenticeship having expired, he went with Henry V. to France, where—

‘ The Dolphyne [Dauphin] then of France, a comely knight,
Disguised, came by chance into a place
Where I, well wearied with the heat of fight,
Had laid me down, for war had ceased his chace;
And, with reproachful words, as lazy swain
He did salute me ere I long had lain.

I, knowing that he was mine enemy,
A bragging Frenchman (for we termed them so),
Ill brooked the proud disgrace he gave to me,
And therefore lent the Dolphyne such a blow,
As warmed his courage well to lay about,
Till he was breathless, though he were so stout.

At last the noble prince did ask my name,
My birth, my calling, and my fortunes past;
With admiration he did hear the same,
And so a bag of crowns he to me cast;
And, when he went away, he said to me :
“ Sevenoke, be proud, the Dolphyne fought with thee!”

The war over, Sevenoke determined to turn grocer again, and in time became famous for his wealth. [In 1413, Sevenoke was made sheriff; in 1418, he was elected lord mayor; and, two years later, he represented London in parliament. By his will, he set apart a portion of his wealth to build and maintain twenty almshouses, and a free-school at Seven-oaks. In Elizabeth’s reign, the school was named ‘Queen Elizabeth’s Grammar School,’ and received a common seal for its use. It still exists, and possesses six exhibitions wherewith to reward its scholars.]

Sir Thomas White, merchant-tailor, lived in the days of Queen Mary. He says he cannot speak of arms and blood-red wars—

‘ My deeds have tongues to speak, though I surcease,
My orators the learned strive to be,
Because I twined palms in time of peace,
And gave such gifts that made fair learning free;
My care did build these bowers of sweet content,
Where many wise their golden times have spent.

The English cities and incorporate towns
Do bear me witness of my country’s care;
Where yearly I do feed the poor with crowns,
For I was never niggard yet to spare;
And all chief boroughs of this blessed land,
Have somewhat tasted of my liberal hand.’

Sir John Bonham’s life seems not to have lacked excitement. Born of gentle parents, he was apprenticed to a mercer, and shewed such qualities that he was intrusted with a valuable cargo of merchandise for the Danish market. He was received at the court of Denmark, and there made such progress in the favour of the king’s

daughter, with whom every knight was in love, that she gave him a favour to wear in his helmet at a grand tournament—

‘ They that have guiders cannot choose but run,
Their mistress’s eyes do learn them chivalry,
With those commands these tournays are begun,
And shivered lances in the air do fly.
No more but this, there Bonham had the best,
Yet list I not to vaunt how I was blest.’

Despite his success in arms, Bonham did not neglect business, and as soon as he had sold his cargo and refilled his ship, he made preparations for returning home. Just as he was about to leave Denmark, the Great Solymán declared war, and began to ravage the country. Bonham was offered the command of an army destined to arrest the progress of the invader; he accepted it, and soon joined issue with the foe, half of whose army—

‘ Smouldered in the dust,
Lay slaughtered on the earth in gory blood;
And he himself compelled to quell his lust
By composition, for his people’s good.
Then at a parley he admired me so,
He made me knight, and let his army go.’

The generosity of the Turk did not stop here; he loaded the new-made knight with chains of gold and costly raiment, to which the monarch he had served so well added—

‘ Gifts in guerdon of his fight,
And sent him into England like a knight.’

Our sixth Worthy rejoiced in the alliterative appellation of Christopher Croker. He was bound ‘prentice to a vintner of Gracechurch Street, and, according to his own account, must have been a fascinating young fellow—

‘ My fellow-servants loved me with their hearts;
My friends rejoiced to see me prosper so,
And kind Doll Stodie (though for small deserts),
On me vouchsafed affection to bestow.’

Still, Croker was not satisfied. He burned with a desire to raise his sweetheart to high estate, and when he was pressed for the army—believing his opportunity had arrived—he was proof against the arguments of his master, and the tears of his master’s daughter. To France he went, and there, he says—

‘ To prove my faith unto my country’s stay,
And that a ‘prentice, though but small esteemed,
Unto the stoutest never giveth way
If credit may by trial be redeemed.
At Bordeaux siege, when others came too late,
I was the first made entrance through the gate.’

When that famous campaign was ended, our brave ‘prentice was one of ten thousand men chosen by the Black Prince to aid him in restoring Don Pedro to the Castilian throne; and when he returned to England, he returned a knight.

‘ Thus labour never loseth its reward,
And he that seeks for honour sure shall speed.
What craven mind was ever in regard?
Or where consisteth manhood but in deed?
I speak it that confirmed it by my life,
And in the end, Doll Stodie was my wife.’

Sir John Hawkwood was born to prove it does not always take nine tailors to make a man.

His conduct in action won the notice of the Black Prince, who gave him a noble steed; and he made such good use of the gift, that he was knighted by that great captain, and enrolled among 'the Black Prince's knights.' When there were no more battles to be fought in France, Sir John collected together a force of 15,000 Englishmen, with which he entered the service of the Duke of Milan, and immortalised himself in Italian history as 'Giovanni Acuti Cavaliere.' He afterwards fought on the side of Spain against the pope, and having acquired riches and reputation, returned to Padua to die.

Like most of his co-worthies, Sir Hugh Caverley, silk-weaver, won his knighthood in France. He then went to Poland, and became renowned as a hunter, and earned the gratitude of the people by terminating the career of a monstrous boar that troubled the land. For many years he lived in honour in Poland, but ultimately left that country for France, where he died. The last of the Nine Worthies was Sir Henry Maleverer, grocer, commonly called Henry of Cornhill, who lived in the days of Henry IV. He became a crusader, and did not leave the field till he saw the Holy City regained from the infidels. He stood high in favour with the king of Jerusalem, till that monarch's ears were poisoned against him, when, to avoid death, the gallant knight was compelled to seek a hiding-place. This he found in the neighbourhood of Jacob's Well, of which he assumed the guardianship.

'For my pleasure's sake

I gave both knights and princes heavy strokes;

The proudest did presume a draught to take

Was sure to have his passport sealed with knocks.

Thus lived I till my innocence was known,

And then returned; the king was pensive grown,

And for the wrong which he had offered me,

He vowed me greater friendship than before;

My false accusers lost their liberty,

And next their lives, I could not challenge more.

And thus with love, with honour, and with fame,

I did return to London, whence I came.

When the last of the Worthies thus concluded his story, Fame gently laid his head upon a soft pillow, and left him and his companions to the happiness of their sweet sleep, and enjoined Clio to give the record of their lives to the world, 'that every one might read their honourable actions, and take example by them to follow virtue and aspire.'

DECEMBER 14.

St Spiridon, bishop and confessor, 348. Saints Nicasius, archbishop of Rheims, and his companions, martyrs, 5th century.

Born.—Michael Nostradamus, famous prophet, 1503, *St Remy, in Provence*; Tycho Brahe, astronomer, 1546, *Knudsthorp, near the Baltic*; Barthélemy d'Herbelot, orientalist, 1625, *Paris*; Daniel Neal, divine and author (*History of the Puritans*), 1678, *London*; James Bruce, Abyssinian traveller, 1730, *Kinnaird, Stirlingshire*; Rev. Charles Wolfe, author of *The Burial of Sir John Moore*, 1791, *Dublin*.

Died.—Pope Anastasius I., 402; Sir John Oldecastle, Lord Cobham, burned as a Lollard, 1417, *St Giles Fields, London*; Dean Henry Aldrich, of Christ-Church, Oxford, eminent scholar and divine, 1710; Thomas Rymer, historical writer, 1713; Thomas Tenison, archbishop of Canterbury, 1715, *Lambeth*; Sir William Trumbull, statesman and man of letters, 1716; General George Washington, American patriotic commander and statesman, 1799, *Mount Vernon, Virginia*; Conrad Malte-Brun, geographer, 1826, *Paris*; J. C. Loudon, botanical writer, 1843, *Bayswater, London*; Earl of Aberdeen, statesman, 1860, *London*; Prince Albert, consort of Queen Victoria, 1861, *Windsor Castle*.

J. C. LOUDON.

There is quite as much difference between a gardener of the old school, and one of the modern era, as exists between the old sea-captain, and the scientific naval officer of the present day; Andrew Fairservice has paired off with Commodore Trunnion, and we are very well rid of both of them. There can be no doubt that the eminent position to which the art of gardening and its professors have of late years attained, is mainly due to the teachings of John Claudius Loudon. The writer well remembers the terrible outcry among the old-school gardeners when Loudon's *Encyclopædia* first appeared. 'This bookmaking-fellow,' they cried, 'will teach the gentry everything, and the masters and mistresses will know more than we do!' Their words were verified; but the consequence was, that the young gardeners had to study, in order to keep pace with their employers, and doing so speedily raised their craft to a higher platform. Having commenced this movement, Loudon devoted his whole life to urge it forward. He incessantly laboured to shew, that horticulture and botany were merely the foundations of the gardener's calling; that something more than a smattering of a dozen other arts and sciences was necessary to complete the superstructure. And now, when the grave has closed over him for twenty years, it is amply testified by the most convincing proofs that his ideas were correct.

It was in 1822 that Loudon gave to the world the most important and comprehensive publication ever written on horticulture—*The Encyclopædia of Gardening*; a work fully meriting its pretentious title; and though, of necessity, a compilation, enriched with much useful original matter, the result of his continental travels. The success of this work induced him to undertake a series of encyclopædias on agriculture, botany, and cognate subjects, the last of which appeared in 1832. The herculean toils of these ten years are beyond description. 'The labour,' says Mrs Loudon, 'was immense; and for several months he and I used to sit up the greater part of every night, never having more than four hours sleep, and drinking strong coffee to keep ourselves awake.' Undeterred, however, he next commenced a more extended and labour-exacting work than any of his previous productions, an *Arboretum et Fruticetum Britannicum*, embracing every particular relative to the trees and shrubs—whether native or introduced—of the British islands. It is scarcely credible, but no less true, that during the time these vast works were in course of production, Loudon edited several periodicals. In 1826, he established the *Gardener's Magazine*, which he continued till his death. In

1826, he commenced his *Magazine of Natural History*, and edited it until 1836, when it passed into other hands. In 1834, he commenced the *Architectural Magazine*, discontinuing it in 1838; but in 1836 he began publishing his *Suburban Gardener*. It may be safely said, that such multifarious and incessant labours are without a parallel in literature.

A quaint old farmer of our acquaintance, when speaking of a person who worked very hard without deriving much profit from his labours, said that he had turned over a great deal of grass, but made very little hay. It is painful to relate, that the very same words might be applied to Loudon's heroic undertakings. When the Arboretum was completed in 1838, Loudon, who published at his own expense and risk, found himself indebted to printer, paper-maker, and engraver no less a sum than £10,000.

Loudon's literary labours would appear excessive, even for a man in perfect health, and with the vigorous use of his limbs; but they seem little less than miraculous, when the circumstances under which they were carried on are taken into consideration. A severe attack of rheumatic fever when in his twenty-third year, produced a permanent stiffness of the left knee. Subsequently his right arm became affected, and Loudon was advised to try the curative effects of shampooing. During this process, the arm was broken so close to the shoulder as to render setting it in the usual mode impossible. Shortly after, the arm was again broken; and then, in 1826, amputation became unavoidable. In this year, it will be observed, he established the *Gardener's Magazine*, and entered on that career of herculean mental effort already detailed; nor was it carried on without a still further shattering of his frame, for now his left hand became so disabled, that the use of only the third and little finger remained. Maimed and infirm of body, his mind retained its unabated vigour, and he had recourse to the employment of an amanuensis and draughtsman. Thus did he yield ground only inch by inch, as death advanced; and when his last hour arrived, death still found him hard at work, for 'he died standing on his feet.' Chronic inflammation of the lungs terminated his life on the 14th of December 1843. The work on which he was employed at the time of his death, is entitled *Self-instruction for Young Gardeners*, the class of persons whose interests his lifelong labours were devoted to promote. Let his faithful wife, who best knew him, and who has since followed him to the last resting-place, utter his requiem—'Never did any man possess more energy and determination; whatever he began he pursued with enthusiasm, and carried out notwithstanding obstacles that would have discouraged any ordinary person. He was a warm friend; most affectionate in all his relations of son, husband, father, and brother; and never hesitated to sacrifice pecuniary considerations to what he considered his duty.'

VEGETABLES, HERES, AND FRUITS IN ENGLAND IN THE THIRTEENTH CENTURY.

In connection with the improvements in the art of gardening, effected by Mr Loudon, the subject of the foregoing article, it may not be uninteresting to contemplate the condition of horticulture in England in the thirteenth century; and the nature

and extent of the supplies of fruit, vegetables, and similar produce procurable by our ancestors. From the roll of the household expenses of Eleanor, Countess of Leicester, third daughter of King John, and wife of the celebrated Simon de Montfort, who fell at Evesham, we gather the following curious details; this roll being the earliest known memorial of the expenditure of an English subject.

It cannot fail to be remarked, in perusing the roll, that very few esculent plants are mentioned. Dried pease and beans, parsley, fennel, onions, green-pease, and new beans, are the only species named. Pot-herbs, of which the names are not specified, cost 6d.; and here, on the authority of Mr Hardy, we may mention that one shilling then would purchase as much as fifteen now. If any other vegetables were in general use at the time, they were, perhaps, comprised under the term *potagium*. There is, however, much uncertainty upon the subject of the cultivation of vegetables, in this country, during the thirteenth and fourteenth centuries. Cresses, endive, lettuce, beets, parsneps, carrots, cabbages, leeks, radishes, and cardoons, were grown in France during the reign of Charlemagne; but it is doubtful whether many of these varieties had penetrated into England at an early period. The most skilful horticulturists of the Middle Ages were ecclesiastics, and it is possible that in the gardens of monasteries many vegetables were raised which were not in common use among the laity. Even in the fifteenth century, the general produce of the English kitchen-garden was contemptible, when compared with that of the Low Countries, France, and Italy. Gilbert Kymer can enumerate only, besides a few wild and forgotten sorts, cabbage, lettuce, spinach, beet-root, trefoil, bugloss, borage, celery, purslane, fennel, smallage, thyme, hyssop, parsley, mint, a species of turnip, and small white onions. According to him, all these vegetables were boiled with meat. He observes that some were eaten raw, in spring and summer, with olive-oil and spices, but questions the propriety of the custom. This is, perhaps, the earliest notice extant of the use of salads in England.

The roll furnishes but little information respecting fruit. The only kinds named are apples and pears; three hundred of the latter were purchased at Canterbury, probably from the gardens of the monks. It is believed, however, that few other sorts were generally grown in England before the latter end of the fifteenth century; although Matthew Paris, describing the bad season of 1257, observes that 'apples were scarce, and pears scarcer, while quinces, vegetables, cherries, plums, and all shell-fruits were entirely destroyed.' These shell-fruits were, probably, the common hazel-nut, walnuts, and perhaps chestnuts: in 1256, the sheriffs of London were ordered to buy two thousand chestnuts for the king's own use. In the Wardrobe Book of the 14th of Edward I, we find the bill of Nicholas, the royal fruiterer, in which the only fruits mentioned are pears, apples, quinces, medlars, and nuts. The supply of these from Whitsuntide to November, cost £21, 14s. 1½d.

This apparent scarcity of indigenous fruits naturally leads to the inquiry, what foreign kinds, besides those included in the term *spicery*, such as

almonds, dates, figs, and raisins, were imported into England in this and the following century. In the time of John, and of Henry III., Rochelle was celebrated for its pears, and conger-eels; the sheriffs of London purchased a hundred of the former for Henry in 1223. In the 18th of Edward I., a large Spanish ship came to Portsmouth; out of the cargo of which the queen bought one frail of Seville figs, one frail of raisins or grapes, one bale of dates, and two hundred and thirty pomegranates, fifteen citrons, and seven oranges. The last item is important, as Le Grand d'Aussy could not trace the orange in France to an earlier date than 1333; here we find it known in England in 1290; and it is probable that this was not its first appearance. The marriage of Edward with Eleanor of Castile naturally led to a greater intercourse with Spain, and, consequently, to the introduction of other articles of Spanish produce than the leather of Cordova, olive-oil, and rice, which had previously been the principal imports from that fertile country, through the medium of the merchants of Bayonne and Bordeaux.

It is to be regretted that the series of wardrobe books is incomplete, as much additional information on this point might have been derived from them. At all events, it appears certain that Europe is indebted to the Arab conquerors of Spain for the introduction of the orange, and not to the Portuguese, who are said to have brought it from China. An English dessert in the thirteenth century must, it is clear, have been composed chiefly of dried and preserved fruits, dates, figs, apples, pears, nuts, and the still common dish of almonds and raisins.

With respect to spices, the arrival of a ship laden with them was an event of such importance, and perhaps rarity, that the king usually hastened to satisfy his wants before the cargo was landed. Thus, in the reign of Henry III., the bailiffs of Sandwich were commanded to detain, upon their coming into port, two great ships laden with spices and precious merchandises, which were exported from Bayonne; and not to allow anything to be sold until the king had had his choice of their contents.

Returning to the roll, cider is mentioned only once, and in such a manner as to convey the impression that it was not in much estimation, the Countess having distributed one ton among eight hundred paupers.

ALBERT, PRINCE CONSORT.

On no occasion subsequent to the death of the Princess Charlotte of Wales, in 1817, was any royal demise so deeply lamented in England as that of Albert, Prince Consort to Queen Victoria. Born on the 26th of August 1819—only two months after the royal lady whom he was destined to espouse—he passed his early days in receiving an education unusually complete in all that could grace a prince and a gentleman, both as regards solid learning and high-bred accomplishments. He and his elder brother, Ernest Augustus, had lasting reason to be grateful for the care bestowed upon them by their father, the reigning Duke of Saxe Coburg Gotha. The two young princes visited England in 1836, while William IV. was king; and then, it is understood, took place the

interview between Albert and Victoria, which led ultimately to their union. On the return of the two brothers to Germany, both princes continued their studies with great assiduity, at various universities. Albert is believed, too, to have profited greatly during a temporary residence with his uncle, Leopold, the sagacious king of the Belgians; who, being uncle to Victoria as well as to Albert, was well fitted to instruct the young man concerning the delicate and responsible position of one who might become husband to the Queen of England. In 1839, when he was declared of age, Prince Albert came into possession of estates worth about £2500 a year: and this was all the patrimonial property which he inherited. On the 10th of October in that year, Ernest and Albert again visited England. Victoria was then Queen. Her ministers had already agreed on the suitableness of Albert as her husband, in all that concerned political, national, and religious considerations; and the graces and accomplishments of the Prince now fairly won the heart of the young Queen. It was not for an almost portionless young Prince to pay addresses to the greatest queen in Europe; nor was it an easy matter for an English maiden, at twenty, to shew her preference towards him; but one of the many memoirs of the Prince gives the *denouement* in the following form. On a certain occasion, at one of the palace balls, the Queen presented her bouquet to the Prince at the conclusion of a dance; his close uniform, buttoned up to the throat, did not permit him to place the bouquet where the Persian-like compliment would dictate; but he drew forth a penknife, ripped a hole in the breast of his coat, and placed the treasure there. On another occasion, when he was thanking the Queen for the very kind and gracious reception which he had met with in England, she replied: 'If, indeed, your Highness is so much pleased with this country, perhaps you would not object to remaining in it and making it your home.' These narrations may not either of them, perhaps, be strictly correct, but there is not a doubt that the alliance proceeded from mutual affection. On the 14th of November, Prince Albert left England; and on the 23d, at a privy council summoned for the purpose, the Queen said: 'I have caused you to be summoned, in order that I may acquaint you with my resolution in a matter which deeply concerns the welfare of my people, and the happiness of my future life. It is my intention to ally myself in marriage with Prince Albert of Saxe Coburg Gotha. Deeply impressed with the solemnity of the engagement which I am about to contract, I have not come to this decision without mature consideration, nor without feeling a strong assurance that, with the blessing of Almighty God, it will at once secure my domestic felicity, and serve the interests of my country.' By an unusual combination of circumstances, the Tory, or Church-and-King party of the day, appeared in the character of economical reformers; for they, in the House of Commons, cut down to £30,000 a year, an allowance to Prince Albert, which Viscount Melbourne's government had proposed should be £50,000. On the 24th of January 1840, the Prince was made Knight of the Garter; on the 9th of February, he arrived in England; and on the next day he became husband to Queen Victoria.

During the twenty-two years of his married

life, this exemplary man laboured incessantly to be worthy of his high position, and to foster all good and ennobling schemes. His merits were partially known to the nation during his lifetime, but never so fully as after his decease. He went through a regular course of study of the system of English law and jurisprudence, and of the rise and progress of the English constitution, under Mr Selwyn. He studied agriculture, both scientifically and practically, and became a regular exhibitor at agricultural shows. He revived the drooping Society of Arts, and made it more flourishing than it had ever been before. He was, more than any other person, the originator of International Exhibitions; and to him the world owed especially the Great Exhibition of 1851. He took a decided part in the establishment of the South Kensington Museum, and of schools of art in various parts of the country. He advocated popular education in various ways, calculated to shew the liberal tendency of his mind. He made speeches and addresses at the York and Aberdeen meetings of the British Association for the Advancement of Science, which shewed a very extensive acquaintance with science in its principles, its history, and its practical applications. He had something to say worth hearing and attending to at the Educational, Statistical, and Social Science Congresses. He was the promoter of a new branch or department of the Order of the Bath, designed to recognise civil in addition to military and naval merit. He might, at one time, have become commander-in-chief of the Queen's armies; but his own appreciation of the delicate position which he occupied towards her Majesty—at once a husband and a subject—led him to decline the honour, although urged to accept it by the Duke of Wellington. There were two or three occasions in his life when he was a little misunderstood; especially in 1851 and 1854, during political discussions, which led many persons to accuse him of using 'German' influence injurious to English interests; but the leaders of both parties, in and out of office, uniformly acknowledged the purity of his intentions, and the care with which he sought always to keep strictly within the constitutional limits of his position.

Such was the Prince whose death, on the 14th of December 1861, was a source of great national grief.

Mr Tennyson published a new edition of his *Idylls of the King* a few weeks after the death of the Prince; to whose memory he dedicated it in lines which are likely to take a permanent place in the poetry of this country. In the following extract, the leading characteristics of the Prince's mind are well set forth:

'He seems to me
Scarce other than my own ideal knight,
"Who revered his conscience as his king;
Whose glory was, redressing human wrongs;
Who spake no slander, no, nor listen'd to it;
Who lov'd one only and who clave to her"—
Her, over all whose realms to their last isle,
Commingled with the gloom of imminent war,
The shadow of His loss moved like eclipse,
Darkening the world. We have lost him: he is gone:
We know him now: all narrow jealousies
Are silent; and we see him as he moved,
How modest, kindly, all-accomplish'd, wise,
With what sublime repression of himself,
And in what limits, and how tenderly;

696

Not swaying to this faction or to that;
Not making his high place the lawless perch
Of wing'd ambitions, nor a vantage-ground
For pleasure; but through all this tract of years
Wearing the white flower of a blameless life,
Before a thousand peering littlenesses,
In that fierce light which beats upon a throne,
And blackens every blot: for where is he,
Who dares foreshadow for an only son
A lovelier life, a more unstain'd, than his?
Or how should England, dreaming of his sons,
Hope more for these than some inheritance
Of such a life, a heart, a mind, as thine,
Thou noble father of her kings to be,
Laborious for her people and her poor—
Voice in the rich dawn of an ampler day—
Far-sighted summoner of War and Waste
To fruitful strifes and rivalries of peace—
Sweet nature gilded by the gracious gleam
Of letters, dear to science, dear to art,
Dear to thy land and ours, a Prince indeed,
Beyond all titles, and a household name,
Hereafter, through all times, Albert the Good.'

And the closing lines, addressed to the royal widow, are equally beautiful:

'Break not, O woman's heart, but still endure;
Break not, for thou art royal, but endure,
Rememb'ring all the beauty of that star
Which shone so close beside thee, that ye made
One light together, but has past and left
The crown a lonely splendour.

May all love,
His love, unseen but felt, o'ershadow thee,
The love of all thy sons encompass thee,
The love of all thy daughters cherish thee,
The love of all thy people comfort thee,
Till God's love set thee at his side again.'

THE 'SACHEVERELL' FERMENT IN QUEEN ANNE'S TIME.

The effect of particular sermons has often been remarked upon in rousing the feelings of large multitudes of persons, but it seldom extended far beyond the immediate hearers; this of Dr Sacheverell's, however, rung through the whole nation; little else was spoken of for months, and in its consequences it influenced a general election, and turned out the Whig ministry. The preacher, Henry Sacheverell, was descended from a good Derbyshire family, who had taken part with the Puritans, and struggled for the very principles which the subject of the present memoir so warmly opposed; but his father had become a clergyman of the Church of England, and held the living of Marlborough, where his son Henry was born in the year 1672. The father dying in poverty, and leaving a large family, Henry was adopted by a Mr Hearst, who sent him to Magdalen College, Oxford, where he became the intimate friend of Addison, gained a fellowship, and was celebrated as a college tutor. Thus when, in after-days, we find him spoken of as an ignorant, bombastical fellow, 'who had not learning enough to write or speak true English;' and we are informed that the learned doctors of the university of Oxford, in holding a high-feast to welcome their champion after his trial, were soon disgusted at his unspeakable ignorance, we cannot help suspecting that these accounts must have arisen from the violence of party-spirit. It is said that he

began life as a Whig, but not getting the promotion he wanted, he became a Tory, and, like all renegades, poured out boundless abuse on his late friends. In 1705, he was presented to the living of St Saviour's, Southwark, where his loud voice, great impudence, and graceful, well-dressed person, gained him many admirers. The popular cry at the time was, that the church was in danger from the wickedness of the ministry, and Sacheverell, taking up the cry, seized the opportunity, when preaching the assize sermon at Derby, on 15th August 1709, of making a violent attack on the government; and again, on the 5th of November, when addressing the corporation of London in St Paul's Cathedral, he chose for his text: 'Perils from false brethren,' and used the expression, 'the crafty insidiousness of such wily Volpones,' which was then a popular nickname for Godolphin, the lord treasurer. Foaming at the mouth, and striking the pulpit with his clenched hand, he denounced the bishops who approved of toleration to dissenters, and the supporters of the Revolution as men who had committed the unpardonable offence. The corporation gave their thanks, as usual, for the sermon, and do not generally seem to have been aware of the treason they had been listening to; but when the sermon was printed, and the Tories praised it up to the skies, setting no less than forty thousand copies in circulation, the ministry took alarm, and Marlborough and Godolphin urged an impeachment. In the following month of December, the House of Commons passed a resolution denouncing both this and the previous discourse, delivered by Sacheverell at Derby, as 'malicious, scandalous, and seditious libels, highly reflecting upon her majesty and government, the late happy revolution, and the Protestant succession as by law established, and both Houses of parliament, tending to alienate the affections of her majesty's good subjects, and to create jealousies and divisions among them.' The author and printer of the discourses in question were at the same time ordered to attend at the bar of the House, a command which was complied with by them on the following day (14th December); and thereupon a motion was made and carried that Sacheverell should be impeached of high crimes and misdemeanours. In the meantime, the people were roused to the greatest excitement by the High-Church party, who asserted that the Puritans were regaining the ascendancy, the Whigs would pull down the church, and Sacheverell was to be prosecuted in order to try their strength; money and strong-ale gained them numerous partisans among the lower orders.

After some delays, the trial began on the 27th of February 1710. When the doctor had previously made his appearance in the House of Commons, he was accompanied by no less than one hundred of the most eminent clergymen in London; but the House of Lords determined that Westminster Hall would be a more suitable place for the trial than their own house; and that had been prepared with greater show than perhaps was necessary. The queen had her box near the throne, and attended as a private individual; numbers of ladies, of every station, crowded to support their favourite preacher; and the populace rushed in such numbers, that it was much feared the galleries would give way. Out of doors, the scene was no less striking; London had been in a sort of riot ever since the arrest of

Sacheverell; the lowest of the people were his greatest supporters; butchers' boys, chimney-sweeps, costermongers, formed his body-guard, and the respectable citizens wished the trial well over, so much did they dread that the drunken and riotous crowd would find vent for their passions in setting fire to their houses and murdering the Whigs. The subject of all this uproar entered the hall, attended by Dr Atterbury and Dr Smalridge, and inflated with his own importance in no small degree; the old Duchess of Marlborough declaring 'that his clean gloves, good assurance, and white handkerchief well-managed, moved the hearts of many at his appearance.' Four articles of impeachment were brought against him, and Robert Walpole distinguished himself much by the speech he made in support of them. Sacheverell made a speech in his own defence: 'exquisitely contrived to move pity, full of impious piety, denying the greatest part of the charge, with solemn appeals to God and such applications of Scripture as would make any serious person tremble;' whilst the beautiful daughter of the Duchess of Marlborough, who thus writes, was so much affected at his calling God to witness what was a falsehood, that she burst into tears; but other noble ladies sympathised with the accused, and saw a halo of truth and innocence around the head of the injured priest.

The doctor's return home, after the first day's trial, was one continued ovation; but on the evening of the second day, the riot broke out by the pillaging and burning of some dissenting chapels; a bonfire was made in Lincoln's Inn Fields, of the books and cushions, the mob shouting around: 'High Church and Sacheverell!' Bishop Burnet, who was well known for his tolerant views, and had been denounced by Sacheverell, had a narrow escape; the mob rushed upon his house, but some of the guards arrived in time to save it. There was a movement upon the bank; happily the mob was cowardly, and dispersed as soon as the troops appeared; no blood was shed, but it was generally believed that many gentlemen, in disguise, directed and encouraged the people; the queen was suspected of being on their side, and on one of the days of the trial, as she was on her way to Westminster, they gathered round her chair, shouting: 'God bless your majesty and the church; we hope your majesty is for Dr Sacheverell.' On the 20th of March, the trial came to an end; the doctor was found guilty by a majority of sixty-eight to fifty-two; three days after, he was placed on his knees at the bar, and the lord chancellor pronounced this judgment: 'You, Henry Sacheverell, are enjoined not to preach during the term of three years next ensuing, and your two printed sermons shall be burned before the Royal Exchange, at one of the clock in the afternoon, by the common hangman, in the presence of the lord mayor and sheriffs of London.' As this very mild sentence was considered equivalent to an acquittal, the illuminations and rejoicings were on a splendid scale, and every passer-by was compelled to drink to the health of the popular champion. He, on his side, was more inflated with vanity than ever; his vulgar attendants huzzaed him through the streets like a successful parliamentary candidate. For some days, he employed himself in calling upon those noblemen who had voted in his favour; but the Duke of

Argyle refused him admittance, desiring his servant to tell him that what he did in parliament was not done for his sake. On the other hand, Lord Weymouth presented him with fifty pounds, and many gifts were sent to him. After exhausting the enthusiasm of the metropolis, he set off on a sort of progress through the kingdom; Oxford, as the focus of high-churchism, or as the Whigs called it, 'the nursing-place of slavery,' was loud in its approbation and warm in its reception; in every town feasts were provided, and, strange to say, when a clergyman was in the case, drunkenness prevailed; three bottles and a magnum were pure orthodoxy, and since the restoration of Charles II., such scenes had not been witnessed. Sacheverell was received by the mayors, and escorted by a mounted train; garlands and flags adorned the streets, and medals, with his picture engraved, were struck.

Happily, after a few weeks, people recovered their senses, and acknowledged the justice of the Duchess of Marlborough's remark: 'Oh, what dreadful things do we undergo for the sake of the church!' At Ely, the doctor was pelted with stones and curses; and on wishing to make a speech to the Company of the Bank of England, the directors ordered him to be turned out: nevertheless, the affair had a most powerful influence on the elections, and the Tory ministry were brought back to their places. The living of Salatin, in Shropshire, was presented to him; and a month after the three years' suspension had expired, the queen, who at heart was always on his side, gave him the valuable living of St Andrews, Holborn. Like many who owe their popularity to circumstances rather than any merit of their own, Sacheverell dropped into private life, and nothing worthy of note is told of him, but that his quarrels with his parishioners were by no means unfrequent; just what might be expected from so pugnacious a disposition. He inherited a considerable fortune, and died on the 5th of June 1724, having lived in comfort and affluence during his later years.

DECEMBER 15.

St Eusebius, bishop of Vercelli, 371.

Born.—George Romney, portrait painter, 1734, *Dalton, Lancashire*; Jerome Bonaparte, youngest brother of Napoleon, 1784, *Ajaccio*.

Died.—Timoleon, liberator of Syracuse, 337 B.C.; Pope John VIII., 82 A.D.; Izaak Walton, author of *The Complete Angler*, 1683, *Winchester*; George Adam Struvius Jurist, 1692, *Jena*; Benjamin Stillingfleet, naturalist, 1771, *Westminster*; Jean Baptiste Carrier, revolutionary terrorist, guillotined, 1794; Mrs Sarah Trimmer, authoress of juvenile and educational works, 1810, *Brentford*; David Don, botanist, 1841, *London*; Leon Faucher, eminent French statesman and publicist, 1854, *Marseille*.

WILLIAM HOGARTH.

Were it desired to select from the distinguished men of Great Britain, one who should approach most nearly to the type of the true-born Englishman, with all his uprightness and honesty, his frank-hearted vivacity and genial joviality of temperament, and,

at the same time, his roughness, obstinacy, and inveteracy of prejudice, no fitter representative of such aggregate qualities could be obtained than William Hogarth, our great pictorial moralist. Repulsive and painful as many of his subjects are, seldom exhibiting the pleasing or sunny side of human nature, their general fidelity and truthfulness commend themselves alike to the hearts of the most illiterate and the most refined, whilst the impressive, if at times coarsely-expressed, lessons which they inculcate, place the delineator in the foremost rank of those who have not inaptly been termed 'week-day preachers.'

With the exception of two memorable excursions—one with a company of friends to Rochester and Sheerness, and another to Calais—Hogarth's life appears to have been almost exclusively confined to London and its immediate vicinity. His father, Richard Hogarth, was the youngest son of a Westmoreland yeoman, who originally kept a school at St Bees, in Cumberland, but came up when a young man to London, and settled as a schoolmaster in Ship Court, in the Old Bailey. He married and had three children—William, afterwards the celebrated artist, and two girls, Mary and Anne.

Young Hogarth, having early shewed a turn for drawing, was bound apprentice to a silversmith, and initiated in the art of engraving arms and cyphers on plate. The employment did not satisfy the aspirations of his genius, and he accordingly, on the expiration of his indentures, entered Sir James Thornhill's academy, in St Martin's Lane, where he occupied himself in studying drawing from the life. In the mere delineation, however, of the external figure, irrespective of the exhibition of character and passion, Hogarth never acquired any great proficiency. During the first years of his artistic career, he supported himself by engraving arms and shop-bills; and then gradually ascending in the professional scale, he turned his attention successfully to portrait-painting, and in the course of a few years derived both a considerable income and reputation from this source. An amusing and characteristic anecdote of him is related in connection with this period of his life. A certain nobleman, remarkable for ugliness and deformity, employed Hogarth to paint his picture—a behest which the artist executed with only too scrupulous fidelity. The peer was disgusted at so correct a representation of himself, and refused to take or pay for the picture. After numerous ineffectual negotiations with his lordship on the subject, Hogarth addressed him the following note: Mr Hogarth's dutiful respects to Lord —; finding that he does not mean to have the picture which was drawn for him, is informed again of Mr Hogarth's pressing necessities for the money. If, therefore, his lordship does not send for it in three days, it will be disposed of, with the addition of a tail and some other appendages, to Mr Hare, the famous wild-beast man; Mr H. having given that gentleman a conditional promise on his lordship's refusal.' The ruse was successful; the price agreed on was paid for the picture, which was forthwith destroyed.

Having attained the age of thirty-three, Hogarth contracted, in 1730, a secret marriage with the only daughter of the celebrated painter, Sir James Thornhill, who was at first extremely indignant at the match. He afterwards, however, relented,

and lived till his death in great harmony with his son-in-law.

With the publication of the 'Harlot's Progress,' in 1733, Hogarth commenced those serial prints which have rendered his name immortal. From the first, his success in this department of art was assured. The 'Harlot's Progress' was followed, after the interval of two years, by the still more famous 'Rake's Progress,' and this again by the series of 'Marriage à la Mode,' 'Industry and Idleness,' the 'Stages of Cruelty,' and the 'Election Prints.' Numerous other individual pieces might be mentioned, such as the 'March to Finchley,' which excited the wrath of George II., by the ludicrous light in which his soldiers were presented; 'Modern Midnight Conversation,' 'Strolling Players in a Barn,' and 'Beer Street,' and 'Gin Lane;' the former a plea for the liquor which Hogarth, like a true Englishman, deemed the most wholesome and generous beverage; the latter, a fearfully repulsive, but at the same time salutary delineation of the dreadful miseries resulting from the abuse of ardent spirits. To another picture by Hogarth, 'The Gate of Calais,' a curious anecdote is attached. He had made an excursion thither with some friends, but with the determination apparently to find nothing in France either pleasing or commendable. Like Smollett, Hogarth seems to have entertained a thorough contempt for the French nation, and he was unable to refrain from giving vent to his sentiments even in the open street. The lank and grotesque figures which presented themselves everywhere, and by their appearance gave unmistakable evidence of the poverty and misery of the country, under the old *régime*, called forth all his powers of ridicule; whilst the light-heartedness and vivacity with which, like the Irish, the French people could forget or charm away their wretchedness, raised only to a higher pitch his feeling of contempt. Very speedily and summarily, however, he himself was obliged to quit the country which he so heartily despised. Ignorant of foreign jealousies on the subject of bulwarks and fortifications, he began to make a sketch of the gate of Calais, as a curious piece of architecture. This action being observed, he was arrested as a spy, and conveyed by a file of musketeers before the governor of the town. There his sketch-book was examined, but nothing whatever was discovered to warrant the suspicion entertained against him. The governor, however, assured him with the utmost politeness, that were it not for the circumstance of the preliminaries of a treaty of peace having actually been signed between England and France, he should have been under the disagreeable necessity of hanging Mr Hogarth on the ramparts of Calais. As it was, he must insist on providing him with a military escort whilst he continued in the dominions of Louis XV. The discomfited artist was then conducted by two sentinels to his hotel, and from thence to the English packet in the harbour. Hogarth's guard of honour accompanied him to the distance of about a league from the shore, and then seizing him by the shoulders, and spinning him round upon the deck, they informed him that he was now at liberty to pursue his voyage without further molestation. Hogarth reproduced this adventure in the print above referred to, where, in addition to the grotesque figures who fill up the centre and foreground of

the picture, he himself is delineated standing in a corner, and making a sketch of the gateway of the town, whilst the hand of a sentinel is in the act of being laid on the artist's shoulder. Though he thus perpetuates the recollection of the circumstance, it is said that he never liked to hear any reference to the mortifying incident that ensued. In a letter from Horace Walpole to Sir Horace Mann, dated 15th December 1748, this misadventure of Hogarth is communicated as a piece of news which had just transpired.

Hogarth's prints are thus admirably epitomised by Mr Thackeray in his *English Humorists*: 'They give us the most complete and truthful picture of the manners, and even the thoughts, of the past century. We look, and see pass before us the England of a hundred years ago—the peer in his drawing-room, the lady of fashion in her apartment, foreign singers surrounding her, and the chamber filled with gewgaws in the mode of that day; the church, with its quaint florid architecture and singing congregation; the parson with his great wig, and the beadle with his cane: all these are represented before us, and we are sure of the truth of the portrait. We see how the lord mayor dines in state; how the prodigal drinks and sports at the bagnio; how the poor girl beats hemp in Bridewell; how the thief divides his booty, and drinks his punch at the night-cellar, and how he finishes his career at the gibbet. We may depend upon the perfect accuracy of these strange and varied portraits of the bygone generation; we see one of Walpole's members of parliament chaired after his election, and the lieges celebrating the event, and drinking confusion to the Pretender; we see the grenadiers and trainbands of the city marching out to meet the enemy; and have before us, with sword and firelock, and white Hanoverian horse embroidered on the cap, the very figures of the men who ran away with Johnny Cope, and who conquered at Culloden. The Yorkshire wagon rolls into the inn-yard; the country parson, in his jack-boots, and his bands and short caskock, comes trotting into town, and we fancy it is Parson Adams, with his sermons in his pocket. The Salisbury fly sets forth from the old "Angel"—you see the passengers entering the great heavy vehicle, up the wooden steps, their hats tied down with handkerchiefs over their faces, and under their arms, sword, hanger, and case-bottle; the landlady—apoplectic with the liquors in her own bar—is tugging at the bell; the hunchbacked postilion—he may have ridden the leaders to Humphry Clinker—is begging a gratuity; the miser is grumbling at the bill; Jack of the Centurion lies on the top of the clumsy vehicle, with a soldier by his side—it may be Smollett's Jack Hatchway—it has a likeness to Lesmahago. You see the suburban fair, and the strolling-company of actors; the pretty milkmaid singing under the windows of the enraged French musician—it is such a girl as Steele charmingly described in the *Guardian*, a few years before this date, singing, under Mr Ironside's window in Shire Lane, her pleasant carol of a May morning. You see noblemen and blacklegs bawling and betting in the cock-pit; you see Garrick as he was arrayed in *King Richard*; Macheath and Polly in the dresses which they wore when they charmed our ancestors, and when noblemen in blue ribbons sat on the stage, and listened to their delightful music. You

see the ragged French soldiery, in their white coats and cockades, at Calais Gate—they are of the regiment, very likely, which friend Roderick Random joined before he was rescued by his preserver, Monsieur de Strap, with whom he fought on the famous day of Dettingen. You see the judges on the bench; the audience laughing in the pit; the student in the Oxford theatre; the citizen on his country-walk; you see Broughton the boxer, Sarah Malcolm the murderess, Simon Lovat the traitor, John Wilkes the demagogue, leering at you with that squint which has become historical, and that face which, ugly as it was, he said he could make as captivating to woman as the countenance of the handsomest beau in town. All these sights and people are with you. After looking in the *Rule's Progress* at Hogarth's picture of St James's Palace-gate, you may people the street, but little altered within these hundred years, with the gilded carriages and thronging chairmen that bore the courtiers, your ancestors, to Queen Caroline's drawing-room, more than a hundred years ago.

Hogarth was not only a painter and an engraver, but likewise an author, having published, in 1753, a quarto volume, entitled the *Analysis of Beauty*, in which he maintains the fundamental principle of beauty to consist in the curve or undulating line, and that round swelling figures are the most attractive to the eye. This idea appears to have been cherished by him with special complacency, as in that characteristic picture which he painted of himself and his dog Trump, and of which a

WILLIAM HOGARTH.

copy is here engraved, he has inscribed, in association with the curve, 'The Line of Beauty and Grace,' as his special motto.

A very curious and interesting memorial of

Hogarth and his associates, exists in the narration of a holiday excursion down the river as far as Sheerness. Though Hogarth himself is not the chronicler, we are favoured, by one of the party, with a most graphic description of this merry company, who seem to have enjoyed their trip with all the zest of school-boys or young men 'out on a lark.' Hogarth acted as draughtsman, making rough sketches of many of the incidents of the journey, which seems to have been as jovial an expedition as good-humour, high spirits, and beer, could have contributed to effect.

One of the members of this party was Hogarth's brother-in-law, John Thornhill, who afterwards became sergeant-painter to the king, but resigned his office in favour of Hogarth in 1757. It has been imagined that this connection with the court, in his latter years, led the artist into that pictorial warfare with Wilkes and Churchill, in which certainly no laurels were gathered by any of the parties engaged. Hogarth's health began now visibly to decline, and after languishing in this state about two years, he expired suddenly, of aneurism in the chest, on 25th October 1764. He was interred in the churchyard at Chiswick, where a monument, recently restored, was erected to his memory. He never had any family, and was survived for twenty-five years by his wife, who died in 1789.

The Society of the Piu.

At the beginning of the fourteenth century, London contained many foreigners, whose business it was to frequent the various fairs and markets held in England, and with whom their idle time hung heavily for want of some congenial amusement. To meet this want, they formed a semi-musical, semi-friendly association, called the Company or Brotherhood of the Piu—'in honour of God, our Lady Saint Mary, and all saints both male and female; and in honour of our lord the king, and all the barons of the country.' Both the name and nature of the association were derived from similar societies then existing in France and Flanders, which are supposed to have taken their titles from the city of Le Puy, in Auvergne, a city rejoicing in the possession of a famous statue of the Virgin, popular with the pilgrims of the age.

The rules and regulations of the London society are preserved in the *Liber Custumarum*, one of the treasures of the Guildhall library. From these we learn that the avowed object of the loving companions of the Piu, was to make London renowned for all good things; to maintain mirth, peace, honesty, joyousness, and love; and to annihilate wrath and rancour, vice and crime. The brotherhood, which was not confined to foreigners, consisted of an unlimited number of members, each of whom paid an entrance-fee of sixpence, and an annual subscription of one shilling, towards the expenses of the yearly festival. The management of the society's affairs was intrusted to twelve companions, who held office till removed by death or their secession from the brotherhood, but the president or prince, as he was called, was changed every year. Any member was eligible to serve, and none could decline the office if chosen by the outgoing prince—his choice being ratified by eleven

of the twelve companions declaring him, upon oath, to be 'good, loyal, and sufficient.' The expense entailed by accepting the honour was not very burdensome, consisting merely in paying for the official costume, 'a coat and surcoat without sleeves, and mantle of one suit, with whatsoever arms he may please.' The crown was provided by the society at the cost of one mark, and was passed from one prince to another. The only other officers were a clerk to keep the accounts, register the names of the members, and summon them to the meetings of the company; and a chaplain, 'at all times singing mass for living and dead companions.'

To suit the convenience of the mercantile community, the great festival of the Piu was held on the first Sunday after Trinity, in a room strewn with fresh rushes, and fairly decked with leaves. As soon as the company were assembled, the investiture of the new prince took place, with the following simple ceremony: 'The old prince and his companions shall go through the room, from one end to the other, singing; and the old prince shall carry the crown of the Piu upon his head, and a gilt cup full of wine in his hands. And when they shall have gone round, the old prince shall give to drink unto him whom they shall have chosen, and shall give him the crown, and such person shall be prince.' The blazon of the new chief's arms were then hung in a conspicuous place, and the most important business of the day commenced.

This was the choosing of the best song. The competitors—who were exempted from paying the festival-fee—were ranged on a seat covered with cloth of gold, the only place allowed to be so decorated. The judges were the two princes and a jury of fifteen members, who took an oath not to be biased in their judgment, 'for love, for hate, for gift, for promise, for neighbourhood, for kindred, or for any acquaintanceship old or new, nor yet anything that is.' Further to insure the prize being properly awarded, it was decreed that, 'there be chosen two or three who well understand singing and music, for the purpose of trying and examining the notes, and the points of the songs, as well as the nature of the words composed thereto. For without singing, no one ought to call a composition of words, a song; nor ought any royal song to be crowned without the sweet sounds of melody sung.' When the song had been chosen, it was hung beneath the arms of the prince, and its author crowned. Then dinner was served, each guest receiving good bread, ale and wine, pottage, one course of solid meat, double roast in a dish, cheese, 'and no more.' At the conclusion of this moderate banquet, the whole company rose, mounted their horses, and went in procession through the city, headed by the princes past and present, between whom rode the musical champion of the meeting. On arriving at the house of the new prince, the brethren dismounted, had a dance 'by way of a hearty good-bye,' and departed homeward on foot.

None but members of the company were invited to the festival, and ladies were especially excluded from taking part in it, by a clause which is a curiosity in its way, as a gallant excuse for an ungallant act. It runs thus: 'Although the becoming pleasantries of virtuous ladies is a rightful

theme and principal occasion for royal singing, and for composing and furnishing royal songs, nevertheless it is hereby provided that no lady or other woman ought to be at the great feast of the Piu, for the reason that the companions ought hereby to take example and rightful warning to honour, cherish, and commend all ladies, at all times, in all places, as much in their absence as in their presence.'

The day after the feast a solemn mass was sung at the priory of St Helen's for the souls of all Christian people in general, and those of the brotherhood in particular. The accounts were audited, and any surplus left, added to the treasury of the company; if the expenses of the feast exceeded the receipts, the difference was made good by contributions from the members. The names of absentees in arrears were published, and those who had neglected paying their subscription for seven years were expelled the society, the same sentence being passed against evil-minded companions, respecting whom there was this emphatic statute: 'If there be any one who is unwilling to be obedient to the peace of God, and unto the peace of our lord the king—whom God preserve—the community of the companions do not wish to have him or his fees, through whom the company may be accused or defamed.'

Members were also expected to attend at the wedding or funeral of a brother, and were furthermore enjoined always to aid, comfort, and counsel one another in faith, loyalty, peace, love, and concord as brethren in God and good love.

NEGRO AUTHORS.

There are so very few instances on record of any of the pure African negro race exhibiting a taste or ability for literary composition, that their names seem not unworthy of notice in this collection. First in the list stands Ignatius Sancho, who was born in 1729, on board of a slave-ship, a few days after leaving the coast of Guinea, for the Spanish-American colonies. At Cartagena, he was christened Ignatius; his mother died soon after, and his father, unable to survive her, avoided the miseries of slavery by suicide. When two years of age, Ignatius was brought to England, and given by his owner as a present to three elderly maiden-sisters, residing near Greenwich. These ladies, having just previously read *Don Quixote*, gave their little slave the name of Sancho; but, however fond of reading themselves, they denied that advantage to Ignatius, believing that ignorance was the only security for obedience; that to cultivate the mind of their slave, was equivalent to emancipating his person. Happily, the Duke of Montague, then residing at Blackheath, near Greenwich, saw the little negro, and admired in him a native frankness of manner, as yet unimpaired by servitude, if unrefined by education. Learning that the child was trying to educate himself, the duke lent him books, and strongly recommended to his three mistresses the duty of cultivating a mind of such promising ability. The ladies, however, remained inflexible; it was of no use to educate the lad, they said, as they had determined to send him back to West Indian slavery. At this crisis, the duke died; and, the duchess declining to interfere between the

negro-lad and his mistresses, Sancho, in the immediate prospect of being sent away, fell into a state of despair. With four shillings, all the wealth he possessed, he bought a pistol, and threatened to follow the example of his father. The ladies, now terrified in their turn, gave up all claim to their slave, and he was taken into the service of the Duchess of Montague. In this family Sancho served, principally in the capacity of butler, for many years, till corpulence and gout rendered him unfit for duty. He then set up a small grocer's shop, and by care and industry gained a decent competence to support his family till his death, which took place on the 15th of December 1780.

Sancho corresponded with many notabilities of his day, such as Sterne, Garrick, and the few persons who then took an interest in the abolition of the slave-trade. His letters were published after his death, edited by a Miss Crewe, who, as she says, did not give them to the public till she had obviated an objection which had been advanced, that they were originally written with the view of publication. She declares that no such idea was ever entertained by Sancho; that not one letter was printed from a copy or duplicate preserved by himself, but all collected from the various friends to whom he had written them. She also adds, that her reasons for publishing them, were her desire of shewing that an African may possess abilities equal to a European; and the still superior motive of serving a worthy family. In this undertaking Miss Crewe had the happiness of finding that the world was not inattentive to the voice of obscure merit. The first and second editions of Sancho's letters produced £500 to his widow and family, and the writer has seen a fifth edition, published more than twenty years after his death, by his son, William Sancho, then a respectable bookseller in Westminster.

Attobah Cugoana, a Fantin negro, was carried as a slave to Grenada, when quite a child. Meeting with a benevolent master, he was subsequently liberated and sent to England, where he entered the service of Mr Cosway, the celebrated portrait-painter. Little is known of this negro's history, though it would seem that he was a much abler man than Sancho, with less advantages of education and the assistance of influential friends. He was the author of a work of considerable celebrity in its day, entitled *Thoughts and Sentiments on the evil and wicked Traffic of the Slavery and Commerce of the Human Species: Humbly submitted to the Inhabitants of Great Britain*. This is certainly an ably composed book, containing the essence of all that has been written against slavery from a religious point of view; and though the matter is ill arranged, and some of the arguments scarcely logical, it was translated into French, and obtained great consideration among the continental philanthropists.

Another interesting example of literary distinction achieved by what Thomas Fuller, with a quaintness and benevolence of phrase peculiarly his own, styles 'God's image cut in ebony,' is afforded by Phillis Wheatley, an African negress, who, when about seven years of age, was brought to Boston as a slave in 1761. She was purchased by a respectable merchant, named Wheatley, who had her christened Phillis, and, according to custom, her master's surname was bestowed on her. She never

received any instruction at school, having been taught to read by her master's family; the art of writing she acquired herself. Phillis composed a small volume of poems, which was published in her nineteenth year. Like many others of her race, she vainly hoped that the quarrel between the mother-country and the American colonies would be beneficial to African freedom; that when independence was gained by the white man, the black would be allowed some share in the precious boon. In a poem on *Freedom*, addressed to the Earl of Dartmouth, the secretary of state for the colonies, she thus writes—

'Should you, my lord, while you pursue my song,
Wonder from whence my love of freedom sprung,
Whence flow those wishes for the common good,
By feeling hearts alone best understood—
I, young in life, by seeming cruel fate,
Was snatched from Afric's fancied happy seat.
What pangs excruciating must molest,
What sorrows labour in my parent's breast?
Steeld was that soul, and by no misery moved,
That from a father seized the babe beloved.
Such, such my case—and can I then but pray,
Others may never feel tyrannic sway?'

Phillis married a person of her own complexion, a tradesman in comfortable circumstances in Boston. Her married life was unhappy. From the notice bestowed on Phillis by persons of station and influence, her husband, with the petty jealousy common to his race, felt hurt that his wife was respected more than himself. In consequence, he behaved to her harshly and cruelly, and she, sinking under such treatment, died in her twenty-sixth year, much regretted by those capable of appreciating her modest talents and virtues.

DECEMBER 16.

St Ado, archbishop of Vienne, confessor, 875. St Alice or Adelaide, empress of Germany, 999.

Born.—John Selden, lawyer and politician, 1584, *Salvington, Sussex*; George Whitefield, celebrated preacher, 1714, *Bell Inn, Gloucester*; Elizabeth Carter, distinguished literary lady, 1717, *Deal*; Chrétien Guillaume Lamoignon de Malesherbes, minister and defender of Louis XVI., 1721, *Paris*; Bernard, Comte de Lacépède, eminent naturalist, 1756, *Agen*; Jane Austen, novelist, 1775, *Steventon, Hampshire*; Carl Maria Von Weber, composer of *Der Freischütz*, 1786, *Eutin, in Holstein*.

Died.—Sir William Petty, eminent political economist, 1687, *Westminster*; Abbé Desfontaines, translator of Virgil and Horace, 1745; Thomas Pennant, naturalist, 1798, *Downing, Flintshire*; Antoine François de Fourcroy, distinguished French chemist, 1809; Rev. Samuel Lee, orientalist, 1852, *Barley, Herts*; Wilhelm Grimm, writer of fairy tales, &c., 1859, *Berlin*.

SIR WILLIAM PETTY.

In the small town of Romsey or Rumsey, in Hampshire, William Petty, the son of a humble tradesman, was born in 1623. Like Franklin, the boy took great delight in watching artificers working at their various occupations, and when little more than twelve years of age, he acquired a facility and dexterity in handling tools, which

proved of great advantage to him in after-life. At the age of fifteen, having mastered all the education afforded by the grammar-school of Rumsey, Petty proceeded to the college of Caen, in Normandy. An orphan, without patrimony or patron, the young student took a small venture of English goods with him to France, and during the four years he remained at college there, he supported himself by engaging in trade. Josiah Wedgewood used to say, that there was no pleasanter occupation than making money by honourable industry; and Petty always alleged that making money was the very best kind of employment to keep a man out of mischief. Having acquired French, mathematics, astronomy, and navigation, Petty returned to England and entered the sea-service; but being reproved for not reporting a certain landmark he was ordered to look out for, he discovered, for the first time, that he was near-sighted, and, in consequence, determined to abandon the sea. In the very curious autobiographical preamble Petty attached to his will, we learn that when he gave up the sea-service, his whole fortune consisted of sixty pounds. Having chosen medicine as his future profession, he went and studied at Leyden, Utrecht, Amsterdam, and Paris. At the last place he devoted his attention particularly to anatomy, the subsequently celebrated Hobbes being his class-fellow. Petty, during this sojourn on the continent, supported and educated a younger brother named Anthony, and was sometimes so reduced, that in Paris he is said to have lived for two weeks on three penny-worth of walnuts. His ingenuity and industry extricated him from such difficulties, and he very probably exercised his favourite method of keeping out of mischief; for when he and his brother returned to England, after a three years' absence, and all charges of travel, subsistence, and education, for two persons had been paid, Petty's sixty pounds, instead of being diminished, had increased to seventy.

He then invented an instrument for double writing, which seems to have been merely a copying-machine. Four years afterwards, he obtained the degree of Doctor of Medicine. His seventy pounds were then reduced to twenty-eight; but being appointed to the professorship of anatomy at Oxford, and the Readership of Gresham College, in two more years he was worth four hundred pounds. And then, being appointed physician to the army in Ireland, with an outfit of one hundred pounds, he went to that country with five hundred pounds at his command, and a salary of one pound per day, in addition to which he soon acquired a private practice of four hundred pounds per annum.

The tide which bore him to fortune, was the appointment of physician to the army in Ireland. This, however, was no mere lucky accident. Petty, by hard industry, rigid economy, and great ingenuity, had prepared himself to take advantage of such a flood, to swim and direct his course upon it at pleasure, not to be swept away by it. His reputation as a man of great ability obtained the appointment. A contemporary writer tells us, that 'the war being nearly ended in Ireland, many endeavours were used to regulate, replant, and reduce that country to its former flourishing condition, as a place most wanting such contrivances

as tended to the above-mentioned ends, and for which Dr Petty had gained some reputation in the world.'

The state of Petty's money-affairs, previous to and on his arrival in Ireland in 1652, as above detailed, are taken from his will, and we find, from the same document, that by undertaking contracts, speculating in mines, ships, and timber, 'making advantageous bargains,' and 'living within his income,' in the course of thirty-five years, he had increased his store to a fortune of £15,000 per annum.

Petty is best known by his admirable survey of Ireland. Soon after his arrival in that country, observing that the admeasurement and division of the forfeited estates, granted to the Cromwellian soldiery, was very much mismanaged, he applied and obtained a contract for the execution of this important work, which he performed not more for his own advantage than that of the public. The maps of this survey, comprising a large proportion of the kingdom, were all drawn by Petty, and entitled by him the 'Down Survey,' from the trivial, though in one sense important, reason, that all was laid down on paper. And, considering the time and circumstances in which these maps were executed, their accuracy is surprising, and they continue to be referred to as trustworthy evidence in courts of law even at the present day.

The changes of governments and parties, appeared rather to have contributed to the success in life, than to the discomfiture of this remarkable man. He was secretary to Henry Cromwell, when lord-lieutenant of Ireland, and sat in Richard Cromwell's parliament, as member for West Looe, in Cornwall; yet, at the Restoration, he received the honour of knighthood from Charles II. That model of an English gentleman, Evelyn, who knew Petty well, thus speaks of him:

'The map of Ireland, made by Sir William Petty, is believed to be the most exact that ever yet was made of any country. There is not a better Latin poet living, when he gives himself that diversion; nor is his excellence less in council and prudent matters of state; but he is so exceeding nice in sifting and examining all possible contingencies, that he adventures at nothing that is not demonstration. There were not in the whole world his equal, for a superintendent of manufacture and improvement of trade, or to govern a plantation. If I were a prince, I should make him my second councillor at least. He was, with all this, facetious and of easy conversation, friendly and courteous, and had such a faculty of imitating others, that he would take a text and preach, now like a grave orthodox divine, then falling into the Presbyterian way, then to the fanatical, the Quaker, the monk, the friar, the popish priest, with such admirable action, and alteration of voice and tone, as if it were not possible to abstain from wonder, and one would swear to hear several persons, or forbear to think he was not in good earnest an enthusiast, and almost beside himself; then he would fall out of it into a serious discourse; but it was very rarely he would be prevailed on to oblige the company with this faculty, and that only amongst intimate friends.'

Petty invented a double-bottomed ship, and patented inventions for the improvement of carriages, cannon, and pumps. During all those

occupations, he found time to write treatises on statistics and political economy, being one of the first to elevate the latter study to the rank of a science. His *Political Anatomy of Ireland* gives the first authentic account of the population of that country, and affords valuable information of its state towards the close of the seventeenth century. He clearly foresaw the great advantages of a union between England and Ireland, and of a free commercial intercourse between the two kingdoms. His treatise on *Taxes and Contributions* is far in advance of his time, and in this work is first demonstrated the now universally recognised doctrine, that the labour required for the production of commodities alone determines their value. In his *Quantulumcunque* (a treatise on money), he condemns laws regulating the rate of interest, observing that there might just as well be laws to regulate the rate of exchange; and he exposes the then prevailing fallacy, that a country might be drained of cash by an unfavourable balance of trade.

Petty, in that remarkable document, his will, shews that he well understood the true principles of political economy as respects mortuary charities; clearly foreseeing the many evils that have since arisen from injudicious bequests. He says:

'As for legacies to the poor, I am at a stand; as for beggars by trade and election, I give them nothing; as for impotents by the hand of God, the public ought to maintain them; as for those who have no calling nor estate, they should be put upon their kindred; as for those who can get no work, the magistrates should cause them to be employed, which may be well done in Ireland, where is fifteen acres of improvable land for every head; prisoners for crimes, by the king; for debts, by their prosecutors; as for those who compassionate the sufferings of any object, let them relieve themselves by relieving such sufferers—that is, give them alms *pro re nata*, and for God's sake, relieve the several species above mentioned, if the above-mentioned obligees fail in their duties. Wherefore, I am contented that I have assisted all my poor relations, and put many in a way of getting their own bread, and have laboured in public works, and by inventions have sought out real objects of charity; and I do hereby conjure all who partake of my estate, from time to time, to do the same at their peril. Nevertheless, to answer custom, and to take the surer side, I give £20 to the most wanting of the parish, in which I may die.'

He further concludes his will with the following profession of his religious opinions:

'I die in the profession of that faith, and in the practice of such worship, as I find established by the laws of my country; not being able to believe what I myself please, nor to worship God better than by doing as I would be done unto, and observing the laws of my country, and expressing my love and honour of Almighty God by such signs and tokens as are understood to be such by the people with whom I live, God knowing my heart, even without any at all; and thus begging the Divine Majesty to make me what he would have me to be, both as to faith and good works, I willingly resign my soul into his hands, relying only on His infinite mercy, and the merits of my Saviour, for my happiness after this life, where I expect to know and see God more clearly than by the study

of the Scriptures, and of his works, I have hitherto been able to do. Grant me, O Lord, an easy passage to thyself, that as I have lived in thy fear, I may be known to die in thy favour, Amen.'

Petty died on the 16th of December 1687, and was interred beside his humble parents at Rumsey; a flat stone in the church pavement, cut by an illiterate workman, records—

'HERE LAYES
SIR WILLIAM
PETTY.'

He left three children; his eldest son, Charles, was created Baron Shelburne by William III., and, dying without issue, was succeeded by his younger brother, Henry, created Viscount Dunkeron, and Earl of Shelburne. Henry was succeeded by a sister's son, who adopted his name and arms, and the noble family of Lansdowne, seemingly inheriting the talents with the estates, have ever proved themselves worthy namesakes and representatives of Sir William Petty.

WILHELM GRIMM'S MARRIAGE.

The renowned literary copartnership, known as the 'Brothers Grimm,' was, on 16th December 1859, dissolved by the death of the younger member of the firm. The present year (1863) has witnessed the death of the surviving elder brother, Jacob Grimm; and in the decease of these two eminent men, Germany has been deprived of the two greatest philologists and critical archaeologists which even she can boast of. The learning and industry of the brothers was only surpassed by the beautiful simplicity and affection which characterised their progress and mutual intercourse through life. An interesting epitome of their history, as well as some curious circumstances connected with the marriage of Wilhelm Grimm, are given in a letter which lately appeared in the columns of a widely-circulated newspaper, from its Prussian correspondent. The story, from its piquancy, merits being preserved, and we accordingly quote it as follows:

'From morn till night they [Jacob and Wilhelm Grimm] worked together in contiguous rooms for nearly sixty years. United in literary labour, they never separated socially. A librarian's office, or a professorship, conferred upon one of them, was never accepted until an analogous post had been created for the other. William installed Jacob in the library of Marburg, Jacob drawing William after him to the university of Göttingen. They lived in the same house, and it is more than a fable they intended to marry the same lady; or rather they intended not. The story is, that an old aunt, taking commiseration on the two elderly bachelors, and apprehensive of the pecuniary consequences of their students' life, resolved to provide them with partners fit to take care of them after her death. After great reluctance, the two philological professors were brought to see the sense of the plan. They agreed to marry, but on this condition, that one of them should be spared, and the wife of the other obliged to look after the finances and linen of both. A young lady being produced, the question of who should be the victim was argued for many an hour between the unlucky candidates. Nay, it is even alleged that

the publication of one of their volumes was delayed full eight days by the matrimonial difference. At length Jacob, being the elder, was convinced of his higher duty to take the leap. But he had no idea how to set to work, and ingratiate himself with the lady. Half from a desire to encourage his brother, and half from a wish to take some share of the burden, William offered to come to the rescue in this emergency, and try to gain favour with the future Mrs Grimm. Then Cupid interfered, and took the matter into his own hands. The lady being a lovely girl of twenty-two, distinguished by qualities of heart and head, proved too many for the amateur. She had been entirely ignorant of the honours intended for her, and the fraternal compact to which she had given occasion; and it is, perhaps, for this very reason that, falling in love with her resolute antagonist, she so changed the feelings of the latter as to convert him into a slave and admirer before the end of the week. Then arose a difficulty of another but equally delicate nature. Over head and ears in love, William dared not make a clean breast of it to the fair lady. In his conscience he accused himself of felony against his brother. He had broken their agreement; he had robbed him of his bride. He felt more like a villain than ever he did in his life. But heaven knew what it did in furnishing him with an old aunt. Stepping in at the right moment, and acquainting Jacob with what had been going on before his eyes, this useful creature cut the Gordian-knot in a trice. So far from getting into a fury, and hating his brother for what he could not help, Jacob was barbarous enough to declare this the most joyous tidings he had ever received. So William was married, Jacob making off for the Harz, and roving about among the hills and vales with the feelings of an escaped convict. The marriage was happy. Of the two sons resulting from it, the younger, a poet of great promise, many years after married the second daughter of Bettina von Arnim. After, as before it, the two brothers continued to keep house together.

In further reference to the Brothers Grimm, who, as is well known, have acquired great popularity with juvenile readers by their collection of fairy tales and legends, the following amusing anecdote may here also be introduced. It is related in the *Athenæum* for 1859, and is given on the authority of Jacob Grimm himself. A little girl of about eight years old, evidently belonging to an upper-class family, called one day at Dr Grimm's house, and desired to see the 'Herr Professor.' The servant shewed her into the study, where Dr Grimm received her, and inquired, with great kindness, what she had to say to him. The little maiden, looking very earnestly at the professor, said: 'Is it thou who hast written those fine Märchen' [fairy tales]?

'Yes, my dear, my brother and I have written the Haus Märchen.'

'Then thou hast also written the tale of the clever little tailor, where it is said, at the end, who will not believe it must pay a thaler' [dollar]?

'Yes, I have written that too.'

'Well, then, I do not believe it, and so, I suppose, I have to pay a thaler; but as I have not so much money now, I'll give thee a groschen [about three-halfpence] on account, and pay the rest by and by.'

The professor, as may be expected, was highly amused with this combination of childish simplicity and conscientiousness. He inquired the name of his little visitor, and took care that she reached home in safety. Doubtless also the kind old man must have felt ever afterwards something like a paternal affection for the tiny critic, who had thus taken so warm an interest in one of his own bantlings.

A CONVIVIAL ENTHUSIAST OF THE OLD SCHOOL.

December 16, 1813, died at his house, in Welbeck Street, William Bosville, of Gunthwaite, Esq., at the age of sixty-nine; in some respects a notable man. According to the report of his grand-nephew, the Rev. John Sinclair, in the memoirs of his father, Sir John Sinclair, he shone as an eccentric *habitué* of London during a large part of the reign of George III. 'My grand-uncle's exterior,' says Mr Sinclair, 'consisted of the single-breasted coat, powdered hair and queue, and other paraphernalia, of a courtier in the reign of George II.; but within this courtly garb was enclosed one of the most ultra-liberal spirits of the time. He assembled every day at his house, in Welbeck Street, a party of congenial souls, never exceeding twelve in number, nor receiving the important summons to dinner a single moment after five o'clock. . . . A slate was kept in the hall, on which any intimate friend (and he had many) might inscribe his name as a guest for the day. . . . He scarcely ever quitted the metropolis; he used to say that London was the best residence in winter, and that he knew no place like it in summer. But though he seldom really travelled, he sometimes made imaginary journeys. He used to mention, as a grave fact, that he once visited the Scilly Isles, and attended a ball at St Mary's, where he found a young lady giving herself great airs, because her education had received a "finish" at the Land's End. Another of his stories was that, having been at Rome during the last illness of Clement XIV., he went daily to the Vatican, to ascertain what chance he had of enjoying the spectacle of an installation. The bulletins, according to my uncle's playful imagination, were variously expressed, but each more alarming than its predecessor. First, "his Holiness is very ill;" next, "his Excellency is worse;" then, "his Eminence is in a very low state;" and at last, the day before the pope expired, came forth the startling announcement, "his Infallibility is delirious." This pleasant original occasionally coined anecdotes at the expense of his own guests, and related them to their face, for the amusement of the company. Parson Este was once editor of a paper called the *World*; and Bosville alleged of him, before a large party, that one day a gentleman in deep mourning came to him at the office, requesting the insertion of a ready-made panegyric upon his brother, who had died a few days before. "No!" answered the reverend editor; "your brother did not choose to die in our newspaper, and that being the case, I can find no room for eulogies upon him." It was a favourite saying of Bosville, which my father borrowed from him, when he wanted to give encouragement to a diffident friend, "Il faut risquer quelque chose." The origin of this catch-word was a story told by Bosville of a party of

French officers, each of whom outvied the rest in relating of himself some wonderful exploit. A young Englishman, who was present, sat with characteristic modesty in silence. His next neighbour asked him why he did not contribute a story in his turn, and, being answered, "I have done nothing like the feats that have been told us," patted him on the back, and said with a significant look: "Eh, bien, monsieur, il faut risquer quelque chose."

['Bosville] wished his dinner-parties to be continued to the very last. His health declined, and his convivial powers deserted him; but the slate hung as usual in the hall, and he felt more anxiety than ever that the list of guests upon it should not fail of its appointed number. . . . Even during his last hours, when he was confined to his chamber, the hospitable board was regularly spread below. He insisted upon reports from time to time of the jocularities calling forth the laughter which still assailed his ear; and on the very morning of his decease, gave orders for an entertainment punctually at the usual hour, which he did not live to see.'—*Rev. John Sinclair's Memoirs of Sir John Sinclair*, 2 vols. 1837.

Though, as Mr Sinclair informs us above, his grand-uncle clung most pertinaciously to the metropolis and rarely quitted it to any distance, there was, nevertheless, a series of country excursions which he long continued to make with great regularity. We allude to the famous Sunday-parties given by John Horne Tooke to his friends at his mansion at Wimbledon. Among the numerous guests who, on the first day of the week, might be seen ascending the hill from Putney, or crossing Wimbledon Common, to their host's residence, Mr Bosville was one of the most constant; and we are informed by Mr Stephens, in his life of Horne Tooke, that for 'many years a coach-and-four, with Mr Bosville and two or three friends, punctually arrived within a few minutes of two o'clock; and, after paying their respects in the parlour, walked about an hour in the fine gardens, with which the house was, all but on one side, surrounded. At four, the dinner was usually served in the parlour looking on the common.' To such festive reunions, presided over by the great wit and *bon vivant* of the day, Mr Bosville's own parties seem to have borne a close resemblance, though doubtless his social and conversational powers paled before those of the author of *The Diversions of Purley*.

ABOLITION OF THE PASSPORT-SYSTEM IN FRANCE.

A wise and liberal measure adopted by the emperor of the French, in 1861, had the effect of drawing public attention to an international system which travellers had ample reason to remember with bitterness. This was the system of *passports*—'that ingenious invention,' as a writer in the *Quarterly Review*, in 1855, characterised it, 'for impeding the tourist and expediting the fugitive.' From early times, sovereigns claimed the right of prohibiting, if they chose, the entrance into their dominions of the subjects of another sovereign; and of equally prohibiting the exit of their own subjects. Hence, when states were at peace, the sovereigns adopted a plan of permitting the relaxation of this rule, through the medium of their

respective ambassadors or representatives. Hall, in his *Chronicle*, adverts to these sovereign rights in the reign of Edward IV.; and the rules are known to have been very strict in the times of Elizabeth and James I. Passports are a very ancient institution. It is mentioned by some of the old monkish chroniclers as an achievement on the part of King Canute, that he obtained *free passes* for his subjects through various continental countries, on their pilgrimages to the shrines of the Apostles Peter and Paul at Rome. Each pilgrim was furnished with a document in the nature of a passport, called *Tracturia de Itinere Peragenda*. The general form of these documents was as follows: 'I [here comes the name of the person granting the passport], to our holy and apostolic and venerable fathers in Christ, and to all kings, bishops, abbots, priests, and clerks in every nation of Christendom, who devote themselves to the service of the Creator, in monasteries, in cities, in villages, or in hamlets. Be it known to you that this our brother [here comes the name of the person holding the passport] and your servant, has obtained permission from us to proceed on a pilgrimage to the Church of St Peter, your father, and to other churches, to pray for his soul's sake, for yours, and for ours. Therefore do we address this to you, begging that you will, for the love of God and of St Peter, give him hospitable treatment, aiding, consoling, and comforting him—affording to him free ingress, egress, and regress, so that he may in safety return to us. And for so doing, may a fitting reward be bestowed on you, at the last day, by Him who lives and reigns for ever!' This was something more than a passport, however, seeing that it entreated hospitality for the pilgrims.

Those perplexing people, the Chinese, who have anticipated us in so many things, had a passport-system nearly a thousand years ago. The Abbé Renaudot, in his translation of the Travels of Ebn Wahab, in the tenth century, gives the following passage: 'If a man travel from one place to another, he must take two passes with him—the one from the governor, the other from his deputy or lieutenant. The governor's pass permits him to set out on his journey, and takes notice of the name of the traveller and of those of his company; the age and family of the one and the other. And this is done for the information of the frontier places, where these two passes are examined; for whenever a traveller arrives at any of them, it is registered: "That such a one, the son of such a one, of such a family, passed through this place on such a day," &c.' The reason assigned by the Arabian traveller for this custom is the following: 'By this means they prevent any one from carrying off the money or effects of other persons, or their being lost.' It is not difficult to see that a system of registry, by which the movements and location of the subjects of a sovereign could be known, may be made applicable to some useful purposes; but when nations have advanced in civilisation, when their trading transactions bring them more and more into correspondence, the system becomes an impediment, productive of far more harm than good.

The *Moniteur*, the official French newspaper, contained the following announcement on the 16th of December 1860: 'The Emperor has decided that after the 1st of January next, and by

reciprocity, the subjects of her Majesty the Queen of Great Britain and Ireland coming into France, shall be admitted and allowed to travel about without passports. The Minister of the Interior will give instructions to his agents to see this matter carried out.' It had been long known that the Emperor's personal opinions were opposed to the passport-system, and that he had only waited for the current of French thought to flow in the same direction as his own. A leading article in the *Times*, two days afterwards, forcibly depicted the evils of the system which has thus been happily abolished: 'The passport-system was a standing annoyance to British subjects in France. It involved the two things which Englishmen detest most—vexatious stoppages for the sake of small exactions, and constant liability to official interference. You might seldom experience the actual evil, but you never got rid of the risk. At any hour of the day or night, on any pretence, or on no pretence, you might be required to produce your "papers," like a suspicious-looking vessel on the high-seas; and, if this manifest of your person and purposes did not satisfy the inquirer, you were liable to detention and imprisonment at his discretion. It was a right of search in the most offensive form, hanging over the traveller at every stage of his journey. At the best, you could never escape molestation or fine. You might compound with a *commissaire*, and be quit of the job for a two-franc piece and a couple of hours' delay; but that much was inevitable, and, as it might recur at every town you came to, you were never safe. Above all—and this was the most exasperating feature in the case—the system placed you, as a matter of course, under the notice and control of the police, from the first moment of your arrival in the country, to the moment of your departure. The very fact of your travelling was regarded as a proceeding requiring justification. You had to clear yourself of a *prima facie* case against you, and the passport was your ticket-of-leave. Unluckily, it was impossible to insure the completeness of this precious document. No man could ever take it for granted that his passport was in perfect order; and, consequently, he was always at the mercy of the police, who, from whim, suspicion, zeal, or spite, might deal with him as they chose, on no other warrant than some alleged defect in the cabalistic form of the passport. Passports were to police agents what the confessional is to the Romish priesthood—the instrument of power and action.' If this mode of keeping out the unoffending had the effect of keeping out offenders also, something might be said in its favour; but this is precisely what it did *not* do. 'None knew this better than the police themselves. They understood perfectly that all the fish they pretended to catch, slipped always, and, as a matter of course, through their meshes. We think we may defy any one to produce an instance of a conspirator, malefactor, or other evil-minded person who was arrested upon the evidence of his passport. On the contrary, as the police were bound, by the conditions of their own system, to take the shewing of the passport as conclusive, and as the papers of these gentry were invariably in order, the disguise proved exceedingly convenient to them. Except for their passports, they might have had to give some account of themselves, but these documents

saved them all trouble and risk together. There they were, stamped and ticketed as lawful travellers by the police themselves, bearing the police-mark, and covered by the police certificate. As they had taken excellent care to observe every formality, there was nothing to be done with them; and the weight of the system consequently fell on the unsuspecting victims, whose very innocence had prevented them from providing against its snares.' The truth is, that a swarm of officials lived and prospered upon the profits of the system; and as the destruction of those gains would be equivalent to the destruction of a profession, all those who practised the profession had a strong reason for maintaining the system, and staving off reform as long as possible. Hence the oft-repeated assertions that the passport-system was the palladium, the ægis, the shield of good government.

The probabilities are, that other governments will, one by one, abandon the absurd restrictions which have thus been abolished by France.

DECEMBER 17.

St Olympias, widow, about 410. St Begga, widow and abbess, 698.

Born.—Anthony Wood or à Wood, antiquarian writer, 1632, *Oxford*; Gabrielle Emilie, Marquise du Chastelet, translator of Newton's *Principia*, 1706; Ludwig Beethoven, eminent composer, 1770, *Bonn*; Sir Humphry Davy, chemist, 1779, *Penzance*.

Died.—Sir William Gascoigne, lord chief-justice, 1413; Simon Bolivar, liberator of South America, 1831, *Carthagena*; Kaspar Hauser, mysterious founding, from the stroke of an assassin on the 14th, 1833, *Ansbach, Bavaria*; Maria Louisa, archduchess of Parma (empress of the French), 1847, *Parma*.

KASPAR HAUSER.

Like the 'Man in the Iron Mask,' the identity of the unfortunate Kaspar Hauser, the foundling of Nuremberg, has formed the subject of much curious speculation. To the present day, the mystery hanging over his origin remains undispeled, and the whole affair is beset with such anomalies and contradictions, that it is almost impossible to form even a well-grounded conjecture on the subject. The following are the ascertained facts of the case.

Between four and five o'clock in the afternoon of 26th May 1828, a young lad, apparently of about sixteen or seventeen years of age, was found in a helpless and forlorn condition in the marketplace of Nuremberg, by a citizen of that town. He was dressed like a peasant-boy, and had with him a letter addressed to the captain of the sixth regiment of horse at Nuremberg. Being conducted to this officer and interrogated, it soon became evident that he could speak very little, and was almost totally ignorant. To all questions he replied, 'Von Regensburg' (from Regensburg), or 'Ich woais nit' (I don't know). On the other hand, he wrote his name in firm legible characters on a sheet of paper, but without adding the place of his birth, or anything else, though requested to do so. Though short and broad shouldered, his figure was perfectly

well-proportioned. His skin was very white; his limbs delicately formed, the hands and feet small and beautiful, the latter, however, shewing no marks of his having ever worn shoes. With the exception of dry bread and water, he shewed a violent dislike to all kinds of meat and drink. His language was confined to a few words or sentences in the old Bavarian dialect. He shewed entire ignorance of the most ordinary objects, and great indifference to the conveniences and necessities of life. Among his scanty articles of clothing was a handkerchief marked K. H.; he had likewise about him some written Catholic prayers. In the letter which he carried, dated 'From the confines of Bavaria, place unknown, 1828,' the writer stated himself to be a poor day-labourer, the father of ten children, and said that the boy had been deposited before his door by his mother, a person unknown to the writer. He stated further, that he had brought up the boy secretly, without allowing him to leave the house, but had instructed him in reading, writing, and the doctrines of Christianity; adding that it was the boy's wish to become a horse-soldier. The letter enclosed a line, apparently from the mother, stating that she, a poor girl, had given birth to the boy on the 30th April 1812, that his name was Kaspar, and that his father, who had formerly served in the sixth regiment, was dead.

The poor boy having been taken before and attended to by the magistrates, his story was soon made known to the public, and he himself became the object of general sympathy. Binder, a burgo-master, exerted himself, in particular, to throw some light on the obscurity in which the origin of the young man was involved. In the course of many conversations with him, it came out that Hauser, from his childhood, had worn only a shirt and trousers; that he had lived in a dark place underground, where he was unable to stretch himself out at full length; that he had been fed upon bread and water by a man who did not shew himself, but who cleaned and dressed him, and provided him with food and drink while he was in a state of natural or artificial sleep. His sole occupation was playing with two wooden horses. For some time before he was conveyed to Nuremberg, the man had come oftener to his dungeon, and had taught him to write by guiding his hand, and to lift his feet and walk. This narrative gave rise to various suppositions and rumours. According to some, this mysterious foundling was the natural son of a priest, or of a young lady of high rank, while others believed him to be of princely origin, or the victim of some dark plot respecting an inheritance. Some incredulous persons believed the whole affair to be an imposition. On the 18th July 1828, Hauser was handed over to the care of Professor Daumer, who afterwards acted the part of his biographer. The history of his education is remarkable in a pedagogic point of view, as his original desire for knowledge, his extraordinary memory, and acute understanding decreased in proportion as the sphere of his knowledge extended. His progress was, on the whole, small. On the 17th October 1829, he was found bleeding from a slight wound on the brow, which he said had been inflicted by a man with a black head. All efforts made to discover the perpetrator were ineffectual. The incident excited a great sensation; Hauser was

conveyed to the house of one of the magistrates, and constantly guarded by two soldiers. Among the many strangers who came to see him was Lord Stanhope, who became interested in him, and sent him to be educated at Anspach. Here he was employed in an office of the court of appeal, but he by no means distinguished himself either by industry or talent, and was gradually forgotten, till his death again made him the subject of attention. This event took place under the following singular circumstances. A stranger, under the pretext of bringing him a message from Lord Stanhope, and informing him of the circumstances of his birth, engaged to meet Hauser in the palace garden at three o'clock in the afternoon of the 14th December 1833. The hapless young man was faithful to the rendezvous, but he had scarcely commenced to converse with the unknown emissary, when the latter stabbed him in the left side, and he fell mortally wounded. He had, however, sufficient strength left to return home and relate the circumstances of his assassination, and three days afterwards, on the 17th December 1833, he died. Among the many surmises current regarding the unfortunate Hauser, the latest is that he was the scion of a noble family in England, and that his dark and mysterious history, with its atrocious termination, had its origin in this country. But nothing beyond mere conjecture has ever been adduced.

THE DAY OF THE ANCIENT BRITON.

Ancient Britain is not so entirely a thing of the past as is generally supposed. When the ancient Britons were driven out of their territory, they could not carry their old homes with them; these were abandoned, and it is probable that the sites of many of them were occupied by the Roman conquerors. But in inaccessible places, beyond the Roman Wall, this was not the case; and to this day, among the Cheviot Hills, may be seen one of their deserted towns, several strong forts, numerous isolated huts, a monolithic ring temple, terraces on the steep hill-sides on which they grew their corn, barrows and cairns innumerable. These remains of ancient Britain yield a vivid realisation of the day of our Celtic predecessors.

The deserted town just mentioned, is situated on the southern slope of one of the Cheviot Hills, called Greenshaw. It consists of a group of stone huts, between sixty and seventy in number, divided into three clusters. The largest cluster, containing upwards of thirty huts, is surrounded by two strong stone rampiers, a fact which suggests the supposition that on report of coming foe, all the inhabitants would take shelter within the enclosure. Time has clothed the summits of the walls with vegetation, and heaped up earth on the ruins; but this has not destroyed the identity of the place. The huts are of a circular form, built of large pieces of unhewn porphyry. This is the stone of the district; and is still to be seen in enormous quantities, lying, in blocks, among the heather and ferns on the sides of the hills. There was no quarrying required. All the ancient Briton had to do, was to collect pieces of suitable and portable sizes. To every hut there is a doorway; and to one of them an indication of a sill, or similar arrangement, to receive a door. They are

all roofless; and the question of what material the roofs were formed, is the only one about which there is any doubt; whether they were simply thatched with the abundant gorse, heather, or ferns, as the shepherds' huts are to this day in the same district, or whether they possessed conical roofs of stone or timber, we shall probably never know. In the extreme north of Scotland, there are circular stone-houses of a similar antiquity with conical stone roofs; yet, when several of these huts were cleared of the accumulations within them, for the purpose of an antiquarian survey,* at which the writer was present, no traces of roof stones were discovered. In nearly every instance, charred wood was found upon the flat stones with which the floors were rudely paved. There is a burn, called Linhope, near this town, from which, as well as from a couple of springs close by, water could be procured; and it is noticeable, that the distance to this stream is protected by a length of rampier. Several pieces of rough clay-pottery, found in the soil of the town, prove that pitchers were broken in going to the water in that day as in this. There is an ancient roadway, sunken two or three feet deep, and fortified by a rampier, down to the neighbouring river Breamish; and two others of a similar construction, lead from the west and from the east into the town.

On another of the Cheviot Hills, Yeavinger Bell, are further traces of ancient Britain. On the summit of this hill, about two thousand feet above the level of the sea, is an area of twelve acres, enclosed by a stone wall, upwards of ten feet thick, having four entrances into it, one of which is defended by a guard-house; and within this area is an inner fort, excavated out of the rock, of an oval form, measuring thirteen feet across the widest part. On the sides of the hill, and in a high valley between the Bell and the next hill, called Whitelaw, there are many remains of stone huts rudely flagged, some in groups surrounded by rampiers, and others isolated. Barrows, too, are numerous here. On Ingram Hill, several of these old-world tumuli have been opened; but nothing but charred wood has been found in them.

In the valley of the Breamish, where there are many more camps, there are traces of ancient British agriculture. These are terraces cut out of the hillsides, rising one above another. On some hills there are a dozen or more of these primitive cornfields, or hanging gardens. It is supposed that as the valleys were boggy and liable to floods, this was the mode of culture which presented less difficulty than any other to the Celtic mind.

The Celtic temple, or monolithic ring, in the same district, consists of thirteen huge stones, which once marked an oval enclosure on the bank of the Three Stone Burn. There were, probably, fourteen originally; as between the first and thirteenth there is a space double the extent that exists between any of the others. Several are overthrown, and lie bedded in heather. They are of different heights; the tallest being upwards of five feet; the shortest, scarcely two feet above the

ground. As this could not have been a place of residence, nor of defence, we may reasonably conclude that it was a place of worship. What rites were celebrated within its mystic oval we can but imagine; but the temple itself we may see with our eyes.

In fine, among the gorse, ferns, scarlet-leaved bilberries, mountain pinks, mosses, tall foxgloves, and heather of the Cheviot district, with its myriads of blocks of porphyry strewn upon the hills, and valleys covered with sea-green lichens, we have a considerable tract of ancient Britain still. We may enter the ancient Briton's fort, or his hut; we may climb the rampiers raised by his hands, scan his vast hunting-grounds and his terraced cornfields; and we may saunter, as we have seen, in his temple—so rudely grand with its background of hills and canopy of sky. We may search the *debris* of his deserted home, and find the flint arrow-head with which he shot; the horns of the deers so slain; the flint javelin-head he reserved for hostile tribes; the handmills with which his women ground corn; pieces of the pottery they used for domestic purposes; and, maybe, a portion of a discarded armlet worn by a Celtic princess.

THE 'O. P. RIOTS.'

The disturbance known in theatrical annals as the *O. P. Riots*, or the *O. P. Row*, was perhaps the most remarkable manifestation of the popular will ever displayed at any of our places of amusement, ending with a concession to public opinion rather than to rightful claim.

On the 20th of September 1808, Covent Garden Theatre was burned to the ground, involving the loss of many lives, and the destruction of property valued at little less than a quarter of a million sterling. As it had belonged to a sort of joint-stock company, money was soon found to rebuild the theatre; and great admiration was bestowed on the magnitude and beauty of the new structure, when it was opened to the public on the 17th of September 1809. But a storm was impending. The proprietors had issued an address or prospectus, announcing that, in consequence of the great expense incurred in rebuilding the theatre, the increased ground-rent charged by the Duke of Bedford, and the enhanced prices of almost everything needed for stage purposes, they would be compelled to raise the prices of admission to the boxes and pit. They appealed to the kindness and consideration of the public under these circumstances; and Mr John Kemble, in an opening address, adverted to the matter in the following very unpoetical terms:

'Solid our building, heavy our expense;
We rest our claim on your munificence;
What ardour plans a nation's taste to raise,
A nation's liberality repays.'

If there had been anything like 'free-trade' in theatres, the audience would have had no right to

* The following parody on these clumsy lines—testifying how the public were disposed to view the matter—appeared in the *Times*:

'Heavy our building, but not so th' expense;
We rest our hopes upon your want of sense;
What av'rice spends, new mines of wealth to raise,
A gen'rous people's folly soon repays.'

* The Berwickshire Naturalist's Club, assisted by a contribution from the Duke of Northumberland, surveyed the Celtic antiquities of the Cheviot district, in the summers of 1861 and 1862. An elaborate report of the survey was written by Mr Geo. Tate, F.G.S., Alnwick, one of the secretaries for the transactions of that body.

complain, but simply to stay away if they did not choose to pay the enhanced prices. As matters stood, however, in those days, the two 'Patent' or 'Royal' theatres, Covent Garden and Drury Lane, claimed great privileges over all the minor establishments; the public were forbidden to see Shakespeare represented except at the two great houses; and therefore they claimed, rightly or wrongly, to have some voice in determining the prices of admission. To assert this right, was evidently the purpose of a large number of the visitors on the opening night. They received Kemble with volleys of hooting, groaning, whistling, 'cat-calls,' and cries of 'Old Prices!'—the last soon abbreviated to 'O. P.!' The opening address passed over in dumb show; and so did the tragedy of *Macbeth* and the farce of the *Quaker*. The mob outside sympathised with the audience within, and Bow Street was a scene of tremendous commotion. Excited by the accounts given in the newspapers, the public prepared to go to the theatre on the second night in a spirit more warlike than ever; and on the third night, Kemble gave still greater offence to the audience by saying to them: 'I wait to know what you want.' So matters continued for a week: the actors and actresses bravely bearing the storm, instead of receiving the applause to which they were accustomed; and the audience determining that not a single word of the performances should be heard. At length, on the 23d, Mr Kemble made an announcement from the stage, which was certainly a fair one under the circumstances, to this effect—that a committee of gentlemen should be appointed to examine the accounts of the theatre, with a view of determining whether the new prices were or were not equitable; that the theatre should be closed until that committee had reported on their proceedings; and that the report should be accepted as conclusive by the two belligerents, the public and the proprietors. The audience took this proposal in good part; and on the following day a committee was formed, consisting of Alderman Sir Charles Price, Sir Thomas Plumer (solicitor-general), Mr Sylvester (recorder of the City of London), Mr Whitmore (governor of the Bank of England), and Mr Angerstein. The report of the committee was decidedly in favour of the proprietors; shewing that, if the new house were fully insured, and all expenses honourably paid, the probable gross receipts at the new prices would not yield more net profit than three and a half per cent. on the capital sunk; and that at the old prices, there would be no profit whatever. This report was printed on the play-bill for the re-opening night, October 4. The public had evidently expected a different decision, and manifested signs of turbulence before the curtain rose. The malcontents were of two kinds—those who insisted on the old prices, whether right or wrong; and those who doubted whether the committee had satisfactorily explained their meaning, and their mode of reasoning. The report said that the 'future profits' would probably be three and a half per cent. or *nil*, according as the new or the old prices were adopted. But there arose a doubt whether five per cent. had been implied as regular *interest* on the capital sunk, in addition to the *profit* named. This produced an explanation, to the effect that no such interest had been implied; and that the proprietors, in the opinion of the committee, would obtain no return

whatever for their money, unless the new prices were adopted.

According to all principles of fairness, the opposition should have ended here, unless some other fallacy or error had been detected. But it did not. On the contrary, the O. P. advocates formed themselves into a party, resolved to disturb the performances night after night, until their demands were acceded to. Then ensued a series of struggles which lasted during the extraordinary period of ten weeks, and which were not ended till the 'Treaty of Peace' was framed on the 17th of December. It became a regular part of the duty of the daily newspapers to notice the state of affairs at the theatre on the previous evening. Sometimes there were merely speeches *pro* and *con* by the pit-orators and Mr Kemble; sometimes cries and shouts, such as 'Old Prices!' 'No humbug for John Bull!' 'No garbled extracts!' &c.; while on other occasions the malcontents went to the expense of placards to the following effect: 'Mr Kemble, let your monopoly cease, and then raise your prices as high as you please!' 'No private boxes for intriguing!' 'A long pull, a strong pull, and a pull altogether, for old prices!' 'John Bull, be very bold and resolute! never depart from your resolution, but firmly keep your station.' The word 'monopoly' gives a clue to one motive for the opposition—the patent rights which Mr Kemble haughtily claimed in reference to the legitimate drama. As to the private boxes, they had increased in number, as a source of additional profit; and the dissatisfied public chose to stigmatise them on other than financial grounds. In addition to cries and placards, there was a continuous tumult of groaning, singing, laughing, and whistling; with an occasional accompaniment of coachmen's horns, showmen's trumpets, dustmen's bells, and watchmen's rattles. Many came with the symbolic initials, 'O. P.,' on their hats or coats. The malcontents got up a gymnastic exercise, which was known as the 'O. P. dance,' and which consisted in an alternate stamping of the feet, accompanied with the regular cry of 'O. P.!' in noisy and monotonous unison. As it was rather expensive to keep on this system night after night, the rioters began to adopt the plan of coming in at half-price; the curious effect of which was, that three acts of a play were listened to in the usual orderly manner by peaceful visitors; while of the remaining two acts not a word could be heard.

If the proprietors had remained quiescent, the disturbances would probably have died out after a few nights; and the new prices would have been adhered to or not, according as the house was well or ill filled. But they adopted a most reprehensible step—that of hiring prize-fighters, to convince the public by the force of fists. This gave a wholly new aspect to the struggle; many persons who had hitherto held aloof, now took part in the contest, for they felt exasperated at procedure so insulting. Dutch Sam, a noted pugilist of those days, organised his corps; and the pit became a scene of fighting. On one particular evening, Mr Clifford, a barrister, who had taken an active part in the opposition, entered the pit with the letters O. P. on his hat; he was received with cheers, and the old 'O. P. dance' again commenced. The proprietors now thought themselves strong enough to adopt decisive measures; at least this was the

view of Mr Brandon, the box-keeper, for he caused Mr Clifford to be arrested. Then ensued new scenes of excitement. Mr Brandon failed to get Mr Clifford convicted as a rioter; whereupon Mr Clifford succeeded in obtaining a verdict against Mr Brandon for false imprisonment. A meeting took place at the Crown and Anchor Tavern, with the view of obtaining subscriptions to defend any persons against whom, like Mr Clifford, proceedings might be instituted as rioters. Mr Kemble, feeling that the public were taking up the matter rather seriously, requested and obtained admission to this assembly. He offered, on the part of the proprietors, to concede most of the objects demanded, and to drop all prosecutions. The meeting demanded also the dismissal of Mr Brandon, who seems to have made himself unnecessarily offensive; but a supplicatory letter from him pacified the public. A few weeks afterwards, a public dinner was held, in which Mr Kemble took part, as a sort of ratification of the Treaty of Peace.

One of the most remarkable circumstances connected with the O. P. Riots is, that these enabled Stockdale, the publisher, to fill two entire octavo volumes, forming a compilation called the *Covent Garden Journal*. This work comprises, first, a statement of the cause of the quarrel; then a Journal of the sixty-seven nights' disturbances, numbered with all the regularity of Scheherazade's narrations in the *Arabian Nights' Entertainments*; and then an appendix of documents. These documents are valuable, in so far as they shew the tone of public feeling on the subject, as reflected in the newspaper-press. The *Times*, *Chronicle*, *Post*, *Examiner*, *Herald*, *Public Ledger*, and *Evening Post*, all are represented in these documents, and generally as opponents of the Kemble party. Some of the newspaper *jeux d'esprit*, and some of the placards distributed in the theatre, shewed how heartily many of the public entered into the comicality which formed one aspect of the affair. One commenced:

'Cease, cease the public here to knock, sirs;
The pit was never made for box-ers.'

Another:

'Surely the manager devoid of grace is;
He pigeons both our pockets and our places.'

A third: 'In consequence of the general hoarseness in town, occasioned by a clamour for Old Prices, the confectioners, it is said, have determined, in the sale of their pectoral lozenges, to follow Mr Kemble's plan, by charging an advance.' The *Morning Chronicle* appeared with:

'Since naught can appease Johnny Bull but O. P.,
And the promised suppression of every P. B.,
The playhouse, no doubt, will continue M. T.,
For King John has declar'd he 'd be sooner D. D.'

The following was a parody on Gray's *Bard*, beginning:

'Ruin seize thee, ruthless John,
Confusion on thy banners wait.'

And another on *Chevy Chase*:

'God prosper long our noble king,
Our cash and comforts all;
In Covent Garden while I sing
The row that did befall.'

One effusion was to be sung to the tune of 'Said a Smile to a Tear':

'Said a P to an O,
Where d'ye intend to go?
Said the O, I've not fixed upon whither.
O then, said the P,
You and I will agree,
To kick up a row both together.'

A second to the air of 'Derry Down':

'They send in their ruffians, who saucily sit,
With their doxies in front-seats of boxes and pit,
With orders to stifle the voice of the town,
And convince us of error by knocking us down.
Derry down.'

A third to that of *The Frog in an Opera Hat*:

'John Kemble would an acting go;
Heigho, says Rowley.
He raised the price which he thought too low,
Whether the public would let him or no,
With his roly-poly,
Gammon, and spinage,
Heigho, says Kemble.'

The *House that Jack Built* was brought into requisition, with stanzas which commenced with—

'This is the House that Jack built.
These are the Boxes, let to the great, that
Visit the House that Jack built.'

And so on to the last cumulative clause, which ran thus:

'This is the Manager full of scorn, who
raised the price to the People forlorn,
and directed the Thief-taker, shaven
and shorn, to take up John Bull with
his Bugle-horn, who hissed the Cat
engaged to squall, to the poor in the
Pigeon-holes, over the Boxes, let to
the Great, who visit the House that
Jack built.'

The 'Cat' was Madame Catalani, a little out of favour at that time with some of the public. Nor did the *National Anthem* fail in the hands of these parodists:

'God save great Johnny Bull,
Long live our Johnny Bull,
God save John Bull!
Send him victorious,
Loud and uproarious,
With lungs like Boreas,
God save John Bull!'

DECEMBER 18.

Saints Rufus and Zozimus, martyrs, 116. St Gatian, first bishop of Tours, confessor, about 300. St Winebald, abbot, and confessor, 760.

Born.—Prince Rupert, military commander, 1619, *Prague*.
Died.—Robert Nanteuil, celebrated engraver, 1678, *Paris*; Heneage Finch, Earl of Nottingham, 1682; Veit Ludwig von Seckendorf, political and theological writer, 1692, *Halle*; Soame Jenyns, religious and general writer, 1787; Pierre Louis de Prévile, celebrated French comedian, 1799; Johann Gottfried Von Herder, German theologian and philosopher, 1803; Dr Alexander Adam, eminent classic scholar and teacher, 1809, *Edinburgh*; Thomas Dunham Whitaker, antiquarian writer, 1821, *Blackburn*; General Lord Lynedoch, 1843, *London*; Samuel Rogers, poet, 1855, *London*.

SUN-DIALS AND HOUR-GLASSES.

When the philanthropist Howard was on his death-bed, he said: 'There is a spot near the village of Dauphiney, where I should like to be buried; suffer no pomp to be used at my funeral, no monument to mark the spot where I am laid; but put me quietly in the earth, place a sun-dial over my grave, and let me be forgotten.' A similar affection was evinced by Sir William Temple, who desired that his heart might be placed in a silver box and deposited under the sun-dial in his garden, where he had experienced so much pleasure in contemplating the works of nature.

Sun-dials are of very ancient date, and the honour of inventing them is claimed for the Phœnicians. The earliest mention of them occurs in the well-known incident recorded in Scripture of King Hezekiah, who, when sick and penitent, is granted, in miraculous evidence of the Lord's intention to restore him to health, that the shadow shall go backward ten degrees on the sun-dial of Ahaz. Homer, too, often supposed to be a contemporary of Hezekiah, states, in his *Odyssey*, that there was a dial in the Island of Syra, upon which was represented the sun's annual race.

Two centuries ago, sun-dials attracted more attention than they do at the present time. The great sculptor, Nicholas Stone, mentions, under date 1619, the making of a dial at St James's, the king finding stone and workmanship only, for the which he had £6, 13s. 4d. 'And in 1622,' he says, 'I made the great dial in the privy-garden, at Whitehall, for the which I had £46.' 'And in that year, 1622,' he continues, 'I made a dial for my Lord Brook, in Holbourn, for the which I had £8, 10s.' And for Sir John Daves, at Chelsea, he made a dial and two statues of an old man and a woman, for which he received £7 a piece.*

In Joseph Moxon's *Tutor to Astronomie and Geographie, or An easie way to know the use of both the Globes* (1659), there are ample directions for the making of sun-dials of many various kinds, and among others 'a solid ball or globe that will shew the hour of the day without a gnomon.' The principle followed in this case, was to have a globe marked round the equator with two series of numbers from 1 to 12, and to erect it, rectified for the latitude, with one of the 12's set to the north, the other to the south. When the sun shone on this globe, the number found under the place where the shadowed and illuminated parts met, was the hour of the day.

Mr Moxon has fortunately given us a representation, here copied, of a dial of this kind perched on the top of a columnar fountain, which was erected by Mr John Leak, at Leadenhall Corner, in London, in the mayoralty of Sir John Dethick, knight, and thus has preserved to us, incidentally, an object much more important than the dial—namely, a beautiful fountain which once adorned one of the principal thoroughfares of the metropolis, furnishing those supplies of healthful beverage which the charity of our age has again offered through the medium of our so-called 'drinking fountains.'

However invaluable sun-dials might be as chronometers, they could only be of use in daylight, and when the sun was actually shining. Some

mode had to be devised for supplying their place in cloudy weather, at night, or within doors. One contrivance employed by the ancients for this end

SUN-DIAL AND FOUNTAIN, FORMERLY AT LEADENHALL CORNER, LONDON.

was the *clepsydra*, or water-clock, which noted the passing of time by the escape of water through a vessel, with a hole at the bottom, into a cistern beneath. Another method, designed on a similar principle, was that of the hour-glass, by which the lapse of time was ascertained through the passing of a small quantity of sand from the upper to the

* *Anecdotes of Painting in England.*

lower part of the glass. Hour-glasses are said to have been invented at Alexandria about the middle of the third century, and we are informed that persons used to carry them about as we do watches. They are familiar to us as an accompaniment, in pictorial representations, of the solitary monk or anchorite, where the hour-glass is generally exhibited along with the skull and crucifix. They were also attached to pulpits, in order to regulate the length of sermons.

But this last mode of employing hour-glasses seems to have been chiefly introduced after the Reformation, when long sermons came much into fashion. Previous to that period, pulpit-discourses appear to have been generally characterised by brevity. Many of St Austin's might be easily delivered in ten minutes; nor was it usual in the church to devote more than half an hour to the most persuasive eloquence. These old sermons were of the nature of homilies, and it was only when the church felt called upon to explain tenets attacked, or eliminate doctrinal disputes, that they altered in character; and the pulpit became a veritable 'drum-ecclesiastic.' From the days of Luther, the length of sermons increased, until the middle of the seventeenth century; when the Puritan preachers inflicted discourses of two hours or more in duration on their hearers. In some degree to regulate these enthusiastic talkers, hour-glasses were placed upon the desks of their pulpits, and in 1623, we read of a preacher 'being attended by a man that brought after him his book and hour-glass.' Some churches were provided with half-hour glasses also, and we may imagine the anxiety with which the clerk would regard the choice made by the parson, as upon this would depend the length of his attendance. L'Estrange tells an amusing story of a parish clerk, who had sat patiently under a preacher, 'till he was three-quarters through his second glass,' and the auditory had slowly withdrawn, tired out by his prosing; the clerk then arose at a convenient pause in the sermon, and calmly requested 'when he had done,' if he would be pleased to close the church-door, 'and push the key under it,' as himself and the few that remained were about to retire.

In the sixteenth century, pulpits began to be regularly furnished, with iron-work stands, for the

iron bar, acts as a handle by which the hour-glass may be turned in its stand. Sometimes these stands and glasses were very elaborate in design, and of costly materials. At Hurst, in Berkshire, is a wrought-iron work of the kind most intricately designed. It has the date 1636, and the words, 'as this glass runneth, so man's life passeth,' amid foliations of oak and ivy. The frame of the hour-glass of St Dunstan's, Fleet Street, was of solid silver, and contained enough of the precious metal to be melted down, and converted into staff-heads for the parish beadle.

The lonely church of Cliffe, on the Kentish coast, between Gravesend and the Nore, furnishes us with a second example of the stand alone. The pulpit is of carved wood, dated 1634. This stand is affixed thereto by a bracket, which bears upon the shield the date 1636. It is on the preacher's left side.

PULPIT HOUR-GLASS—NO. 2.

In the book of St Katherine's Church, Aldgate, date 1564, we find, 'Paid for an Hour-glass that hangeth by the pulpit where the preacher doth make a sermon, that he may know how the hour passeth away, one shilling;' and in the same book, among the bequests of date 1616, is 'an hower-glass with a frame of irone to stand in.' In the time of Cromwell, the preacher, having named the text, turned up the glass; and if the sermon did not last till the sand had run down, it was said by the congregation that the preacher was lazy; but if, on the other hand, he exceeded this limit, they would yawn and stretch themselves till he had finished.

Many humorous stories originated from this clerical usage. There is a print of Hugh Peter's preaching, holding up the hour-glass, as he utters the words, 'I know you are good-fellows, so let's have another glass!' A similar tale is told of Daniel Burgess, the celebrated Nonconformist divine, at the beginning of the last century. Famous for the length of his pulpit harangues, and the quaintness of his illustrations, he was at one time declaiming with great vehemence against the sin of drunkenness, and in his ardour had fairly allowed the hour-glass to run out before bringing his discourse to a conclusion. Unable to arrest himself in the midst of his eloquence, he reversed the monitory horologe, and exclaimed, 'Brethren,

PULPIT HOUR-GLASS—NO. 1.

reception of the hour-glass. One of these in Compton Bassett Church, Wilts, is here represented; the large fleur-de-lys, in the centre of the

I have somewhat more to say on the nature and consequences of drunkenness, *so let's have the other glass—and then!*—the usual phrase adopted by toppers at protracted sittings.

Mr James Maidment, in his *Third Book of Scottish Pasquils*, has given a somewhat similar anecdote. 'A humorous story,' he observes, 'has been preserved of one of the Earls of Airly, who entertained at his table a clergyman, who was to preach before the Commissioner next day. The glass circulated, perhaps, too freely; and whenever the divine attempted to rise, his lordship prevented him, saying: "Another glass—and then!" After conquering his lordship, his guest went home. The next day the latter selected as his text, "The wicked shall be punished and right *airly!*" Inspired by the subject, he was by no means sparing of his oratory, and the hour-glass was disregarded, although he was repeatedly warned by the precentor, who, in common with Lord Airly, thought the discourse rather lengthy. The latter soon knew why he was thus punished, by the reverend gentleman (when reminded) always exclaiming, not *sotto voce*, "Another glass—and then!"'

Fosbroke, in his *British Monachism*, tells a quaint tale of a mode by which long sermons were avoided: 'A rector of Bibury used to preach two hours, regularly turning the glass. After the text, the esquire of the parish withdrew, smoked his pipe, and returned to the blessing.'

Hogarth, in his 'Sleeping Congregation,' has introduced an hour-glass on the left-hand side of the preacher. They lingered in country churches; but they ceased to be in anything like general use after the Restoration.

DECEMBER 19.

St Nemesion, and others, martyrs, 250. St Samthana, virgin and abbess, 738.

Born.—Charles William Scheele, distinguished chemist, 1742, *Stralsund*; Captain William Edward Parry, Arctic navigator, 1790, *Bath*.

Died.—Frederick Melchior, Baron Grimm, statesman and wit, 1807, *Gotha*; Benjamin Smith Barton, American naturalist, 1815; Augustus Pugin, architectural draftsman, 1832; Joseph Mallord William Turner, painter, 1851, *Chelsea*.

J. M. W. TURNER.

Joseph Mallord William Turner, R.A., was the son of a barber, and was born at his father's shop, in Maiden Lane, in London, in 1775. The friendly chat of the celebrities of the time in that room of frizzling and curling, persuaded Turner, the father, that his son would become a great man; so he gave him a very fair education, and in his rude way encouraged the lad's taste for art. The son formed a close friendship with a clever young artist like himself, Girtin, who would have been, had he lived, some critics say, his great rival. Turner himself used good-naturedly to assert: 'If poor Tom had lived, I should have starved.'

In 1789, Turner entered the Royal Academy as a student. After remaining there in that capacity

for five years, and working actively at his profession for other five, during which periods he sent to the exhibition no less than fifty-nine pictures, he was elected in 1799 an associate of the Royal Academy. In the two following years he exhibited fourteen pictures, and in 1802 was elected an academican. Till this date he had chiefly been known as a landscape painter in water-colours, but thenceforth he turned his attention to oil-painting, and in the ensuing half-century produced at the Academy exhibitions upwards of two hundred pictures. In 1807, he was elected professor of perspective in the Royal Academy, and the following year appeared his *Liber Studiorum*, or Book of Studies, which Charles Turner, Mr Lupton, and others, engraved. Other engraved works by him are his illustrations of Lord Byron's and Sir Walter Scott's poems; Roger's Italy and Poems; The Rivers of England; The Rivers of France, and Scenery of the Southern Coast. To enumerate the different paintings of Turner would be impossible. They have established him as the greatest of English landscape painters, and earned for him the appellation of the 'English Claude,' to whom, indeed, many of his admirers pronounce him superior. Among his more famous pictures, reference may specially be made to his 'Kilchurn Castle, Loch Awe,' 'The Tenth Plague of Egypt,' 'The Wreck of the *Minotaur*,' 'Calais Pier,' 'The Fighting *Temeraire* Tugged to her Last Berth,' 'The Grand Canal, Venice,' 'Dido and Eneas,' 'The Golden Bough,' 'Modern Italy,' 'The Fall of Carthage,' and 'The Building of Carthage.' The sea in all its varied aspects, but chiefly under that of gloom or tempests; bright sunny landscapes and noble buildings, lighted up by the glowing rays of the setting sun; and generally nature in her weird-like and unwonted moods, form the favourite themes of this great artist. Through all his productions the genius of a poet declares itself, impressing us with the same mysterious feeling of ineffable grandeur that we experience in reading the works of Dante or Milton. The eccentricity of his colouring and indefiniteness of his figures, rendering many of his later pictures, to ordinary observers, nothing more than a splash or unmeaning medley, have been frequently animadverted on; and with respect to the pictures executed during the last twenty years of his life, it cannot be denied, notwithstanding their unflinching suggestiveness, that much of this censure is well founded.

The Royal Academy treated Turner well, and he, in return, adhered to it devotedly to his death. But the prime of his life was spent in struggles with poverty, in unmerited obscurity, and battles with his employers. He had a rigid sense of justice, and a proud consciousness of his own merits and the dignity of his art. The pertinacity with which he exacted the last shilling in all cases made him seem mean. The natural way in which he continued to retain the simple, we might say uncouth, habits which poverty taught him, after he became wealthy, caused him to be branded as a miser. His gruff and peculiar ways, his honesty, as well as his proficiency, made him many enemies. But he lived to reach a high pinnacle of popularity, and to know himself fairly appreciated.

Turner's life is a strange story, a narrative at once painfully and pleasingly interesting. Many

seeds of human frailty, many taints of a vulgar origin were never uprooted, though ever kept in check by a truly noble soul. Turner was emphatically a child of nature. His faults were natural frailties not restrained, his virtues rather good impulses than acquired principles. When he rudely dismissed a beggar-woman, and then ran after her with a five-pound note, he furnished a key which unlocks his whole life.

We must set one thing against another. Turner was rough and blunt; yet of how many could it be said, that 'he was never known to say an ill word of any human being, never heard to utter one word of depreciation of a brother-artist's work?' Let the reader learn to wonder at Turner's greatness, by applying to himself such a test. A curious tale is told of his obstinacy. He was visiting at Lord Egremont's. He and his host quarrelled so desperately as to whether the number of windows in a certain building was six or seven, that the carriage was ordered, and Turner driven to the spot, to count them for himself, and be convinced of his mistake. But on another occasion, when Lord Egremont ordered up a bucket of water and some carrots, to settle a question about their swimming, Turner proved to be in the right.

He was fond of privacy, and on this subject Chantrey's stratagem, by which he got into the artist's studio, long remained a standing joke against Turner. There were some things, unhappily, connected with his private life, which were wisely kept concealed; and when, to an unknown residence, which he had at Chelsea, the old man retired at last to die, he was only discovered by his friends the day before his final journey.

Undoubtedly, Turner was fond of hoarding, but he was too great to become a miser. He hoarded his sketches even more eagerly than his sixpences. If he amassed £140,000, it was to leave it to found a charity for needy artists. This was his life's wish. If his grasping was great, his pride was greater. For when his grand picture of 'Carthage' was refused by some one, for whom it was painted to order, at the price of £100, Turner, in his pride, resolved to leave it to the nation. 'At a great meeting at Somerset House, where Sir Robert Peel, Lord Hardinge, and others were present, it was unanimously agreed to buy two pictures of Turner, and to present them to the National Gallery, as monuments of art for eternal incitement and instruction to artists and all art-lovers. A memorial was drawn up, and presented to Turner by his sincere old friend, Mr Griffiths, who exulted in the pleasant task. The offer was £5000 for the two pictures, the 'Rise,' and 'Fall of Carthage.' Turner read the memorial, and his eyes brightened. He was deeply moved: he shed tears; for he was capable, as all who knew him well knew, of intense feeling. He expressed the pride and delight he felt at such a noble offer from such men, but he added sternly, directly he read the word 'Carthage'—'No, no; they shall not have it,' at the same time informing Mr Griffiths of his prior intention.

All his friends loved him, and he was, really, as we have stated, no miser. There was silver found under his pillow, when he left any place he had been staying at; but this was because he was too sensitive to offer it to the servants in person. We read of him paying, of his own accord, for expensive

artist-dinners, of his giving a merry picnic, of his sending upwards of £20,000 secretly to the aid of a former patron.

Turner was generous-hearted, too, in other than pecuniary matters. He pulled his own picture down, to find a place for the picture of some insignificant young artist, whom he wished to encourage. He blackened a bright sky in one of his academy pictures, which hung between two of Lawrence's, so as to cast its merits into the shade. In this befouled condition, he allowed his own production to remain throughout the exhibition; and whispered to a friend, to allay his indignation: 'Poor Lawrence was so distressed; never mind, it'll wash off; it's only lampblack!'

His genuine affections were never drawn out. The history of his first love is a sad story of disappointment, enough to darken a life. He always stuck close to his old 'dad,' as he called him; but quitted, much to the old man's disappointment, a pleasant country-house and garden, for a dull house in town. The reason for this proceeding oozed out one day in conversation with a friend: 'Dad would work in the garden, and was always catching cold.'

This great artist's will, after all, was so loosely expressed, that its intentions were to a great extent frustrated, and the bulk of his property, which he had bequeathed for national and artistic purposes, was successfully claimed by his relatives. By a compromise, however, effected with the latter, the magnificent series of oil-paintings and drawings, known as the Turner Collection, have been secured for our national galleries as the most exalted trophies of British art.

'ALMANACS FOR THE ENSUING YEAR.'

The year is now drawing to its close, the Christmas festivities are in active preparation, and almost every one is looking forward with cheerful anticipation to the welcome variety from the regular pursuits and monotonous routine of ordinary life, which characterises the death of the Old year, and the birth of the New one. Youngsters at school are looking eagerly forward to the delights of home and the holidays—the intermission from study and scholastic restraint; the sliding, skating, and other sports of the season; the mince-pies, the parties, and the pantomimes. A universal bustle and anticipation everywhere prevails. Hampers with turkeys, geese, bacon, and other substantial provisions are coming up in shoals to town as presents from country friends; whilst barrels of pickled oysters, and boxes of cakes, dried fruits, and *bonbons* find their way in no less force to the provinces. Nor in thus providing for material and gastronomic enjoyment, are the more refined and intellectual cravings of humanity neglected. Christmas-books of all shapes, sizes, and subject-matter blaze forth magnificently in booksellers' windows, decked in all the colours of the rainbow, resplendent in all the gorgeousness of modern bookbinding, and displaying the grandest trophies of typographic and illustrative skill. The publishers of the various popular periodicals now put forth the 'extra Christmas number,' and the interest and curiosity excited by this last are shared with the graver and more business-like 'almanacs for the ensuing year.'

The time-honoured street-cry just quoted, may still be heard echoing through many of our public thoroughfares, though it is probably much less common now than it used to be, when itinerant venders of all kinds found a greater toleration from the authorities, and a far readier market with the public for their wares. In the present day, people generally resort to the regular book-sellers or stationers for their almanacs. Here purchasers of all means and tastes may be suited, whether they desire a large and comprehensive almanac, which, in addition to the mere calendar, may furnish them with information on all matters of business and general utility throughout the year, or whether they belong to that class whose humble wants in this direction are satisfied by the expenditure of a penny.

It is well known that the Stationers' Company of London enjoyed, in former times, a monopoly of the printing of all books; and long after this privilege

had gradually been withdrawn from them, they continued to assert the exclusive right of publishing almanacs; but this claim was successfully contested in 1775 by Thomas Carnan, a book-seller in St Paul's Churchyard, who obtained a decision against the company in the Court of Common Pleas, and this judgment was subsequently concurred in by parliament, after an animated discussion. The Stationers' Company continued the publication of almanacs with considerable profit to themselves, notwithstanding this infringement of what they deemed a vested right; and to the present day this branch of trade, the sole relic of a business which formerly comprehended the whole world of literature, forms, in spite of competition, a most profitable source of revenue to the association. The day on which the Stationers' Company issue their almanacs to the public (on or near the 22d November) presents a very animated and exciting scene, and is delineated

'ALMANAC DAY' AT STATIONERS' HALL.

in the accompanying engraving. We quote the following description from Knight's *London*: 'Let us step into Ludgate Street, and from thence through the narrow court on the northern side to the Hall. The exterior seems to tell us nothing, to suggest nothing, unless it be that of a very commonplace looking erection of the seventeenth century, and therefore built after the fire which destroyed everything in this neighbourhood; so we enter. Ha! here are signs of business. The

Stationers cannot, like so many of its municipal brethren, be called a dozing company; indeed it has a reputation for a quality of a somewhat opposite kind. All over the long tables that extend through the hall, which is of considerable size, and piled up in tall heaps on the floor, are canvas bales or bags innumerable. This is the 22d of November. The doors are locked as yet, but will be opened presently for a novel scene. The clock strikes, wide asunder start the gates,

and in they come, a whole army of porters, darting hither and thither, and seizing the said bags, in many instances as big as themselves. Before we can well understand what is the matter, men and bags have alike vanished—the hall is clear; another hour or two, and the contents of the latter will be flying along railways, east, west, north, and south; yet another day, and they will be dispersed throughout every city and town, and parish and hamlet of England; the curate will be glancing over the pages of his little book to see what promotions have taken place in the church, and sigh as he thinks of rectories, and deaneries, and bishoprics; the sailor will be deep in the mysteries of tides and new moons that are learnedly expatiated upon in the pages of his; the believer in the stars will be finding new draughts made upon that Bank of Faith, impossible to be broken or made bankrupt—his superstition as he turns over the pages of his Moore—but we have let out our secret. Yes, they are all *almanacs*—those bags contained nothing but almanacs: Moore's and Partridge's, and Ladies' and Gentlemen's, and Goldsmiths', and Clerical, and White's celestial, or astronomical, and gardening almanacs—the last, by the way, a new one of considerable promise, and we hardly know how many others. It is even so. The—at one time—printers and publishers of everything, Bibles, prayer-books, school-books, religion, divinity, politics, poetry, philosophy, history, have become at last publishers only of these almanacs and 'prognostications,' which once served but to eke out the small means of their poorer members. And even in almanacs they have no longer a monopoly. Hundreds of competitors are in the field. And, notwithstanding, the Stationers are a thriving company. In the general progress of literature, the smallest and humblest of its departments has become so important as to support in vigorous prosperity, in spite of a most vigorous opposition, the company, in which all literature—in a trading sense—was at one time centered and monopolised!

It is not necessary here to enter into the history of almanacs, a subject which has already been thoroughly discussed in the introduction to this work. We may remark, nevertheless, that till a comparatively recent period, the general subject-matter of which the majority of almanacs was composed, reflected little credit, either on the general progress of the nation in intelligence, or the renowned company by whom these books were supplied. The gross superstitions and even indecencies which disfigured *Poor Robin's Almanac*, and the predictions and other absurdities of the publications bearing the names of Partridge and Moore, continued to flourish with unimpaired vigour up to 1828. In that year, the Society for the Diffusion of Useful Knowledge issued in the *British Almanac* a quiet protest against the worthless pabulum hitherto supplied to the public. This new work both found extended favour with the public, and produced a signal reform in most of the popular almanacs. In the following year, *Poor Robin* disappeared altogether from the stage; a great portion of the astrology which pervaded the other almanacs was retrenched; and since that period the publications of the Stationers' Company have kept pace with the growing requirements and improved tastes of the age.

LONDON STREET NOMENCLATURE.

The sponsors of Old London performed their duties more conscientiously than most of their successors; as a consequence, the names of the older streets of the capital serve not only as keys to their several histories, but as landmarks by which we can measure the changes wrought by time in the topographical features of the city. The streams which once murmured pleasantly near the abodes of the Londoners have long since been degraded into sewers, but their memory is preserved in the streets of Fleet, Walbrook, and Holborn (old bourne), the ward of Lang-bourne, and the parish of St Marylebone—a corruption of St Mary-le-bourne. The favourite trysting-places of the youthful citizens, the wells to which they flocked in the sweet summer-time, have left their names to Clerkenwell, Holywell Street, Bridewell, and Monkwell Street; as the mineral springs have to Spa-fields and Bagnigge Wells Road. The wall that encompassed the city has disappeared, with all its gates, but London Wall, Aldgate, Aldersgate, Moorgate, Bishopsgate, Newgate, Cripplegate, and Ludgate, are still familiar words. Barbican marks the site of the ancient burgh-kenning or watch-tower. Covent Garden and Hatton Garden remind us that trees bore fruit and flowers once bloomed in these now stony precincts, while Vine Street (the site of the vineyard of the royal palace at Westminster), and Vinegar Yard, Drury Lane (originally Vine-garden Yard), speak of the still more distant day when the grape was cultivated successfully in town.

Cheapside was the principal market or chepe in London; the fish-market was held in Fish Street, the herb-market in Grass (Grace) Church Street, corn-dealers congregated in Cornhill, bakers in Bread Street, and dairymen in Milk Street. Friday Street takes its name from a fish-market opened there on Fridays. Goldsmith's Row, Silver Street, Hosier Street, Cordwainer Street (now Bow Lane), and the Poultry, were inhabited respectively by goldsmiths, silversmiths, stocking-sellers, boot-makers, and poulterers. Garlick Hill was famous for its garlic. In Sermon, or Shermonier's Lane, dwelt the cutters of the metal to be coined into pence. Ave-Maria Lane, Creed Lane, and Pater-noster Row, were occupied principally by the writers and publishers of books containing the alphabet, aves, creeds, and paternosters. Cloth-fair was the resort of drapers and clothiers, and the Haymarket justified its name until 1830, when the market was removed to another quarter.

The Northumberland lion still looks over Charing Cross, and a peer of the realm resides, or did reside a few years ago, in Islington, yet no one would look for a duke in Clerkenwell, or expect to find aristocratic mansions just out of the lord mayor's jurisdiction. Such associations were not always incongruous, the town-houses of the Earls of Aylesbury and the Dukes of Newcastle stood on the ground now occupied by Aylesbury and Newcastle Streets, Clerkenwell; Devonshire House did not give way to the square of that name (Bishopsgate Without) till the year 1690, and in earlier times the kingmaker feasted his dependents where Warwick Lane abuts on Newgate Street. Succumbing to fashion's constant cry of 'Westward

he! the old mansions of the nobility have been pulled down one by one, bequeathing their names to the houses erected on their sites. To this aristocratic migration London owes its squares of Bedford, Berkeley, Leicester, and Salisbury, and the streets rejoicing in the high-sounding names of Exeter, Grafton, Newport, Albemarle, Montague, Arundel, Argyll, Brooke, Burleigh, Chesterfield, and Coventry. Clare-market tells where the town-house of the Earls of Clare stood. Essex Street (Strand) takes its name from the mansion of Elizabeth's ill-fated favourite; Dorset Court (Fleet Street), from that of the poetical earl; and Scotland Yard marks the site of the lodging used by the kings of Scotland and their ambassadors. Bangor Court (Shoe Lane), Durham Street (Strand), Bonner's Fields, Ely Place (Holborn), and York Buildings (Strand) are called after long-vanished episcopal palaces. The religious houses of the Dominican, Augustine, White and Crouched Friars, have their memory preserved in Blackfriars, Austinfriars, Whitefriars, and Crutched-friars. Mincing-lane derived its name from certain tenements belonging to the nuns or *minchuns* of St Helen, and Spitalfields took its appellation from the neighbouring priory of St Mary Spital.

Euston Square, Fitzroy Square, Russell Square, Tavistock Street, Portland Place, and Portman Square, are named after the titles of the ground-landlords; one celebrated nobleman has thus commemorated both name and dignity in George Street, Villiers Street, Duke Street, Of Alley, and Buckingham Street. Woburn Square, Eaton Square, and Ecclestown Street, Pimlico, were named after the country-seats of the landowners who built them. Sometimes street names have been conferred in compliment to individuals more or less famous. Charles, King, and Henrietta Streets, Covent Garden, and Queen's Street, Lincoln's Inn Fields, were so styled in honour of Charles I. and his consort; Charles Street, James Square, was named after the Merry Monarch; York and James Streets (Covent Garden), after his brother. Rupert Street (Haymarket) was so designated after fiery Rupert of the Rhine; Princes Street, Wardour Street, after James I.'s eldest son, whose military garden occupied a portion of the site; Nassau Street, Soho, was so called in compliment to William III.; Queen's Square (Bloomsbury), after Queen Anne; and Hanover Square, in honour of her successor. Later, still, we have Regent Street, King William Street, Adelaide Street, with Victoria and Albert Streets without number. Theobald's Road was James I.'s route to his Hertfordshire hunting-seat; King's Road, Chelsea, George III.'s favourite road to Kew. The famous 'Mr Harley,' afterwards Earl of Oxford, gave Oxford Street its name; Denvill Street (Clare Market) was called after one of the five members whose attempted arrest by Charles I. was the commencement of the momentous struggle between King and Commons. The list of 'In Memoriam' streets is a long one; among them are Greville Street, Holborn—from Fulke Greville, the friend of Sir Philip Sidney; Hans Place and Sloane Street—after Sir Hans Sloane, the architect of the Bank of England, and Lord of Chelsea Manor; Southampton Street, Strand—in honour of Lady Rachel Russell, the model-wife, who was a daughter of the Earl of Southampton; Suffolk Street, Southwark—after Brandon, the earl of that

name, who married Henry VIII.'s sister, Mary; Stafford Row, Pimlico—from Lord Stafford, one of Oates's victims; Throgmorton Street—from Sir Nicholas Throgmorton, said to have been poisoned by the Earl of Leicester; Hare Court Temple—after Sir N. Hare, Master of the Rolls in the reign of Elizabeth; Cumberland Street and Gate—after the victor of Culloden Field. Literary celebrities come in for but a small share of brick-and-mortar compliments. Mrs Montagu, the authoress, lives in Montagu Place (Portman Square); Killigrew, the wit, has given his name to a court in Scotland Yard; and Milton has received the doubtful compliment of having the notorious Grub Street of the Dunciad days re-dedicated to him. The founder of the Foundling Hospital is justly commemorated in Great Coram Street; and Lamb, the charitable cloth-worker, who built a conduit at Holborn in 1577, has his munificence recorded in Lamb's Conduit Street. Downing Street takes its name from Sir George Downing, secretary to the treasury in 1667; and the once fashionable Bond Street was called after Henrietta Maria's comptroller of the household. Barton Booth, the Cato of Addison's tragedy, has left his name in Barton Street, Westminster; the adjacent Cowley Street, being called after his birthplace. These are not the only thoroughfares connected with the drama; the site of the old Fortune Theatre is marked by Playhouse Yard (Central Street); and that of the Red Bull Theatre, by Red Bull Yard (St John's Street Row). Globe Alley and Rose Alley are mementoes of those famous playhouses; while the Curtain Theatre is represented by the road of that name. Apollo Court, Fleet Street, reminds us of Jonson's glorious sons of Apollo. Spring Gardens (Charing Cross) was a favourite resort of pleasure-seekers in Pepy's time, but nought but its name is left now to recall its fame, a fate that has befallen its rival Vauxhall.

Old Street was the old highway to the north-eastern parts of the country. Knight Rider Street was the route of knights riding to take part in the Smithfield tournaments. Execution Dock, Wapping, was the scene of the last appearance of many a bold pirate and salt-water thief. Bowl Yard (St Giles's) was the spot where criminals were presented with a bowl of ale on their way to Tyburn. Finsbury and Moorfields were originally fens and moors; Houndsditch was an open ditch noted for the number of dead dogs cast into it; Shoreditch was known as Soersditch long before the goldsmith's frail wife existed. Paul's Chain owes its name to a chain or barrier that used to be drawn across St Paul's Churchyard, to insure quietness during the hours of divine worship. The Great and Little Turnstiles were originally closed by revolving barriers, in order to keep the cattle pastured in Lincoln's Inn Fields from straying into Holborn. The Sanctuary (Westminster) was once what its name implies. The Birdcage-Walk (St James's Park) derived its name from an aviary formed by James I. The aristocratic neighbourhood of May Fair is so called from the annual fair of St James, which was held there till the year 1809.

Corruption has done its work with street-names. The popular love of abbreviation has transformed the Via de Alwyck (the old name for Drury Lane) into Wych Street, and Gatherum into Gutter Lane, while vulgar mispronunciation has altered Desmond

into Deadman's Place, Sidon into Sything and Seething Lane, Candlewick into Cannon Street, Strypes Court (named after the historian's father) into Tripe Court, St Olave's into Tooley Street, Golding into Golden Square, Birchover into Birch Lane, Blanche-Appleton into Blind-chapel Court, and Knightengild Lane (so called from tenements pertaining to the knighten-guild created by Edgar the Saxon) into Nightingale Lane. Battersea figures in Domesday Book as Patricesy, passing to its present form through the intermediate ones of Baltrichsey and Battersey; Chelsea, known to the Saxons as Cealchylle, and to Sir Thomas More as Cheleith, is, according to Norden, 'so called from the nature of the place, whose strand is like the chesel, cœsel or cesol, which the sea casteth up, of sand and pebble stones, thereof called Cheselsey, briefly Chelsey.' In the fourteenth century, Kentish-town was known as Kaunteloe; Lambeth assumes the various shapes of Lamedh, Lamhee, Lamheth, and Lambyth; Stepney was once Stebenhede, and afterwards Stebenhythe; Islington took the form of Isendune, Iseldon or Eyseldon; Kensington was Chenesitune, and Knightsbridge appears in the reign of Edward III. as 'the town of Knighbrigg.' Other changes have been wrought by mere caprice. There may have been reasons for converting Petty France into New Broad Street, Dirty Street into Abingdon Street, Stinking Lane, otherwise Chick Lane, otherwise Blow-bladder Lane, otherwise Butcher-hall Lane, into King Edward Street, Knave's Acre into Poultney Street, Duck Lane into Duke Street, and Pedlar's Acre into Belvedere Road; but Cato Street (the scene of Thistlewood's conspiracy), Monmouth Street (celebrated for its frippery and second-hand garments), Dyot Street, and Shire Lane (which marked the line of boundary between the city and the county), might well have been left in possession of these old names; nothing has been gained by re-christening them Homer Street, Dudley Street, George Street, and Lower Scarle's Place.

DECEMBER 20.

St Philogonius, bishop of Antioch, confessor, 322. St Paul of Latrus, or Latra, hermit, 956.

Born.—John Wilson Croker, reviewer and miscellaneous writer, 1780, *Galway*.

Died.—Ignatius, bishop of Antioch, martyred at Rome, 107 A.D.; Bernard de Montfaucon, French antiquary, 1741; Louis the Dauphin, father of Louis XVI., 1765; Thomas Hill, patron of literary men, and prototype of Paul Pry, 1840, *Adelphi, London*.

THE SUPPRESSION OF STAGE-PLAYS.

On December 20, 1649, 'some stage-players in St John Street were apprehended by troopers, their clothes taken away, and themselves carried to prison.'—*Whitelocke's Memorials*.

When England was torn by civil strife, the drama had a hard struggle for existence. Its best supporters had more serious matters to attend to, and while its friends were scattered far and wide, its foes were in authority, and wielded their newly-won power without mercy. When the civil war

broke out, one of the first acts of parliament was the issuing, in September 1642, of the following:

'Ordinance of the Lords and Commons concerning Stage-plays.'

Whereas the distressed estate of Ireland, steeped in her own blood, and the distracted estate of England, threatened with a cloud of blood by a civil war, call for all possible means to appease and avert the wrath of God appearing in these judgments; amongst which fasting and prayer, having been often tried to be very effectual, have been lately, and are still, enjoined; and whereas public sports do not well agree with public calamities, nor public stage-plays with the seasons of humiliation, this being an exercise of sad and pious solemnity, and the other being spectacles of pleasure too commonly expressing lascivious mirth and levity; it is therefore thought fit, and ordered by the Lords and Commons in this Parliament assembled, that while these sad causes and set times of humiliation do continue, public stage-plays shall cease and be forborne. Instead of which are recommended to the people of this land the profitable and reasonable consideration of repentance, reconciliation, and peace with God, which probably will produce outward peace and prosperity, and bring again times of joy and gladness to these nations.'

It was not to be expected that this unwelcome ordinance would be submitted to in silence. *The Actors' Remonstrance* soon appeared, complaining of the inconsistency of parliament in closing well-governed theatres, used only by the best of the nobility and gentry, while it permitted the bear-gardens to remain unmolested, patronised, as they were, by boisterous butchers, cutting cobblers, hard-handed masons, and the like riotous disturbers of the public peace; and gave uncontrolled allowance to puppet-shows. After defending the play-houses against sundry charges of their assailants, the pamphleteer promises, on behalf of the poor disrespected players, that if they are re-invested in their houses, they will not admit any female whatsoever unless accompanied by her husband or some near relative; that they will reform the abuses in tobacco, and allow none to be sold, even in the threepenny galleries, except the pure Spanish leaf; that all ribaldry shall be expelled the stage; and for the actors, 'we will so demean ourselves as none shall esteem us of the ungodly, or have cause to repine at our actions or interludes; we will not entertain any comedian that shall speak his part in a tone as if he did it in derision of some of the pious, but reform all our disorders and amend all our amisses.'

The author of *Certain Propositions offered to the Consideration of the Honourable Houses of Parliament*, advises that (as there must necessarily be amusements at Christmas, whether parliament likes it or not) the authorities should declare they merely intended to reform, and not abolish the actor's calling, and to that end confine the plots of plays to scriptural subjects. He is evidently a royalist, and satirically suggests: 'Joseph and his brethren would make the ladies weep; that of David and his troubles would do pretty well for the present; and, doubtless, Susannah and the elders would be a scene that would take above any that were ever yet presented. It would not be amiss, too, if, instead of the music that plays between the acts, there were only a psalm sung for distinction sake. This might be easily brought to pass, if either the

court playwrights be commanded to read the Scriptures, or the city Scripture-readers be commanded to write plays.'

One half-serious argument used in favour of re-opening the theatres was that, by so doing, the ranks of the royal army would be materially weakened. Most of the leading actors of the day had, in fact, exchanged their stage-foils for weapons of a deadlier sort. Prince Rupert's regiment had in its ranks three of the most popular representatives of feminine parts—Burt being a cornet, Hart a lieutenant, and Shatterel quartermaster. Mohun became captain in another regiment; and Allen of the Cockpit was quartermaster-general at Oxford. Other players contrived, spite of the law, to eke out a precarious living by practising their profession by stealth. In 1644, the sheriffs dispersed an audience assembled at the Salisbury Court Theatre to witness Beaumont and Fletcher's *King and No King*; but the poor players still found such encouragement in defying the law, that a second ordinance was issued, instructing the civic authorities to seize all actors found plying their trade, and commit them to the common jail, to be sent to the sessions, and punished as rogues. This proving inefficacious, in 1647 a more stringent act was passed, by which it was enacted 'that all stage-players, and players of interludes, and common plays are, and shall be, taken for rogues, whether they be wanderers or no, and notwithstanding any licence whatsoever from the king, or any other person or persons, to that purpose.' The lord mayor, the sheriffs, and the justices of the peace were ordered to have all galleries, boxes, and seats, in any building used for theatrical representations, at once pulled down and demolished. A fine of five shillings was inflicted upon any person attending such illegal performances, all money taken at the doors was to be confiscated for the benefit of the poor of the parish; and last, but not least, any player caught in the act was to be publicly whipped, and compelled to find sureties for future good-behaviour. If he dared to offend a second time, he was to be considered an incorrigible rogue, 'and dealt with as an incorrigible rogue ought to be.'

For a time parliament seems to have attained its object in completely suppressing the drama, but as soon as the war was over, the actors who had passed through it unscathed returned to their old haunts; and these waifs and strays of the various old companies, uniting their forces in the winter of 1648, obtained possession of the *Cockpit* in Drury Lane, and attempted, in a quiet way, to supply the town with its favourite recreation. For a few days they were allowed to act without interference, but one afternoon, during the performance of *The Bloody Brother*, a troop of soldiers entered the house, turned the disappointed playgoers out, and carried the actors to prison in their stage-clothes. To prevent further infraction of the law, a provost-marshal was appointed, who was expressly instructed to seize all ballad-singers, and suppress all stage-plays.

Under the Protectorate, this stringency seems to have been relaxed. Plays were acted privately a little way out of town, and at Christmas and Bartholomew-tide, the players managed, by a little bribery, to have performances at the Red Bull, in St John Street. Friendly noblemen, too, often

allowed them to make use of their houses; Goffe, the woman-actor of the Blackfriars theatre, being employed to notify the time and place to all persons whom it might concern. As soon as Cromwell was dead, and the signs of the time gave augury of a restoration of the monarchy, the players grew bolder. Several plays were acted at the above-mentioned theatre in 1659, and by June 1660, the Cockpit was again opened by Rhodes, and the Salisbury Court Theatre by Beeston. When Charles was fairly seated on the throne, the drama was soon legalised by the granting of two patents, one to Sir W. Davenant, and the king's servants at Drury Lane, and the other to Killigrew and the duke's servants at Dorset Gardens—and so ended the puritanical suppression of stage-plays.

In the reign of Elizabeth, somewhere about the year 1580, there had been a partial suppression of theatres. Certain 'godly citizens and well-disposed gentlemen of London,' brought such a pressure to bear upon the city magistrates, that the latter petitioned her majesty to expel all players from London, and permit them to destroy every theatre within their jurisdiction. Their prayer was granted, and the several playhouses in Gracechurch Street, Bishopsgate Street, Whitefriars, Ludgate Hill, and near St Paul's, 'were quite put down and suppressed by these religious senators.' The houses outside the city-boundaries were, fortunately, in no way molested, or English literature would have been the poorer by some of Shakspeare's greatest works.

Whenever the plague made its appearance in London, the drama went to the wall; and as long as it stayed in town, the players were forced to be idle. Sir Henry Herbert's office-book contains the following memorandum:

'On Thursday morning the 23d of February, the bill of the plague made the number of forty-four, upon which decrease the king gave the players their liberty, and they began the 24th February 1636.

'The plague increasing, the players lay still until the 2d of October, when they had leave to play.'

Of course the closing of the theatres was rigidly enjoined during the Great Plague, but the court was only too glad to seize the earliest opportunity of opening them again. Pepys says, in his *Diary*, under date 20th November 1666.—'To church, it being Thanksgiving-day for the cessation of the plague; but the town do say, that it is hastened before the plague is quite over, there being some people still ill of it; but only to get ground of plays to be publicly acted, which the bishops would not suffer till the plague was over.'

A FLYING SHIP IN 1709.

In No. 56 of the *Evening Post*, a newspaper published in the reign of Queen Anne, and bearing date 20-22d December 1709, we find the following curious description of a *Flying Ship*, stated to have been lately invented by a Brazilian priest, and brought under the notice of the king of Portugal in the following address, translated from the Portuguese:

'Father Bartholomew Laurent says that he has found out an Invention, by the Help of which one may more speedily travel through the Air than

any other Way either by Sea or Land, so that one may go 200 Miles in 24 Hours; send Orders and Conclusions of Councils to Generals, in a manner, as soon as they are determined in private Cabinets; which will be so much the more Advantageous to your Majesty, as your Dominions lie far remote from one another, and which for want of Councils cannot be maintained nor augmented in Revenues and Extent.

Merchants may have their Merchandize, and send Letters and Packets more conveniently. Places besieged may be Supply'd with Necessaries and Succours. Moreover, we may transport out of such Places what we please, and the Enemy cannot hinder it:

The Portuguese have Discovered unknown Countries bordering upon the Extremity of the Globe: And it will contribute to their greater Glory to be Authors of so Admirable a Machine, which so many nations have in vain attempted.

Many Misfortunes and Shipwrecks have happened for want of Maps, but by this Invention the Earth will be more exactly Measur'd than

ever, besides many other Advantages worthy of your Majesty's Encouragement.

But to prevent the many Disorders that may be occasioned by the Usefulness of this Machine, Care is to be taken that the Use and full Power over the same be committed to one Person only, to whom your Majesty will please to give a strict Command, that whoever shall presume to transgress the Orders herein mentioned shall be Severely punished.

May it please your Majesty to grant your humble Petitioner the Privilege that no Person shall presume to Use, or make this Ship, without the Express Licence of the Petitioner, and his Heirs, under the Penalty of the loss and Forfeiture of all his Lands and Goods, so that one half of the same may belong to the Petitioner, and the other to the Informer. And this to be executed throughout all your Dominions upon the Transgressors, without Exception or Distinction of Persons, who likewise may be declared liable to an Arbitrary punishment, &c.'

Of this much-vaunted invention an engraving is

THE FLYING SHIP.

given in the same newspaper, and is here presented to the reader, who may probably be equally amused by the figure delineated, and the explanation of its uses, as subjoined.

An Explanation of the Figure.

- A. Represents the Sails wherewith the Air is to be divided, which turn as they are directed.
- B. The Stern to govern the Ship, that She may not run at random.
- C. The Body of the Ship which is formed at both ends Scollopwise; in the concavity of Each is a pair of Bellows, which must be blown when there is no Wind.
- D. Two Wings which keep the Ship upright.

E. The Globes of Heaven and Earth containing in them Attractive Virtues. They are of Metal, and serve for a Cover to two Loadstones, placed in them upon the Pedestals, to draw the Ship after them, the Body of which is of Thin Iron Plates, covered with Straw Mats, for conveniency of 10 or 11 men besides the Artist.

F. A cover made of Iron Wire in form of a Net, on which are Fastened a good number of Large Amber Beads, which by a Secret Operation will help to keep the Ship Aloft. And by the Sun's heat the aforesaid Mats that line the Ship will be drawn towards the Amber Beads.

G. *The Artist who by the help of the Celestial Globe, a Sea Map, and Compass, takes the Height of the Sun, thereby to find out the spot of Land over which they are on the Globe of the Earth.*

H. *The Compass to direct them in their Way.*

I. *The Pulleys and Ropes that serve to hoist or Furl the Sails.*

This extraordinary aerial locomotive is perhaps one of the most curious of these apparatuses for the purpose of flying, of which we find numerous instances from the middle ages downwards. A more extended knowledge of the laws of gravity, and the relations subsisting between us and the atmosphere surrounding our globe, has induced us to discard all such attempts at emulating the powers of the feathered tribes of creation as chimerical. By means of balloons, indeed, first made available by Montgolfier in the latter half of the eighteenth century, we have been enabled to overcome, in a limited degree, the obstacles which prevent us from soaring above the surface of the earth. But it is very significant, that whilst in all other means of locomotion we have made such rapid strides within the last hundred years, the science of aeronautics has advanced little beyond the point which it attained in the days of our grandfathers.

In connection with this subject, we may allude to a well-known story of an Italian charlatan who visited Scotland in the reign of James IV., and insinuated himself so successfully into the good graces of that monarch, as to be created abbot of Tunland. The following account of his proceedings is thus quaintly given by Bishop Lesley, and quoted by Mr Wilson in his *Prehistoric Annals of Scotland*. 'He causet the king believe that he, be multiplyinge and utheris his inventions, wold make fine golde of uther metall, quhilk science he callit the quintessence; quhairupon the king maid greit cost, bot all in vaine. This Abbott tuik in hand to flie with wingis, and to be in Fraunce befor the saidis ambassadouris; and to that effect he causet mak ane pair of wingis of fedderis, quhilkis beand fessenit apoun him, he flew of the Castell wall of Striveling [Stirling], bot shortlie he fell to the ground and brak his thee-bane. Bot the wyt [blame] thairof he ascryvit to that thair was sum hen fedderis in the wingis, quhilk yarnit and covet the mydding [dunghill] and not the skyis.' How far this very philosophical mode of accounting for the failure of his project was successful in maintaining his credit with James we are not informed, but we opine it were but a sorry solace for a broken limb. It is a little curious that, in the year 1777, a similar experiment is recorded to have been made at Paris, on a convict from the galleys. The man was surrounded with whirls of feathers, curiously interlaced, and extending gradually at suitable distances, in a horizontal direction from his feet to his neck. Thus accoutred, he was let down from a height of seventy Paris feet, descended slowly, and fell on his feet uninjured, in the presence of an immense body of spectators. He complained of a feeling like sea-sickness, but experienced no pain otherwise.

THE COMMONWEALTH OF HADES.

The aberrations of the human intellect have, perhaps, never assumed more extraordinary forms than in the history of magic and witchcraft. The

belief in demons has existed in all ages of known history, and among the pagan peoples, it was almost a more important part of the vocation of the priesthood to control the evil spirits than to conduct the worship of the beneficent deities; at all events, it was that ascribed faculty which gave them the greatest influence over their ignorant votaries. The introduction of Christianity did not discourage the belief in demons, but, on the contrary, it was the means of greatly increasing their numbers. Not only were the multifarious spirits of the then popular creeds, such as satyrs, wood-nymphs, elves, &c., accepted as demons, but all the false gods of the pagans were placed in the same category, and thus was introduced into mediæval magic a host of names of individual demons, taken from all countries, to the effect, necessarily, of creating very confused ideas on a subject which, in the olden time, had been tolerably clear even to the vulgar. When the learned men of the middle ages began to take demonology into their hands, they sought to reduce this confusion into order by arranging and classifying, and they soon produced an elaborate system of orders and ranks, and turned the infernal regions into a regular monarchy, modelled upon the empires of this world, with offices and dignities imitated from the same pattern. It was in the course of the fifteenth and sixteenth century that this system of a demoniacal commonwealth received its full development; and men like Johannes Wierus, who published his *Pseudomonarchia Dæmonum* in the latter of these two centuries, and the other writers of his class and of that period, were able to give a minute account of all its details. They are amusing enough, and the subject is, in many points of view, very interesting.

According to these writers, the emperor of the demons was Belzebuth or Belzebub. He is said to have been worshipped by the people of Canaan under the form of a fly, and hence he is said to have founded the Order of the Fly; the only order of knighthood which appears to have existed among the demons. When these writers became acquainted with Hades, a revolution had taken place there, and Satan, who had formerly been monarch, had been dethroned and Belzebub raised to his place. Satan had now placed himself at the head of the opposition party. Among the great princes were: 1. Eurynome, prince of death, and grand-cross of the order of the Fly. He was of course taken from the Greek mythology.—2. Moloch, prince of the country of tears, also grand-cross of the order, and member of the imperial council of state.—3. Pluto, prince of fire, and superintendent of the infernal punishments.—4. Leonard, grand-master of the Sabbaths, and inspector-general of magic and sorcery. He was a knight of the order of the Fly, and appeared often as a black man or negro.—5. Baalberith, 'master of the alliances,' and, according to some, secretary-general, and keeper of the archives of hell. The four previous named princes were demons of the first order; Baalberith was only of the second.—6. Proserpine, archduchess of Hades, and sovereign princess of the evil spirits.

The ministers of state of Belzebuth's court were: 1. Adramelec, grand-chancellor, and grand-cross of the order of the Fly.—2. Astaroth, grand-treasurer. 3. Nergal, chief of the secret police.—4. Baal, general-in-chief of the armies, and grand-cross of

the order of the Fly.—5. Leviathan, grand-admiral, and knight of the Fly.

Belzebuth had his ambassadors also, and their different appointments were, perhaps, intended to convey a little satire on the different countries to which they were sent. They were: 1. To France, Belphegor, an unclean demon, who often appeared in the form of a young woman; he was the demon of discoveries and ingenious inventions, and gave riches.—2. To England, Mammon, the demon of avarice, and the inventor of mining for metals.—3. To Turkey, Belial, one of the most vicious of all the demons.—4. To Russia, Rimmon, who was the chief physician at the court of Belzebuth.—5. To Spain, Thammuz, who was the inventor of artillery.—6. To Italy, Hutgin, a familiar demon, who took pleasure in obliging people.—7. To Switzerland, Martinet, who was especially familiar with magicians, and assisted travellers who had lost their way.

Among other high officers were, Lucifer, who was grand-justiciary and minister of justice; and Alastor, who held the distinguished office of executioner. The officers of the household of the princes were: Verdelet, master of the ceremonies, whose duty it was to convey the witches to the Sabbath; Succor Benoth, chief of the eunuchs, and the demon of jealousy; Chamos, grand-chamberlain, and the demon of flattery—he was knight of the Fly; Melchom, treasurer and payer of the public servants; Nisroch, chief of the kitchen; Behemoth, grand-cupbearer; Dagon, master of the pantry; and Mullin, principal valet-de-chambre. There were also certain ministers or officers of the privy-purse of Belzebuth, such as Kobal, director of the theatres, who was in this world the patron of comedians; Asmodeus, the superintendent of the gambling-houses; Nybbas, the grand-parodist, and who had also the management of dreams and visions; and Antichrist, who was the great juggler and necromancer of the shades.

With a court so complicated in its arrangements, and numerous in its officers, we might, perhaps, like to know what was the population of Belzebuth's empire. Wierus has not left us without full information, for he tells us that there are in hell, 6666 legions of demons, each legion composed of 6666 demons, which, therefore, makes the whole number amount to 44,435,556.

Whoever wishes for further information, need only have recourse to Johannes Wierus, and he may obtain as much as he can possibly desire. It must not be forgotten that these statements were at one time fully believed in by men of education and intellect.

DECEMBER 21.

St Thomas, apostle. St Edburge, virgin, 9th century.

St Thomas's Day.

The festival of St Thomas was instituted in the twelfth century, and, as an old author alleges, was assigned an early place in the ecclesiastical calendar from this apostle having been vouchsafed the most indisputable evidence of the resurrection. In

pictorial art, St Thomas is represented holding a builder's square, and in accordance with the following legend, he is regarded as the patron saint of architects and builders.—When St Thomas was at Cæsarea, our Lord appeared unto him, and said: 'The king of the Indies, Gondoforus, hath sent his provost, Abanes, to seek for workmen well versed in the science of architecture, who shall build for him a palace finer than that of the emperor at Rome. Behold now, I will send thee to him.' And St Thomas went, and Gondoforus commanded him to build a magnificent palace, and gave him much gold and silver for the purpose. The king went to a distant country, and was absent for two years; and St Thomas, meanwhile, instead of building a palace, distributed all the treasures intrusted to him among the poor and sick; and when the king returned he was full of wrath, and commanded that St Thomas should be seized and cast into prison, while he meditated for him a horrible death. Meantime, the brother of the king died, and the king resolved to erect for him a magnificent tomb; but the dead man, after that he had been dead four days, suddenly rose, sat upright, and said to the king: 'The man whom thou wouldst torture is a servant of God; behold, I have been in Paradise, and the angels shewed unto me a wondrous palace of gold, silver, and precious stones; and they said: This is the palace that Thomas the architect has built for thy brother King Gondoforus.' And when the king heard those words, he ran to the prison, and delivered the apostle, and then St Thomas said to him: 'Knowest thou not that they who would possess heavenly things have little care for the goods of this world? There are in heaven rich palaces without number, which were prepared from the beginning of the world for those who purchase the possession thereof through faith and charity. Thy riches, O king, may prepare thy way to such a place, but they cannot follow thee thither.' Like many other of the old saintly legends, this was never meant or assumed to be a matter-of-fact relation, but simply a parable or religious fiction, invented for the instruction of the people, and rendered the more impressive and striking by an exalted apostle being made the hero of the tale.

It is said that after the dispersion of the apostles, St Thomas preached the gospel to the Medes, Persians, Bactrians, Ethiopians, and Indians, among the latter of whom he suffered martyrdom at Melapoor, and was buried in a church, which he had caused to be erected in that city. Marco Polo, who travelled in the thirteenth century, says: 'In that province of Malabar, is the body of the glorious martyr St Thomas, the apostle, who there suffered martyrdom. It rests in a small city, not frequented by many merchants, because unsuited for the purposes of commerce; but, from devotional motives, a vast number both of Christians and Saracens resort thither. The Christians who perform this pilgrimage collect earth, which is of a red colour, from the spot where he was slain, and reverentially carry it away with them, often employing it afterwards in miracles, and giving it with water to the sick, by which many disorders are cured. A variety of miracles are daily performed at the tomb of St Thomas, through the interposition of the blessed apostle.'

Sir John Mandeville, in his travels, describes the

same country as 'a great kingdom containing many fair cities and towns. In that kingdom lies the body of St Thomas the apostle in flesh and bone, in a fair tomb, in the city of Calamy; for there he was martyred and buried. But men of Assyria carried his body into Mesopotamia, into the city of Edessa; and afterwards he was brought thither again. And the arm and the hand that he put to our Lord's side, when he appeared to him after his resurrection, is yet lying in a vessel without the tomb. By that hand they there make all their judgments. For, when there is any dissension between two parties, and each of them maintains his own cause, both parties write their causes on two bills, and put them in the hand of St Thomas; and, anon, the hand casts away the bill of the wrong cause, and holds still the bill with the right cause, and therefore men come from far countries to have judgments of doubtful causes.' The accompanying engraving, from an illumination in an ancient manuscript of Mandeville's travels, preserved in the Bibliothèque Imperiale of Paris, represents the judgment of St Thomas. And if the story be considered incredible, the writer can only quote Mandeville's own lines addressed to unbelievers thus:

'If scanty be my laud and praise,
And witless folk should call me liar,
For that my book contains strange lays,
I will not storm nor burst with ire.
Let him who credits not my tales,
Travel as far as I have been,
Then, may he tell if truth prevails,
In what I say that I have seen.'

St Thomas's Day falls on the winter solstice, the shortest day in the year, as expressed in the following couplet:

'St Thomas gray, St Thomas gray,
The longest night and the shortest day.'

In some parts of the country the day is marked by a custom, among poor persons, of *going a gooding*, as it is termed—that is to say, making the round of the parish in calling at the houses of their richer neighbours, and begging a supply either of money or provisions to procure *good things*, or the means of enjoying themselves at the approaching festival of Christmas. From this circumstance St Thomas's Day is in some places designated 'Doleing Day,' and in others 'Mumping [begging] Day.' In Warwickshire, the custom under notice used to be called *going a corning*, from the poor

people carrying with them a bag in which they received a contribution of corn from the farmers. By a correspondent of *Notes and Queries*, in 1857, we are informed that the custom of 'Gooding' exists in full force in Staffordshire, where not only the old women and widows, but representatives from every poor family in the parish, make their rounds in quest of alms. The clergyman is expected to give a shilling to each person, and

at all houses a subsidy is looked for either in money or kind. In some parts of the same county a sum of money is collected from the wealthier inhabitants of the parish, and placed in the hands of the clergyman and churchwardens, who on the Sunday nearest to St Thomas's Day, distribute it in the vestry under the name of 'St Thomas's Dole.' We learn also from another communi-

THE JUDGMENT OF ST THOMAS—FROM AN ILLUMINATION IN AN ANCIENT FRENCH MANUSCRIPT.

cation of the writer just quoted, that at Harrington, in Worcestershire, it is customary for children on St Thomas's Day to go round the village begging for apples, and singing—

'Wassail, wassail, through the town,
If you've got any apples, throw them down;
Up with the stocking, and down with the shoe,
If you've got no apples, money will do;
The jug is white and the ale is brown,
This is the best house in the town.'

In return for the alms bestowed during these 'gooding' peregrinations, it was customary for the recipients, in former times, to present to their benefactors a sprig of holly or mistletoe. A liberal dole was distributed at the 'great house,' or the mansion of the principal proprietor in the parish; and at the kitchens of all the squires and farmers' houses, tankards of spiced-ale were kept for the special refectory of the red-cloaked old wives who made in procession these foraging excursions on St Thomas's Day. It is said that the hospitality shewn on such occasions proved sometimes rather overpowering, and the recipients of this and other charitable benefactions found themselves occasionally wholly unable to find their way back to their own habitations, having been rendered, through the agency of John Barleycorn, as helpless as the 'Wee bit Wifkie' immortalised in Scottish song.

THE 'ADVENT IMAGES' AND THE 'VESSEL-CUP.'

In connection with the practice of 'going a gooding' on St Thomas's Day, described in the foregoing article, an account may here be given of a kindred custom which appears not yet to be

extinct—that of the 'Advent Images.' These are two dolls, dressed the one to represent the Saviour, and the other the Virgin Mary, and during the week before Christmas they are carried about the country by poor women, who, in return for their exhibition, expect a halfpenny, which it is considered as insuring the height of ill-luck to deny. The following carol is sung on the occasion by the bearers of the images :

'The first good joy that Mary had, it was the joy of one,

To see her own son Jesus to suck at her breast-bone;
It brings tidings of comfort and joy !

The next good joy that Mary had, it was the joy of two,

To see her own son Jesus to make the lame to go.
It brings, &c.

The next good joy that Mary had, it was the joy of three,

To see her own son Jesus to make the blind to see.
It brings, &c.

The next good joy that Mary had, it was the joy of four,

To see her own son Jesus to read the Bible o'er.
It brings, &c.

The next good joy that Mary had, it was the joy of five,

To see her own son Jesus to make the dead alive.
It brings, &c.

The next good joy that Mary had, it was the joy of six,

To see her own son Jesus to bear the crucifix !
It brings, &c.

The next good joy that Mary had, it was the joy of seven,

To see her own son Jesus to wear the crown of Heaven.
It brings, &c.'

This custom is also termed going about with a 'vessel-cup,' and the performers are styled 'vessel-cup singers.' The word 'vessel-cup' is evidently a corruption for 'wassail-cup,' and denotes the wish expressed on the occasion for the health and happiness of the party who bestows his charity on the exhibitor of the images. It may here be stated that in Yorkshire only one image used to be carried about—that of the Saviour, which was placed in a box surrounded by evergreens, and such flowers as could be procured at the season. The party to whose house the figure was carried was at liberty to take from the decorations of the image a leaf or a flower, which was carefully preserved, and regarded as a sovereign remedy for the toothache ! The following was one of the stanzas of the quaint old carol sung by the old women who carried the image :

'God bless the master of this house,
The mistress also,
And all the little children
That round the table go.'

Not only was it considered peculiarly unlucky to refuse the tribute claimed by the image-bearer, but it was even deemed an augury of bad fortune if any household was not visited by the 'Advent

Images' before Christmas Eve at the latest. The expression, 'As unhappy as the man who has seen no Advent Images,' was at one time proverbial in Yorkshire.

Born.—Thomas Becket, archbishop of Canterbury, 1117, London ; John Kepler, distinguished astronomer, 1571, Weil, Württemberg.

Died.—Giovanni Boccaccio, celebrated tale-writer, 1375, Certaldo ; Maximilien, Duke of Sully, minister of Henri IV., 1641, Villebon ; Catherine of Braganza, queen of Charles II. of England, 1705, Lisbon ; James Harris, author of *Hermes*, 1780 ; Arnauld de Berquin, author of *L'Ami des Enfants*, 1791, Paris ; Rev. Dr Harris, author of *Mammon, The Great Teacher*, &c., 1856, London.

CATHERINE OF BRAGANZA.

Many other women besides queens live miserable lives, but the insignificant possess one advantage over those nobler born—their sufferings are unobserved and uncommented on. The woman of rank is a subject for perpetual remark among those of her own class, the journals of the day keep the public well informed as to the minutest particulars of her history, and the rabble at the corners of every street shrug their shoulders as she passes.

Catherine of Braganza, the wife of Charles II., began life under favourable auspices. Reared in a palace, beautiful, possessed of ample dowry, the daughter of one king and the wife of another, loving her husband devotedly, and not herself displeasing in his eyes, she must have cast no unhopeful glance into the future ; yet at that very minute, fortune's wheel was turning. Twenty-three miserable years awaited her, each one worse and more hopeless than the one which preceded it. The neglect of the king, the scorn of his mistresses, the plots of courtiers, and the laughter of the world, combined to make the childless Catherine the most wretched of all women in her own gay and dissolute court.

Queen Catherine was born on the Festival of St Catherine, the 25th of November, in the year 1638. She arrived at Portsmouth in May 1662, where Charles was waiting to receive her. The marriage-ceremony was performed privately by the archbishop of Canterbury, and also a second time, with greater secrecy, according to the Romish ritual ; for the queen, who was a staunch Catholic, did not hold the first bond to be valid. After staying some weeks at Hampton Court, she made her public entry into London on the 23d of August. 'The queen,' says Evelyn, 'arrived, with a train of Portuguese ladies, in their monstrous fardingales, or guard-infantas ; their complexions olivader, and sufficiently disagreeable : her majesty in the same habit ; her foretop long, and turned aside very strangely. She was yet of the handsomest countenance of all the rest, and, though low of stature, prettily shaped ; languishing and excellent eyes ; her teeth wronging her mouth by sticking a little too far out ; for the rest, lovely enough.'

Many queens have arrived in England to be hated from the first moment of their appearance, but it was not so with Catherine. Charles had not made the first advances. The king of Portugal, having with difficulty recovered his crown out of the hands of Spain, found the same difficulty in retaining possession of it. Cromwell had driven

him to great straits, in revenge for assistance which he extended to Charles I. France, an old ally, had recently abandoned him. Thus, by proposing a marriage between Charles II. and the Infanta, he hoped to establish his power. On the other hand, Charles found the marriage profitable. He procured for England the possession of two important islands, and for himself the acceptable present of £500,000. All this was in the usual course of things. But the Infanta was pretty and agreeable, and a good Catholic, and Charles good-naturedly took a liking to her; and in this it was that her reception differed from that of Queen Caroline, or Anne of Cleves.

But twenty-three years of annoyance embittered the remembrance of their pleasant days. Charles, by wit and neglect, by urbanity and threats, broke her into her position; so that, from having treated his mistresses with disdain and resentment, she learned to endure them with coldness, and saw the Duchess of Cleveland a lady of the bed-chamber with patience. Despair prompted at length a sacrifice of self-respect, and she made them friends and confidantes; and finally, says Burnet, 'she went about masked, and came into houses unknown, and danced there, with a great deal of wild frolic.'

Strange to say, Charles never seems to have entertained any serious ill-feeling towards her, though we generally hate those whom we injure. He rejected, with disgust, the offer of Buckingham to carry her off to the West Indies, and procure a divorce on the plea of desertion, and despised the insinuations and charges of several who accused her of plotting with the Jesuits to take the king's life. And when he was on his death-bed, and the queen, whose grief drove her to distraction, asked pardon of her husband, if by any chance she had ever offended him, she gained at last this one poor consolation: 'Alas, poor woman,' he exclaimed, 'she beg my pardon! I beg hers with all my heart.'

Catherine survived the Revolution, remaining in England till the arrival of the Prince of Orange, and ultimately died at Lisbon on 21st December 1705.

THE MAIMING OF SIR JOHN COVENTRY.

A strange scene was enacted in London on the night of the 21st December 1669. Near Suffolk Street were assembled fifteen or twenty of his majesty's guards, mounted and unmounted, under the command of Sir Thomas Sands and the son of the Earl of Inchiquin. From ten o'clock to two, they waited impatiently for the coming of Sir John Coventry, whom they expected to pass on his way home from the tavern at which he supped. At length he came, and divining their hostile purpose at a glance, Sir John snatched a flambeau from his servant, and drawing his sword, placed his back against the wall, and bravely defended himself with both weapons. He succeeded in disabling O'Brian and some others of his assailants, but was forced to succumb to superior numbers. After they had disarmed him, the cowardly crew threw him down, and cutting his nose to the bone, left him.

This atrocious outrage was perpetrated in accordance with the orders of the Duke of Monmouth, Coventry's professed friend; but the actual instigator was Charles II. himself. In a parliamentary committee of Ways and Means, a motion

had been made: 'That towards the Supply, every one that resorts to any of the Playhouses who sits in the boxes, shall pay 1s.; every one who sits in the pit, shall pay 6d.; and every other person, 3d.' This was opposed by the court-party, on the ground that the players were the king's servants, and a part of his pleasure. Whereupon Sir John Coventry pertinently, but indiscreetly, asked: 'Whether the king's pleasure lay among the men or the women that acted?' This was touching Old Rowley too nearly to be pleasant, and it did not need much argument to persuade Charles, that if the offence was allowed to pass unpunished, reflections on royal weaknesses would become dangerously common. And so the king, forgetful of obligations incurred by the fugitive Charles Stuart, determined to make an example of Coventry, and carried out his resolve despite the remonstrances of his brother.

Bold Andrew Marvell could not let his pen lie idle upon such an event. In his *Instructions to a Painter*, he says:

'While the king of France with powerful arms,
Gives all his fearful neighbours strange alarms,
We, in our glorious bacchanals, dispose
The humbled fate of a plebeian nose.
Which to effect, when thus it was decreed,
Draw me a champion mounted on a steed;
And after him a brave brigade of horse
Armed at all points, ready to reinforce
His; this assault upon a single man.

* * * * *
'Tis this must make O'Brian great in story,
And add more beams to Sands's former glory.'

Parliament was furious at the indignity offered to one of its members on the very night after its adjournment, and made it the first subject for consideration upon re-assembling. The result of their deliberations was the passing of an act banishing the principal actors in the affair, with a special clause rendering them incapable of receiving the royal pardon; while to prevent a recurrence of the offence, the cutting, maiming, and disfiguring of any man was made felony without benefit of clergy, and punishable with death. The Coventry Act, as it was called, remained on the statute-book till the year 1828, when it was repealed.

It is a curious circumstance that Pepys records the fact of Sir William Coventry, uncle to Sir John, meditating, about nine months previous to the outrage on his nephew, a similar revenge to that taken by Charles. Sir William fancied that Killigrew intended to bring him upon the stage; and he accordingly gave the dramatist to understand that if any of his actors 'did offer anything like representing him, that he would not complain to my Lord Chamberlain, which was too weak, nor get him beaten as Sir Charles Sedley is said to have done, but that he would cause his nose to be slit.'

The Halcyon Days.

The seven days preceding, and the seven days following the shortest day, or the winter-solstice, were called by the ancients the *Halcyon Days*. This phrase, so familiar as expressive of a period of tranquillity and happiness, is derived from a fable, that during the period just indicated, while the halcyon bird or king-fisher was breeding, the sea

was always calm, and might be navigated in perfect security by the mariner. The name *halcyon* is derived from two Greek words—*αλς*, the sea; and *κυα*, to conceive; and, according to the poetic fiction, the bird was represented as hatching her eggs on a floating nest, in the midst of the waters. Dryden thus alludes to the notion:

‘Amidst our arms as quiet you shall be,
As halcyons brooding on a winter’s sea.’

DECEMBER 22.

St Ischyryon, martyr, 253. Saints Cyril and Methodius, confessors, end of 9th century.

Died.—Emperor Vitellius, beheaded at Rome, 69 A.D.; Richard Plantagenet, alleged son of Richard III., 1550, *Eastwell, Kent*; Richard Allein, Nonconformist divine, 1681; Michael Baron, celebrated actor, 1729, *Paris*; Sir Philip Francis, reputed author of *Junius*, 1818, *London*; Dr James Cowles Prichard, distinguished ethnologist, 1848, *London*; Rev. M. J. Routh, D.D., president of Magdalen College, Oxford, in his 100th year, 1854, *Oxford*.

THE ORIGINAL BLUEBEARD.

For more than a century and a half, Bluebeard has been a favourite melodramatic hero: favourite, that is, with those who wish to find a tyrant as a foil to some ill-used damsel or heroine; and the more savage he is, the more intense is the interest felt in the story—by boys and girls, if not by ‘children of larger growth.’ In this, as in some other histories, the more thoughtful readers occasionally ask—Is it true? There certainly was no real lady to say: ‘Sister Anne, sister Anne, do you see anybody coming?’ but nevertheless Mezeray, and other French writers, tell us of a man who really suggested to Perrault the idea for the story of *Bluebeard*.

Giles de Laval, Seigneur de Retz, better known in French history as Marshal de Retz, was born in or about the year 1396. Losing his father in 1416, Giles entered the service of his sovereign-prince, the Duc de Bretagne; and his name is found mentioned in connection with events in 1420 and 1425. He next entered the service of the French king, Charles VII., and was actively engaged in the defensive war maintained by that monarch against the English; distinguishing himself in many engagements. In 1429, he was one of the captains under the celebrated Joan of Arc; and aided her in bringing provisions into Orleans. We then hear of Giles, and his brother René, accompanying the king to Rheims; and it is supposed that Giles was on this occasion created Marshal of France, in recognition of his military merits. It was he who carried the holy *ampoule*, at the consecration of the king, from the abbey of St Remi to the cathedral. He appears also at this time to have been counsellor and chamberlain to the king. Again we hear of him commanding troops against the English in 1430 and 1433, in which last-named year his martial services appear to have terminated.

Now, there is nothing whatever in this career to denote a cruel or depraved taste: on the contrary, Giles de Laval presents himself to us as the

Marshal de Retz, a man of high birth, successful as a military commander, and in high favour at the court of the king of France. Yet the French annals tell us that this man, at the age of thirty-seven, commenced the abominable course of life which has brought infamy upon his name. When twenty years of age, he had inherited large estates from his father; at twenty-four, he had married Catherine de Thouars, who brought him still larger property; and when his maternal grandfather, Jean de Craon, died in 1432, another set of estates fell to him: inasmuch that Giles became the richest subject in France. This immense fortune was the grand cause of his ruin. He plunged into a course of profligacy and debauchery which diminished his wealth rapidly; and he sold one estate after another to defray his lavish expenses. He maintained a guard of honour of two hundred horsemen; and his suite, of fifty persons, comprised chaplains, choristers, musicians, pages, and *serviteurs*; most of whom were made ministers or accomplices in his acts of libertinism. Yet, withal, he affected great pomp and magnificence in religious ceremonies. His chapel was hung with cloth of gold and silk; the sacred vessels were of gold, and enriched with precious stones. His chaplains, habited in scarlet robes adorned with fur, bore the titles of dean, chanter, archdeacon, and bishop; and he even sent a deputy to the pope, to ask permission for a cross to be carried before him! These, and other extravagances, made such inroads on his wealth that he began to dispose of his estates one after another. His family, alarmed at this prodigal waste of means, in which they all had an interest, obtained a decree from the parliament of Paris, forbidding him to make any further alienations of his property.

Even at this stage we do not recognise in Giles de Retz what the world would call a monster; we see in him only a profligate spendthrift, who joined licentiousness with religious observances in a way not at all unusual in the middle ages. But the worst was approaching. Craving for wealth to supply his extravagance, he had recourse to alchemy. Failing, then, to discover the grand art of transmuting base metals into gold, he next turned his attention to magic or sorcery, under the guidance of an Englishman, named Messire Jean, and an Italian, named Francisco Prelati. He is reported to have now made a compact with Satan, offering to give, in return for boundless wealth, everything except his own life and soul: as regarded the lives and souls of others, he felt no scruple. It was at this time, according to the accounts which have descended to us, that he began to immolate children—even while fulfilling his religious duties in his chapel with careful precision. The poor little creatures, made the victims of his iniquity in various ways, were finally put to death, and their blood and hearts used as charms in diabolical rites. His myrmidons inveigled boys and girls from the neighbouring villages into his castle, and they were never afterwards seen. Other agents of his, during his tours from one to another of his castles in Bretagne, were wont to persuade poor peasants, who had beautiful children, to intrust them to the care of the marshal, who promised to attend to their advancement in life. The children were never again seen; and when outrages were made in consequence, the accomplices

in De Retz's iniquities sought to stifle them by threats or bribery. This continued so long, and the number of children who disappeared became so large, that the matter came under the notice and interference of the authorities. In 1440, the marshal was arrested, together with two of his men, Henri and Etienne Corillant. Confronted with his two accomplices, Giles at first denied all knowledge of them; but a threat of the torture having alarmed him, he made what is called a 'cleau breast of it' by revealing everything. The judges were frozen with horror at the obscene and atrocious recital which he made. There is no doubt as to the authenticity of the horrible transactions; and a biographer of the marshal, in the *Biographie Universelle*, states that manuscript reports of the trial (which lasted a month) exist in the Bibliothèque Imperiale at Paris, and also among the archives of the Chateau at Nantes. What the wretched young victims (who varied from eight to eighteen years of age) were made to endure before being put to death, cannot be described here. During a period of at least eight years, and at his several castles of Machecoul, Chantocé, and Tiffanges, as well as in his mansions at Nantes and Suze, were these atrocities carried on. In most cases he burned the bodies; but sufficient remains were found to indicate forty-six victims at Chantocé, and eighty at Machecoul. Giles did not boast of his atrocities; he confessed them, and publicly asked pardon of the parents of the murdered innocents. Condemned to be strangled, he exhibited once more a characteristic of his strange nature, by begging that the bishop of Nantes would head the procession which was formed on this occasion. His execution took place in 1440, about or a little before Christmas-day—some say December 22.

Probably on account of some personal peculiarity, Giles de Laval became remembered as *Barbe-bleue*, whence our *Bluebeard*. It seems to have speedily become a name of terror; for Holinshed, speaking of the committal of the Duke of Suffolk to the Tower, in the reign of Henry VI., says: 'This doing so much displeased the people, that if politic provision had not been made, great mischief had immediately ensued. For the commons, in sundry places of the realm, assembled together in great companies, and chose to them a captain, whom they called *Bluebeard*; but ere they had attempted any enterprise, their leaders were apprehended, so that the matter was pacified without any hurt committed.'

As to the children's *Bluebeard*, it was written by Perrault in the time of Louis XIV., and has been translated from the French into nearly all the languages of Europe. This *Bluebeard's* propensity is not to kill children, but to marry wife after wife in succession, kill them, and deposit them in the fatal closet which curiosity would not leave untouched. We all know how another victim was saved, and how *Bluebeard* met his death.

RICHARD PLANTAGENET.

December 22, 1550, died a poor working-man, named Richard Plantagenet, who was believed to be a son of Richard III., king of England. The story has been preserved by Dr Thomas Brett, who saw the entry of the man's death in the parish register of Eastwell, and who, about 1720, obtained

other particulars from the Earl of Winchelsea at Eastwell House.

Sir Thomas Moyle having, about 1545, purchased the estate of Eastwell, began to build the mansion alluded to. He was surprised to observe that one of the bricklayers, a man well advanced in years, was accustomed, on leaving off work, to take out a book and begin to read. Sir Thomas's curiosity was excited to know what book occupied the man's attention; but the extreme shyness of the student for some time baffled his desires. At length, taking him by surprise, he found, to his increased astonishment, that the man perused a Latin book. He then inquired how he came to be able to read a book in that language, and after some conversation, obtained from him a series of particulars which he said had hitherto been told to none.

He was, in his earliest years, boarded with a school-master, and there was occasionally visited by a gentleman, who paid regularly for his maintenance and education, but who did not let him know his parentage. At length, when he was about sixteen, this gentleman took him on a journey, and introduced him to a stately house, where another personage of distinguished appearance, and wearing a star and the order of the Garter, came to see him, conversed kindly with him, and then dismissed him. Some time after, he was conducted into Leicestershire, and brought before the king in his tent, in the midst of an army, and was surprised to find that the king was the same distinguished person whom he had lately seen. Richard embraced him, acknowledged him as his son, and said that if he should, as he hoped, survive the battle about to be fought, the son should be duly provided for; after which he was desired to take a position at some distance till the end of the conflict. The king also warned him, in the event of his defeat and death, to conceal the relationship now acknowledged, as it would be sure to be fatal to him.

Finding the battle go against King Richard, he made his way from the field, and as he entered Leicester, he saw a dead man brought in naked, laid across a horse, and learned that it was the monarch he had yesterday seen at the head of a gallant army.

Chance directed him into the occupation of a bricklayer, in which he had spent his life in contented obscurity.

Sir Thomas Moyle, feeling for the misfortunes of this scion of royalty, built a small house for him on his grounds, and requested him to take what food he should henceforth require from his kitchen. But it would appear that the old man did not live above three or four years in the enjoyment of the ease at last accorded to him.*

This story is of so romantic a nature, that it might well be doubted. Mr Jesse, however, in his *Memoirs of King Richard III.* (8vo, 1861), expresses a general faith in it, and shews several reasons for thinking it true. 'Anciently, when any person of noble family was interred at Eastwell, it was the custom to affix a special mark against the name of the deceased in the register of burials. The fact is a significant one, that this aristocratic symbol is prefixed to the name of Richard Plantagenet. At Eastwell, his story still excites curiosity and

* From Dr Brett's letter, in Peck's *Desiderata Curiosa*, 4to, p. 250.

interest. . . . A well in Eastwell Park still bears his name; tradition points to an uninscribed tomb in Eastwell churchyard as his last resting-place; and, lastly, the very handwriting which, more than three centuries ago, recorded his interment, is still in existence.'

In further connection with the subject of the Plantagenet family, Sir Bernard Burke, in his work, entitled *Vicissitudes of Families*, remarks: 'What race in Europe surpassed in royal position, personal achievement, or romantic adventure, our Plantagenets, equally wise as valiant, no less renowned in the cabinet than the field? Yet, as late as 1637, the great-grandson of Margaret Plantagenet, herself daughter and heir of George, Duke of Clarence, was following the cobbler craft at Newport, in Shropshire. Among the lineal descendants of Edmund Woodstock, Earl of Kent, son of Edward the First, entitled to quarter the royal arms, occur a butcher and a toll-gatherer, the first a Mr Joseph Smart, of Hales Owen (Salop), the latter Mr G. Wymot, keeper of the turnpike-gate, Cooper's Bank, Dudley. Among descendants of Thomas Plantagenet, Duke of Gloucester, son of Edward III., we discover Mr Penny, late sexton at St George's, Hanover Square—a strange descent from sword and sceptre to spade and pick.'

MRS MAPP, THE BONE-SETTER.

'Died last week, at her lodgings, near the Seven Dials, the much-talked of Mrs Mapps, the bone-setter, so miserably poor, that the parish was obliged to bury her.'—*London Daily Post*, 22d December 1737.

The subject of this melancholy obituary notice was for a time the object of popular wonder and enthusiasm. The daughter of a country bone-setter, she had, after wandering about from place to place, settled herself at Epsom, where she soon became famed for wonder-working cures—cures apparently effected more by boldness and personal strength than skill. She married a mercer's servant, but the match seems to have been an unfortunate one, for the *Grub-Street Journal* of April 19, 1736, says: 'We hear that the husband of Mrs Mapp, the famous bone-setter at Epsom, ran away from her last week, taking with him upwards of a hundred guineas, and such other portable things as lay next to his hand. Several letters from Epsom mention that the footman, whom the fair bone-setter married the week before, had taken a sudden journey from thence with what money his wife had earned; and that her concern at first was very great, but as soon as the surprise was over, she grew gay; and seems to think the money well disposed of, as it was like to rid her of a husband.' He must have been a bold man to marry her, and still bolder to have ventured to incur her wrath, if her portrait does her justice—a more ill-favoured, or a stronger-framed woman, it would have been difficult to find.

Her professional success, however, must have gone far to solace her for matrimonial failure. Besides driving a profitable trade at home, she used to drive to town once a week, in a coach-and-four, and return again bearing away the crutches of her patients as trophies of honour. She held her levees at the Grecian Coffee-house, where she operated successfully upon a niece of Sir Hans

Sloane. The same day, she straightened the body of a man whose back had stuck out two inches for nine years; and a gentleman who went into the house with one shoe-heel six inches high, came out again cured of a lameness of twenty years' standing, and with both his legs of equal length. She was not always so successful. One Thomas Barber, tallow-chandler, of Saffron Hill, thought proper to issue the following warning to her would-be patients:

'Whereas it has been industriously (I wish I could say truly) reported that I had found great benefit from a certain female bone-setter's performance, and that it was from a want of resolution to undergo the operation that I did not meet with a perfect cure;—This is to give notice, that any persons afflicted with lameness (who are willing to know what good and harm others may receive, before they venture on desperate measures themselves), will be welcome any morning to see the dressing of my leg, which was sound before the operation, and they will then be able to judge of the performance, and to whom I owe my present unhappy confinement to my bed and chair.'

The cure of Sir Hans Sloane's niece made Mrs Mapp the town-talk, and if it was only known that she intended to make one of the audience, the theatre favoured with her presence was sure to be crowded to excess. A comedy was announced at the Lincoln's Inn Fields Theatre, called *The Husband's Relief, or The Female Bone-setter and the Worm-doctor*. Mrs Mapp attended the first night, and was gratified at hearing a song in her praise, of which we give two verses as a specimen:

'You surgeons of London who puzzle your pates,
To ride in your coaches and purchase estates;
Give over for shame, for your pride has a fall,
And the doctress of Epsom has outdone you all.

Dame Nature has given her a doctor's degree,
She gets all the patients and pockets the fee;
So if you don't instantly prove it a cheat,
She'll loll in a chariot whilst you walk the street.'

She seems to have been accompanied on this occasion by two noted quacks—Ward the worm-doctor, and Taylor the oculist. A rhymster in the *Grub-street Journal*, alluding to this strange conjunction, says:

'While Mapp to th' actors shewed a kind regard,
On one side sat Taylor, on th' other side Ward.
When their mock persons of the drama came,
Both Ward and Taylor thought it hurt their game.
Wondering how Mapp could in good-humour be—
Zounds! cries the manly dame, it hurts not me,
Quacks, without art, may either blind or kill,
But demonstration shews that mine is skill.'

Mrs Mapp soon afterwards removed from Epsom to Pall Mall, but she did not forget her country friends. She gave a plate of ten guineas to be run for at Epsom, and went to see the race. Singularly enough, the first heat was won by a mare called 'Mrs Mapp,' which so delighted the doctress, that she gave the jockey a guinea, and promised to make it a hundred if he won the plate, but to his chagrin he failed to do so. The fair bone-setter's career was but a brief one. In 1736, she was at the height of her prosperity, and at the end of 1737, she died in the miserable circumstances set forth in our opening paragraph.

DECEMBER 23.

St Servulus, confessor, 590. The Ten Martyrs of Crete, 3d century. St Victoria, virgin and martyr, 250.

Born.—Heneage Finch, Earl of Nottingham, 1621; Robert Barclay, celebrated Quaker, author of the *Apology*, 1648, *Gordonstown, Morayshire*; Frederick Augustus of Saxony, 1750; Sir Martin Archer Shee, portrait-painter, 1770, *Dublin*; Alexander I., Emperor of Russia, 1777.

Died.—Childebert I., of France, 558, *Paris*; Henri de Lorraine, Duke of Guise, assassinated at Blois, 1588; William Davison, secretary of state to Queen Elizabeth, 1608; Michael Drayton, poet, 1631; James Sargent Storer, engraver, 1854, *London*.

THE EIKON BASILIKÉ.

‘On the 23d of December 1648, Richard Royston, the royal bookseller at the “Angel” in Ivy Lane, received the MS. copy of the *Eikon Basiliké* for the press.’ Such is the earliest date we find in connection with a book which became very famous during the turbulent times of the Commonwealth. Whether any copies were printed by the 30th of the ensuing month, the day when Charles I. was executed, is doubtful; but there is no doubt that it was largely in circulation soon afterwards, and that it produced a powerful effect on the Royalists. Most of them believed that the king wrote it; the peculiar character of the book, and the publishing of it by the king’s bookseller, encouraged this belief; nor were the active members of the court-party (for reasons presently to be noticed) at all anxious to disturb this favourite and favourable impression.

The work itself, which was the chief means of obtaining for Charles I. the designation of the ‘Royal Martyr,’ is a remarkable composition, by whomsoever written. M. Guizot, in his history of the events of those times, thus characterises it: ‘The manuscript had probably been perused, perhaps even corrected, by Charles himself, during his residence in the Isle of Wight. In any case, it was the real expression, and true portraiture of his position, character, and mind, as they had been formed by misfortune. It is remarkable for an elevation of thought which is at once natural and strained; a constant mingling of blind royal pride and sincere Christian humility; heart-impulses struggling against habits of obstinate self-consciousness; true piety in the midst of misguided conduct; invincible though somewhat inert devotion to his faith, his honour, and his rank; and as all these sentiments are expressed in monotonous language, which, though often emphatic, is always grave, tranquil, and even unctuous with serenity and sadness—it is not surprising that such a work should have profoundly affected all royalist hearts, and easily persuaded them that it was the king himself who addressed them.

There can be no doubt that Royalists and Parliamentarians were alike attracted by the *Eikon Basiliké*, though for different reasons. Appearing directly after the king’s death, and purporting to be a ‘Portraiture of his Sacred Majesty in his Solitudes and Sufferings,’ it could not fail to excite a deep interest in the faithful adherents of the House of Stuart. Even among many of Charles’s opponents his fate had excited strong sympathy; he was regarded as having been less in error than

some of his advisers; and there was a general tendency to forget his faults, and remember his virtues. ‘Hence,’ says Lord Macaulay (*‘Milton,’ Encyclopædia Britannica*), ‘the appearance of a work, professedly by his own hand—in which he is represented in the constant exercise of prayer, asserting the integrity of his motives before the Great Searcher of Hearts, and urging a fervent appeal from the injustice and cruelty of man to the justice and clemency of God—was eminently calculated to agitate the public mind in his favour, and to make every tongue vibrate in execration of his enemies.’ The Royalists unquestionably relied greatly on the effect which they expected to be produced by the book; and nearly fifty thousand copies of it were sold in England. On the other hand, the Puritans or Parliamentarians, alarmed at the effect on the public mind, desired Milton to write an answer to the *Eikon Basiliké*, with the view of shewing that, whether written by the king or not, its political reasonings were invalid. Milton accepted the duty; and hence his *Eikonoclastes*, or *Image Breaker*, one of the most celebrated of his works. The two books should be read together: the *Eikon Basiliké*, not as the production of the unfortunate king, but of the bishop of Exeter, Dr Gauden; and the *Eikonoclastes* (more frequently spelled *Iconoclastes* or *Iconoclast*) of Milton. There is reason to believe that Milton suspected the author of the *Eikon* to be some bishop or clergyman; but still he answered it as if it had been a royal production. Macaulay, less favourable than Guizot to the Royalists, thus characterises the *Iconoclast*: ‘Pressing closely on his antagonist, and tracing [tracking?] him step by step, he either exposes the fallacy of his reasonings, or the falsehood of his assertions, or the hollowness of his professions, or the convenient speciousness of his devotions. He discovers a quickness which never misses an advantage, and a keenness of remark which carries an irresistible edge. In argument and in style, the *Iconoclast* is equally masterly, being at once compressed and energetic, perspicuous and elegant. It is a work, indeed, which cannot be read by any man, whose reason is not wholly under the dominion of prejudice, without producing a conviction unfavourable to the royal party; and it justly merited the honourable distinction conferred upon it by royalist vengeance, of burning in the same flames with the *Defence of the People of England*.’

We have mentioned Dr Gauden, bishop of Exeter, as the author of the *Eikon Basiliké*. This is now known to have been the case, but the Royalists and High-Church party continued, to an advanced period, to foster the popular belief that the First Charles wrote it. The question was long a matter of literary discussion, and in the last century, we find Hume, in his *History of England*, advocating the claims of the king to the authorship, in preference to those of Dr Gauden. Moreover, it was a species of pious fraud, which the statesmen and churchmen deemed politic to encourage ‘for the public advantage.’ The late Sir James Mackintosh was of opinion that, irrespective of other testimony, the *Eikon* reads more like the production of a priest than of a king. ‘It has more of dissertation than effusion. It has more regular division and systematic order than agree with the habits of Charles. The choice and arrangement of words

shew a degree of care and neatness which are seldom attained but by a practised writer. The views of men and affairs, too, are rather those of a bystander than an actor; they are chiefly reflections, sometimes in themselves obvious, but often ingeniously turned, such as the surface of events would suggest to a spectator not too deeply interested. It betrays none of those strong feelings which the most vigilant regard to gravity and dignity could not have uniformly banished from the composition of an actor and a sufferer. It has no allusions to facts not accessible to any moderately-informed man: though the king must have (sometimes rightly) thought that his superior knowledge of affairs would enable him to correct vulgar mistakes.*

Numerous copies of the *Eikon Basiliké* are preserved in the public and private libraries of this country—not only on account of the curious circumstances connected with the work itself, but because it was customary to write on the fly-leaves, during the troubled period of the Commonwealth, melodies and other verses on the hapless monarch who had been decapitated. These inscriptions shewed that the grief was deep and sincere among those who thought the cry of ‘Church and King’ was the only one which could save the nation. Some went to the very extreme of adulation. One ran thus:

‘Nec Carolus Magnus
Nec Carolus Quintus
Sed Carolus Agnus
Hic jacet intus.’

Mr E. S. Taylor has described, in *Notes and Queries*, a copy of the work, containing two very curious *Chronostichons* in manuscript: that is, enigmas in which certain dates are denoted. Roman numerals, as most persons are aware, are letters of the alphabet, and may thus be used in two different ways. In one of the chronostichons here adverted to, the praises of Charles I. are celebrated, and at the same time the year 1648, in which, according to the old method of reckoning the commencement of the year he was executed, is denoted:

ReX pIVs et greX VerVs
ConDemnantVr InIqVe

The other embodies the year of the world (according to one system of chronology), namely, 5684, as that in which the king was executed:

TrIstIa perCharI Deploro fVnera RegIs
Inferna Ingratæ Detestor MVnera pLebIs
ReX DeCoLLatVr serVIs; qVIs taLLIa VerbIs
EXpLICet aVt possIt LaChryMIIs æqVare Labores
HIC pIetatIs honos, sIC RegeM In sCeptra reponVnt

These are to be thus understood. The letters in thick capitals denote the numerals; M, D, C, L, X, I, are to be interpreted in the way usual in Roman numerals; V serves both for *v* and *u* as a letter, and for 5 as a numeral. Each symbol is used separately: thus I X are 1 and 10, not 9; and I V are 1 and 5, not 4. We rather suspect that, in *Notes and Queries*, the (*m*) in the first chronostichon should have been printed in large type as a

numeral; and that an additional (*h*) in the second should also be in large type, to make up the quantities.

FAMILY OMENS OF DEATH.

The popular omens of death are almost innumerable, yet the appearance of any one of them is, according to rustic credulity, sufficient to foreshew the decease of any ordinary person in the middle or lower classes of society. For common people must be satisfied with common things. Even superstition knows how to pay due deference to rank and genealogy, and cunningly insinuates herself among the aristocracy, by contributing her mysterious influence to enhance the honours of rank and birth. Thus, among the *élite*, death-omens assume a special and distinctive shape, and, becoming a sort of household dependents, are never heard of but when they appear to do ‘suit and service’ to the respective families with which they are severally connected. So that the family, thus supernaturally honoured, while disdaining all vulgar omens of mortality, beholds the appearance of its own with dismay, feeling assured that death will soon visit some one of its members. Some of these family omens are curious and interesting. There still exists in Devon a family named Oxenham, with which such an omen is said to be connected. Prince, in his *Worthies of Devon*, speaking of this, says: ‘There is a family of considerable standing of this name at South Tawton, near Oakhampton, of which is this strange and wonderful thing recorded, that at the death of any of them, a bird with a white breast is seen for awhile fluttering about their beds, and then suddenly to vanish away. Mr James Howell tells us that, in a lapidary’s shop in London, he saw a large marble slab to be sent into Devonshire, with an inscription: “That John Oxenham, Mary his sister, James his son, and Elizabeth his mother, had each the appearance of such a bird fluttering about their beds as they were dying.”’*

There is a local ballad on this subject which is too long for insertion, but, as it is little known, a few extracts from it may be interesting. It begins thus:

‘Where lofty hills in grandeur meet,
And Taw meandering flows,
There is a sylvan, calm retreat,
Where erst a mansion rose.

There dwelt Sir James of Oxenham,
A brave and generous lord;
Benighted traveller never came
Unwelcome to his board.

In early life his wife had died,
A son he ne’er had known,
And Margaret, his age’s pride,
Was heir to him alone.

Margaret became affianced to a young knight, and their marriage-day was fixed. On the evening preceding it, her father gave a banquet to his friends, who, of course, congratulated him on the approaching happy union. He stood up to thank them, and in alluding to the young knight, so soon

* *Edinburgh Review*, 1826.

* See Howell’s *Familiar Letters*.

to be his daughter's husband, he jestingly called him his son :

'But while the dear, unpractised word
Still lingered on his tongue,
He saw a silvery-breasted bird
Fly o'er the festive throng.

Swift as the lightning's flashes fleet,
And lose their brilliant light,
Sir James sank back upon his seat,
Pale and entranced with fright.'

He, however, managed to conceal the cause of his embarrassment, and the next day the wedding-party assembled in the church, and the priest had begun the marriage-service :

'When Margaret with terrific screams
Made all with horror start—
Good heavens! her blood in torrents streams,
A dagger's in her heart!'

The deed had been done by a discarded lover, who, by the aid of disguise, had stationed himself just behind her. He drew the dagger from her breast, and, with a frantic laugh, exclaimed :

'Now marry me, proud maid, he cried;
Thy blood with mine shall wed;
He dashed the dagger in his side,
And at her feet fell dead.

Poor Margaret, too, grows cold with death,
And round her hovering flies
The phantom-bird for her last breath,
To bear it to the skies.'

The owl is one of the most usual omens of death among the commonalty; so, of course, it could not be received as a family omen among the aristocracy. As an honourable distinction, therefore, the dispenser of omens has assigned two owls, of enormous size, to premonish the noble family of Arundel of Wardour of approaching mortality. Whenever these two solemn spectres are seen perched on a battlement of the family mansion, it is too well known that one of its members will soon be summoned out of this world.

The ancient baronet's family of Clifton, of Clifton Hall, in Nottinghamshire, is forewarned that death is about to visit one of its members, by a sturgeon forcing itself up the river Trent, on whose bank their mansion is situated near to Clifton Grove, the scene of Henry Kirke White's poem of that title.

There is an ancient Roman Catholic family in Yorkshire, of the name of Middleton, which is said to be apprised of the death of any one of its members by the apparition of a Benedictine nun. Camden, in his *Magna Britannia*, after speaking of the illustrious antiquity of the Brereton family, says 'this wonderful thing respecting them is commonly believed, and I have heard it myself affirmed by many, that for some days before the death of the heir of the family, the trunk of a tree has always been seen floating in the lake adjoining their mansion.' On this omen, Mrs Hemans has some spirited stanzas, among which occur the following :

'Yes! I have seen the ancient oak
On the dark deep water cast,
And it was not felled by the woodman's stroke,
Or the rush of the sweeping blast;
For the axe might never touch that tree,
And the air was still as a summer sea.

'Tis fallen! but think thou not I weep
For the forest's pride o'erthrown;
An old man's tears lie far too deep,
To be poured for that alone!
But by that sign too well I know
That a youthful head must soon be low!

He must, he must! in that deep dell,
By that dark water's side,
'Tis known that ne'er a proud tree fell,
But an heir of his father's died.
And he—there's laughter in his eye,
Joy in his voice—yet he must die!

Say not 'tis vain! I tell thee, some
Are warned by a meteor's light,
Or a pale bird flitting calls them home,
Or a voice on the winds by night;
And they must go! and he too, he—
Woe for the fall of the glorious Tree!

In a note to the *Lady of the Lake*, Sir Walter Scott gives the following curious account from the manuscript memoirs of Lady Fanshaw. Her husband, Sir Richard, and herself, chanced, during their abode in Ireland, to visit a friend, the head of a sept, who resided in his ancient baronial castle, surrounded with a moat. At midnight, Lady Fanshaw was awakened by a ghostly and supernatural scream; and, looking out of bed, beheld, by the moonlight, a female face and part of the form hovering at the window. The distance from the ground, as well as the circumstance of the moat, excluded the possibility that what she beheld was of this world. The face was that of a young and rather handsome woman, but pale; and the hair, which was reddish, was loose and dishevelled. The dress, which Lady Fanshaw's terror did not prevent her remarking accurately, was that of the ancient Irish. This apparition continued to exhibit itself for some time, and then vanished with two shrieks similar to that which had first excited Lady Fanshaw's attention. In the morning, with infinite terror, she communicated to her host what she had witnessed, and found him prepared not only to credit, but to account for the apparition. 'A near relation of my family,' said he, 'expired last night in this castle. We disguised our certain expectation of the event from you, lest it should throw a cloud over the cheerful reception which was your due. Now, before such an event happens in this family and castle, the female spectre, whom you have seen, always is visible. She is believed to be the spirit of a woman of inferior rank, whom one of my ancestors degraded himself by marrying, and whom afterwards, to expiate the dishonour done to his family, he caused to be drowned in the castle-moat.' In his *Peveril of the Peak*, Sir Walter mentions a similar female spirit or ban-shee, said to attend on the Stanley family, warning them, by uttering a shriek, of some approaching calamity; and especially, 'weeping and bemoaning herself before the death of any person of distinction belonging to the family.'

It is unfortunate that so many of these ancient family omens have come down unaccompanied with the particulars that gave rise to them, which would have rendered them far more interesting. Now, we can scarcely see any connection between the omen and the family, or conceive why the things specified should have been considered omens of death at all.

DECEMBER 24.

St Gregory of Spoleto, martyr, 304. Saints Thrasilla and Emiliana, virgins.

Christmas Eve.

The eves or vigils of the different ecclesiastical festivals throughout the year are, according to the strict letter of canonical rule, times of fasting and penance; but in several instances, custom has appropriated them to very different purposes, and made them seasons of mirth and jollity. Such is the case with All-Saints' Eve, and perhaps even more so with Christmas Eve, or the evening before Christmas Day. Under the latter head, or 25th of December, will be found a special history of the great Christian festival; though the observances of both days are so intertwined together, that it becomes almost impossible to state, with precision, the ceremonies which are peculiar to each. We shall, however, do the best we can in the circumstances, and endeavour, under the 24th of December, to restrict ourselves to an account of the popular celebrations and customs which characterise more especially the eve of the Nativity.

With Christmas Eve, the Christmas holidays may practically be said to commence, though, according to ecclesiastical computation, the festival really begins on the 16th of December, or the day which is distinguished in the calendar as *O Sapientia*, from the name of an anthem, sung during Advent. It is proper, however, to state that there seems to be a discrepancy of opinion on this point, and that, in the judgment of some, the true Christmas festival does not commence till the evening before Christmas Day. The season is held to terminate on 1st of February, or the evening before the Purification of the Virgin (Candlemas Day), by which date, according to the ecclesiastical canons, all the Christmas decorations must be removed from the churches. In common parlance, certainly, the Christmas holidays comprehend a period of nearly a fortnight, commencing on Christmas Eve, and ending on Twelfth Day. The whole of this season is still a jovial one, abounding in entertainments and merry-makings of all sorts, but is very much changed from what it used to be with our ancestors in feudal times, when it was an almost unintermitted round of feasting and jollity.

For a picture of Christmas Eve, in the olden time, we can desire none more graphic than that furnished by Sir Walter Scott in *Marmion*.

'On Christmas Eve the bells were rung;
On Christmas Eve the mass was sung;
That only night, in all the year,
Saw the stoled priest the chalice rear.
The damsel donned her kirtle sheen;
The hall was dressed with holly green;
Forth to the wood did merry-men go,
To gather in the mistletoe.
Then opened wide the baron's hall
To vassal, tenant, serf, and all;
Power laid his rod of rule aside,
And Ceremony doffed his pride.
The heir, with roses in his shoes,
That night might village partner choose.
The lord, underogating, share
The vulgar game of 'post and pair.'

All hailed, with uncontrolled delight,
And general voice, the happy night,
That to the cottage, as the crown,
Brought tidings of salvation down!

The fire, with well-dried logs supplied,
Went roaring up the chimney wide;
The huge hall-table's oaken face,
Scrubbed till it shone, the day to grace,
Bore then upon its massive board
No mark to part the squire and lord.
Then was brought in the lusty brawn,
By old blue-coated serving-man;
Then the grim boar's-head frowned on high,
Crested with bays and rosemary.
Well can the green-garbed ranger tell,
How, when, and where the monster fell;
What dogs before his death he tore,
And all the baiting of the boar.
The wassail round in good brown bowls,
Garnished with ribbons, blithely trowls.
There the huge sirloin reeked: hard by
Plum-porridge stood, and Christmas-pye;
Nor failed old Scotland to produce,
At such high-tide, her savoury goose.
Then came the merry masquers in,
And carols roared with blithesome din;
If unmelodious was the song,
It was a hearty note, and strong.
Who lists may in their mumming see
Traces of ancient mystery;
White shirts supplied the masquerade,
And smutted cheeks the visors made;
But, oh! what masquers, richly dight,
Can boast of bosoms half so light!
England was merry England, when
Old Christmas brought his sports again.
'Twas Christmas broached the mightiest ale;
'Twas Christmas told the merriest tale;
A Christmas gambol oft could cheer
The poor man's heart through half the year.'

To investigate the origin of many of our Christmas customs, it becomes necessary to wander far back into the regions of past time, long ere Julius Caesar had set his foot on our shores, or St Augustine preached the doctrines of Christianity to the men of Kent. We have frequently, in the course of this work, had occasion to remark on the numerous traces still visible in popular customs of the old pagan rites and ceremonies. These, it is needless here to repeat, were extensively retained after the conversion of Britain to Christianity, partly because the Christian teachers found it impossible to wean their converts from their cherished superstitions and observances, and partly because they themselves, as a matter of expediency, ingrafted the rites of the Christian religion on the old heathen ceremonies, believing that thereby the cause of the Cross would be rendered more acceptable to the generality of the populace, and thus be more effectually promoted. By such an amalgamation, no festival of the Christian year was more thoroughly characterised than Christmas; the festivities of which, originally derived from the Roman Saturnalia, had afterwards been intermingled with the ceremonies observed by the British Druids at the period of the winter-solstice, and at a subsequent period became incorporated with the grim mythology of the ancient Saxons. Two popular observances belonging to Christmas are more especially derived from the worship of our pagan ancestors—the

hanging up of the mistletoe, and the burning of the Yule log.

As regards the former of these practices, it is well known that, in the religion of the Druids, the mistletoe was regarded with the utmost veneration, though the reverence which they paid to it seems to have been restricted to the plant when found growing on the oak—the favourite tree of their divinity Tutanés—who appears to have been the same as the Phenician god Baal, or the sun, worshipped under so many different names by the various pagan nations of antiquity. At the period of the winter-solstice, a great festival was celebrated in his honour, as will be found more largely commented on under our notice of Christmas Day. When the sacred anniversary arrived, the ancient Britons,

accompanied by their priests, the Druids, sallied forth with great pomp and rejoicings to gather the mystic parasite, which, in addition to the religious reverence with which it was regarded, was believed to possess wondrous curative powers. When the oak was reached on which the mistletoe grew, two white bulls were bound to the tree, and the chief Druid, clothed in white (the emblem of purity), ascended, and, with a golden knife, cut the sacred plant, which was caught by another priest in the folds of his robe. The bulls, and often also human victims, were then sacrificed, and various festivities followed. The mistletoe thus gathered, was divided into small portions, and distributed among the people, who hung up the sprays over the entrances to their dwellings, as a propitiation and shelter to

the sylvan deities during the season of frost and cold. These rites in connection with the mistletoe, were retained throughout the Roman dominion in Britain, and also for a long period under the sovereignty of the Jutes, Saxons, and Angles.

The following legend regarding the mistletoe, from the Scandinavian mythology, may here be introduced: Balder, the god of poetry and eloquence, and second son of Odin and Friga, communicated one day to his mother a dream which he had had, intimating that he should die. She (Friga), to protect her son from such a contingency, invoked all the powers of nature—fire, air, earth, and water, as well as animals and plants—and obtained an oath from them that they should do Balder no hurt. The latter then went and took his place amid the combats of the gods, and fought

without fear in the midst of showers of arrows. Loake, his enemy, resolved to discover the secret of Balder's invulnerability, and, accordingly, disguising himself as an old woman, he addressed himself to Friga with complimentary remarks on the valour and good-fortune of her son. The goddess replied that no substance could injure him, as all the productions of nature had bound themselves by an oath to refrain from doing him any harm. She added, however, with that awkward simplicity which appears so often to characterise mythical personages, that there was one plant which, from its insignificance, she did not think of conjuring, as it was impossible that it could inflict any hurt on her son. Loake inquired the name of the plant in question, and was informed that it was a feeble little shoot, growing

on the bark of the oak, with scarcely any soil. Then the treacherous Loake ran and procured the mistletoe, and, having entered the assembly of the gods, said to the blind Heda: 'Why do you not contend with the arrows of Balder?' Heda replied: 'I am blind, and have no arms.' Loake then presented him with an arrow formed from the mistletoe, and said: 'Balder is before thee.' Heda shot, and Balder fell pierced and slain.

The mistletoe, which has thus so many mystic associations connected with it, is believed to be propagated in its natural state by the *missel-thrush*, which feeds upon its berries. It was long thought impossible to propagate it artificially, but this object has been attained by bruising the berries, and by means of their viscosity, causing them to adhere to the bark of fruit-trees, where they readily germinate and take root. The growth of the mistletoe on the oak is now of extremely rare occurrence, but in the orchards of the west-midland counties of England, such as the shires of Gloucester and Worcester, the plant flourishes in great frequency and luxuriance on the apple-trees. Large quantities are annually cut at the Christmas season, and despatched to London and other places, where they are extensively used for the decoration of houses and shops. The special custom connected with the mistletoe on Christmas Eve, and an indubitable relic of the days of Druidism, handed down through a long course of centuries, must be familiar to all our readers. A branch of the mystic plant is suspended from the wall or ceiling, and any one of the fair sex, who, either from inadvertence, or, as possibly may be insinuated, *on purpose*, passes beneath the sacred spray, incurs the penalty of being then and there kissed by any lord of the creation who chooses to avail himself of the privilege.

The burning of the Yule log is an ancient Christmas ceremony, transmitted to us from our Scandinavian ancestors, who, at their feast of *Juhl*, at the winter-solstice, used to kindle huge bonfires in honour of their god Thor. The custom, though sadly shorn of the 'pomp and circumstance' which formerly attended it, is still maintained in various parts of the country. The bringing in and placing of the ponderous block on the hearth of the wide chimney in the baronial hall was the most joyous of the ceremonies observed on Christmas Eve in feudal times. The venerable log, destined to crackle a welcome to all-comers, was drawn in triumph from its resting-place at the feet of its living brethren of the woods. Each wayfarer raised his hat as it passed, for he well knew that it was full of good promises, and that its flame would burn out old wrongs and heartburnings, and cause the liquor to bubble in the wassail-bowl, that was quaffed to the drowning of ancient feuds and animosities. So the Yule-log was worthily honoured, and the ancient bards welcomed its entrance with their minstrelsy. The following ditty, appropriate to such an occasion, appears in the Sloane Manuscripts. It is supposed to be of the time of Henry VI.:

'WELCOME YULE.

Welcome be thou, heavenly King,
Welcome born on this morning,
Welcome for whom we shall sing,
Welcome Yule,

Welcome be ye Stephen and John,
Welcome Innocents every one,
Welcome Thomas Martyr one,
Welcome Yule.

Welcome be ye, good New Year,
Welcome Twelfth Day, both *in fere*,*
Welcome saints, loved and dear,
Welcome Yule.

Welcome be ye, Candlemas,
Welcome be ye, Queen of Bliss,
Welcome both to more and less,
Welcome Yule.

Welcome be ye that are here,
Welcome all, and make good cheer,
Welcome all, another year,
Welcome Yule.'

And here, in connection with the festivities on Christmas Eve, we may quote Herrick's inspiring stanzas:

'Come bring with a noise,
My merry, merry boys,
The Christmas log to the firing,
While my good dame she
Bids ye all be free,
And drink to your heart's desiring.

With the last year's brand
Light the new block, and,
For good success in his spending,
On your psalteries play
That sweet luck may
Come while the log is a teending.†

Drink now the strong beer,
Cut the white loaf here,
The while the meat is a shredding;
For the rare mince-pie,
And the plums stand by,
To fill the paste that's a kneading.'

The allusion at the commencement of the second stanza, is to the practice of laying aside the half-consumed block after having served its purpose on Christmas Eve, preserving it carefully in a cellar or other secure place till the next anniversary of Christmas, and then lighting the new log with the charred remains of its predecessor. The due observance of this custom was considered of the highest importance, and it was believed that the preservation of last year's Christmas log was a most effectual security to the house against fire. We are further informed, that it was regarded as a sign of very bad-luck if a squinting person entered the hall when the log was burning, and a similarly evil omen was exhibited in the arrival of a bare-footed person, and, above all, of a flat-footed woman! As an accompaniment to the Yule log, a candle of monstrous size, called the *Yule Candle*, or *Christmas Candle*, shed its light on the festive-board during the evening. Brand, in his *Popular Antiquities*, states that, in the buttery of St John's College, Oxford, an ancient candle socket of stone still remains, ornamented with the figure of the Holy Lamb. It was formerly used for holding the Christmas Candle, which, during the twelve nights of the Christmas festival, was burned on the high-table at supper.

* In company.

† Burning.

In Devonshire, the Yule log takes the form of the *ashton fagot*, and is brought in and burned with great glee and merriment. The fagot is composed of a bundle of ash-sticks bound or hooped round with bands of the same tree, and the number of these last ought, it is said, to be nine. The rods having been cut a few days previous, the farm-labourers, on Christmas Eve, sally forth joyously, bind them together, and then, by the aid of one or two horses, drag the fagot, with great rejoicings, to their master's house, where it is deposited on the spacious hearth which serves as the fireplace in old-fashioned kitchens. Fun and jollity of all sorts now commence, the members of the household—master, family, and servants—seat themselves on the settles beside the fire, and all meet on terms of equality, the ordinary restraint characterising the intercourse of master and servant being, for the occasion, wholly laid aside. Sports of various kinds take place, such as jumping in sacks, diving in a tub of water for apples, and jumping for cakes and treacle; that is to say, endeavouring, by springs (the hands being tied behind the back), to catch with the mouth a cake, thickly spread with treacle, and suspended from the ceiling. Liberal libations of cider, or *egg-hot*, that is, cider heated and mixed with eggs and spices, somewhat after the manner of the Scottish *het-pint*, are supplied to the assembled revellers, it being an acknowledged and time-honoured custom that for every *crack* which the bands of the *ashton fagot* make in bursting when charred through, the master of the house is bound to furnish a fresh bowl of liquor. To the credit of such gatherings it must be stated that they are characterised, for the most part, by thorough decorum, and scenes of inebriation and disorder are seldom witnessed. One significant circumstance connected with the vigorous blaze which roars up the chimney on Christmas Eve ought not to be forgotten. We refer to the practice of most of the careful Devonshire housewives, at this season, to have the kitchen-chimney swept a few days previously, so as to guard against accidents from its taking fire. In Cornwall, as we are informed by a contributor to *Notes and Queries*, the Yule log is called 'the mock,' and great festivities attend the burning of it, including the old ceremony of lighting the block with a brand preserved from the fire of last year. We are informed also that, in the same locality, Christmas Eve is a special holiday with children, who, on this occasion, are allowed to sit up till midnight and 'drink to the mock.'

Another custom in Devonshire, still practised, we believe, in one or two localities on Christmas Eve, is for the farmer with his family and friends, after partaking together of hot cakes and cider (the cake being dipped in the liquor previous to being eaten), to proceed to the orchard, one of the party bearing hot cake and cider as an offering to the principal apple-tree. The cake is formally deposited on the fork of the tree, and the cider thrown over the latter, the men firing off guns and pistols, and the women and girls shouting—

'Bear blue, apples and pears enow,
Barn fulls, bag fulls, sack fulls.
Hurrah! hurrah! hurrah!'

A similar libation of spiced-ale used to be sprinkled on the orchards and meadows in Norfolk;

and the author of a very ingenious little work, published some years ago,* states that he has witnessed a ceremony of the same sort, in the neighbourhood of the New Forest in Hampshire, where the chorus sung was—

'Apples and pears with right good corn,
Come in plenty to every one,
Eat and drink good cake and hot ale,
Give Earth to drink and she'll not fail.'

From a contributor to *Notes and Queries*, we learn that on Christmas Eve, in the town of Chester and surrounding villages, numerous parties of singers parade the streets, and are hospitably entertained with meat and drink at the different houses where they call. The farmers of Cheshire pass rather an uncomfortable season at Christmas, seeing that they are obliged, for the most part, during this period, to dispense with the assistance of servants. According to an old custom in the county, the servants engage themselves to their employers from New-Year's Eve to Christmas Day, and then for six or seven days, they leave their masters to shift for themselves, while they (the servants) resort to the towns to spend their holidays. On the morning after Christmas Day hundreds of farm-servants (male and female) dressed in holiday attire, in which all the hues of the rainbow strive for the mastery, throng the streets of Chester, considerably to the benefit of the tavern-keepers and shop-keepers. Having just received their year's wages, extensive investments are made by them in smock-frocks, cotton dresses, plush-waistcoats, and woollen shawls. Dancing is merrily carried on at various public-houses in the evening. In the whole of this custom, a more vivid realisation is probably presented than in any other popular celebration at Christmas, of the precursor of these modern jovialities—the ancient Roman Saturnalia, in which the relations of master and servant were for a time reversed, and universal licence prevailed.

Among Roman Catholics, a mass is always celebrated at midnight on Christmas Eve, another at daybreak on Christmas Day, and a third at a subsequent hour in the morning. A beautiful phase in popular superstition, is that which represents a thorough prostration of the Powers of Darkness as taking place at this season, and that no evil influence can then be exerted by them on mankind. The cock is then supposed to crow all night long, and by his vigilance to scare away all malignant spirits. The idea is beautifully expressed by Shakspeare, who puts it in the mouth of Marcellus, in *Hamlet*—

'It faded on the crowing of the cock.
Some say, that ever 'gainst that season comes
Wherein our Saviour's birth is celebrated,
The bird of dawning singeth all night long:
And then, they say, no spirit can walk abroad;
The nights are wholesome; then no planets strike,
No fairy takes, nor witch hath power to charm;
So hallow'd and so gracious is the time.'

A belief was long current in Devon and Cornwall, and perhaps still lingers both there and in other remote parts of the country, that at midnight, on Christmas Eve, the cattle in their stalls fall down on their knees in adoration of the

* *The Christmas Book: Christmas in the Olden Time: Its Customs and their Origin* (London, 1859).

infant Saviour, in the same manner as the legend reports them to have done in the stable at Bethlehem. Bees were also said to sing in their hives at the same time, and bread baked on Christmas Eve, it was averred, never became mouldy. All nature was thus supposed to unite in celebrating the birth of Christ, and partake in the general joy which the anniversary of the Nativity inspired.

THE CHRISTMAS-TREE : CHRISTMAS EVE IN GERMANY AND AMERICA.

In Germany, Christmas Eve is for children the most joyous night in the year, as they then feast their eyes on the magnificence of the Christmas-tree, and rejoice in the presents which have been provided for them on its branches by their parents and friends. The tree is arranged by the senior members of the family, in the principal room of the house, and with the arrival of evening the children are assembled in an adjoining apartment. At a given signal, the door of the great room is thrown open, and in rush the juveniles eager and happy. There, on a long table in the centre of the room, stands the Christmas-tree, every branch glittering with little lighted tapers, while all sorts of gifts and ornaments are suspended from the branches, and possibly also numerous other presents are deposited separately on the table, all properly labelled with the names of the respective recipients. The Christmas-tree seems to be a very ancient custom in Germany, and is probably a remnant of the splendid and fanciful pageants of the middle ages. Within the last twenty years, and apparently since the marriage of Queen Victoria with Prince Albert, previous to which time it was almost unknown in this country, the custom has been introduced into England with the greatest success, and must be familiar to most of our readers. Though thoroughly an innovation on our old Christmas customs, and partaking, indeed, somewhat of a prosaic character, rather at variance with the beautiful poetry of many of our Christmas usages, he would be a cynic indeed, who could derive no pleasure from contemplating the group of young and happy faces who cluster round the Christmas-tree.

S. T. Coleridge, in a letter from Ratzeburg, in North Germany, published in the *Friend*, and quoted by Hone, mentions the following Christmas customs as observed in that locality. Part of them seems to be derived from those ceremonies proper to St Nicholas's Day, already described under 6th December. 'There is a Christmas custom here which pleased and interested me. The children make little presents to their parents, and to each other, and the parents to their children. For three or four months before Christmas, the girls are all busy, and the boys save up their pocket-money to buy these presents. What the present is to be, is cautiously kept secret; and the girls have a world of contrivances to conceal it—such as working when they are out on visits, and the others are not with them; getting up in the morning before daylight, &c. Then, on the evening before Christmas-day, one of the parlours is lighted up by the children, into which the parents must not go; a great yew-bough is fastened on the table at a little distance from the wall, a multitude of little tapers are fixed in the bough, but not so as to burn it till

they are nearly consumed, and coloured paper, &c., hangs and flutters from the twigs. Under this bough the children lay out, in great order, the presents they mean for their parents, still concealing in their pockets what they intend for each other. Then the parents are introduced, and each presents his little gift; they then bring out the remainder, one by one, from their pockets, and present them with kisses and embraces. Where I witnessed this scene, there were eight or nine children, and the eldest daughter and the mother wept aloud for joy and tenderness; and the tears ran down the face of the father, and he clasped all his children so tight to his breast, it seemed as if he did it to stifle the sob that was rising within it. I was very much affected. The shadow of the bough and its appendages on the wall, and arching over on the ceiling, made a pretty picture; and then the raptures of the very little ones, when at last the twigs and their needles began to take fire and snap—O! it was a delight to them! On the next day (Christmas-day), in the great parlour, the parents lay out on the table the presents for the children; a scene of more sober joy succeeds; as on this day, after an old custom, the mother says privately to each of her daughters, and the father to his sons, that which he has observed most praiseworthy, and that which was most faulty, in their conduct. Formerly, and still in all the smaller towns and villages throughout North Germany, these presents were sent by all the parents to some one fellow, who, in high-buskings, a white robe, a mask, and an enormous flax-wig, personates *Knecht Rupert*—i. e., the servant Rupert. On Christmas-night, he goes round to every house, and says that Jesus Christ, his Master, sent him thither. The parents and elder children receive him with great pomp and reverence, while the little ones are most terribly frightened. He then inquires for the children, and, according to the character which he hears from the parents, he gives them the intended presents, as if they came out of heaven from Jesus Christ. Or, if they should have been bad children, he gives the parents a rod, and in the name of his Master recommends them to use it frequently. About seven or eight years old, the children are let into the secret, and it is curious how faithfully they keep it.'

In the state of Pennsylvania, in North America, where many of the settlers are of German descent, Christmas Eve is observed with many of the ceremonies practised in the Fatherland of the Old World. The Christmas-tree branches forth in all its splendour, and before going to sleep, the children hang up their stockings at the foot of the bed, to be filled by a personage bearing the name of *Krish-kinkle* (a corruption of *Christ-kindlein*, or the Infant Christ), who is supposed to descend the chimney with gifts for all good children. If, however, any one has been naughty, he finds a birch-rod instead of sweetmeats in the stocking. This implement of correction is believed to have been placed there by another personage, called *Pelsnichol*, or Nicholas with the fur, in allusion to the dress of skins which he is supposed to wear. In this notion, a connection is evidently to be traced with the well-known legendary attributes of St Nicholas, previously described, though the benignant character of the saint is in this instance wofully belied. It is further to be remarked, that though the general

understanding is that *Krishkinkle* and *Pelsnichol* are distinct personages—the one the rewarder of good children, the other the punisher of the bad—

they are also occasionally represented as the same individual under different characters, the prototype of which was doubtless the charitable St Nicholas.

CHRISTMAS GAMES : SNAPDRAGON.

OME interesting particulars relative to the indoor diversions of our ancestors at Christmas, occur in the following passage quoted by Brand from a tract, entitled *Round about our Coal-fire, or Christmas Entertainments*, which was published in the early part of the last century. 'The time of the year being cold and frosty, the diversions are within doors, either in exercise or by the fireside. Dancing is one of the chief exercises; or else there is a match at Blindman's Buff, or Puss in the Corner. The next game is Questions and Commands, when the commander may oblige his subjects to answer any lawful question, and make the same obey him instantly, under the penalty of being smutted [having the face blackened], or paying such forfeit as may be laid on the aggressor. Most of the other diversions are cards and dice.'

From the above we gather that the sports on Christmas evenings, a hundred and fifty years ago, were not greatly dissimilar to those in vogue at the present day. The names of almost all the pastimes then mentioned must be familiar to every reader, who has probably also participated in them himself at some period of his life. Let us only add *charades*, that favourite amusement of modern drawing-rooms (and of these only the name, not the sport itself, was unknown to our ancestors), together with a higher spirit of refinement and delicacy, and we shall discover little difference between the juvenile pastimes of a Christmas-party in the reign of Queen Victoria,

and a similar assemblage in the reign of Queen Anne or the first Georges.

One favourite Christmas sport, very generally played on Christmas Eve, has been handed down to us from time immemorial under the name of 'Snapdragon.' To our English readers this amusement is perfectly familiar, but it is almost unknown in Scotland, and it seems therefore desirable here to give a description of the pastime. A quantity of raisins are deposited in a large dish or bowl (the broader and shallower this is, the better), and brandy or some other spirit is poured over the fruit and ignited. The bystanders now endeavour, by turns, to grasp a raisin, by plunging their hands through the flames; and as this is somewhat of an arduous feat, requiring both courage and rapidity of action, a considerable amount of laughter and merriment is evoked at the expense of the unsuccessful competitors. As an appropriate accompaniment we introduce here

The Song of Snapdragon.

'Here he comes with flaming bowl,
Don't he mean to take his toll,
Snip! Snap! Dragon!
Take care you don't take too much,
Be not greedy in your clutch,
Snip! Snap! Dragon!

With his blue and lapping tongue
Many of you will be stung,
Snip! Snap! Dragon!

For he snaps at all that comes
Snatching at his feast of plums,
Snip! Snap! Dragon!

But Old Christmas makes him come,
Though he looks so fee! fa! fum!
Snip! Snap! Dragon!
Don't 'ee fear him, be but bold—
Out he goes, his flames are cold,
Snip! Snap! Dragon!

Whilst the sport of Snapdragon is going on, it is usual to extinguish all the lights in the room, so that the lurid glare from the flaming spirits may exercise to the full its weird-like effect. There seems little doubt that in this amusement we retain a trace of the fiery ordeal of the middle ages, and also of the Druidical fire-worship of a still remoter epoch. A curious reference to it occurs in the quaint old play of *Lingua*, quoted by Mr Sandys in his work on Christmas.

'Memory. Oh, I remember this dish well; it was first invented by Pluto to entertain Proserpine withal.

Phantastes. I think not so, Memory; for when Hercules had killed the flaming dragon of Hesperia, with the apples of that orchard he made this fiery meat; in memory whereof he named it Snapdragon.'

Snapdragon, to personify him, has a 'poor relation' or 'country cousin,' who bears the name of *Flapdragon*. This is a favourite amusement among the common people in the western counties of

England, and consists in placing a lighted candle in a can of ale or cider, and drinking up the contents of the vessel. This act entails, of course, considerable risk of having the face singed, and herein lies the essence of the sport, which may be averred to be a somewhat more arduous proceeding in these days of moustaches and long whiskers than it was in the time of our close-shaved grandfathers.

The Mummerys.

The mummerys, or, as they are styled in Scotland, the *guisers* or *guizards*, occupied a prominent place in the Christmas revels of the olden time, and their performances, though falling, like the other old customs of the season, into desuetude, are still kept up in several parts of the country. The passion for masquerade, like that for dramatic representation, seems an inherent one in human nature; and though social progress and fashion may modify and vary the peculiar mode of development, the tendency itself remains unaltered, and only adopts from age to age a new, and it may be, more intellectual phase. Thus the rude and irreverent mysteries and miracle plays which delighted our ancestors, have been succeeded in the gradual course of improvement by the elaborate stage mechanism and display of our own times; and the coarse drolleries which characterised the old Christmas festivities, have made way for the games and charades, and other refined amusements of modern drawing-rooms. But in all these changes we only find an expression under altered and diversified forms of certain essential feelings and tendencies in the constitution of humanity.

Looking back to the Roman *Saturnalia*, from which so many of our Christmas usages are derived, we find that the practice of masquerading was greatly in vogue at that season among the people of Rome. Men and women assumed respectively the attire of the opposite sex, and masks of all kinds were worn in abundance. The early Christians, we are informed, used, on the Feast of the Circumcision or New-year's Day, to run about in masks in ridicule of the pagan superstitions; but there can be no doubt that they also frequently shared in the frolics of their heathen neighbours, and the fathers of the church had considerable difficulty in prevailing on their members to refrain from such unedifying pastimes. Afterwards, the clergy endeavoured to metamorphose the heathen revels into amusements, which, if not really more spiritual in character than those which they supplanted, had at least the merit of bearing reference to the observances, and recognising the authority of the church and its ministers. The mysteries or miracle plays in which even the clergy occasionally took part as performers, were the results, amid numerous others, of this policy. These singular dramas continued for many centuries to form a favourite amusement of the populace, both at Christmas and other seasons of the year; and in the first volume of this work (p. 633) will be found an account of the celebration of the Whitsuntide mysteries at Chester. The Christmas *mumming* was in many respects a kindred diversion, though it appears to have partaken less of the religious element, and resembled more nearly those medieval pageants in which certain subjects and

characters, taken from pagan mythology or popular legends, were represented. Frequently, also, it assumed very much the nature of a masquerade, when the sole object of the actors is to disguise themselves, and excite alternately laughter and admiration by the splendid or ridiculous costumes in which they are arrayed.

The term *mummer* is synonymous with *masker*, and is derived from the Danish, *mumme*, or Dutch, *momme*. The custom of mumming at the present day, such as it is, prevails only at the Christmas season, the favourite and commencing night for the pastime being generally Christmas Eve. Formerly, however, it seems to have been practised also at other times throughout the year, and Stow, in his *Survey of London*, has preserved to us an account of a splendid 'mummerie,' which, in 1377, was performed shortly before Candlemas by the citizens of London, for the amusement of Prince Richard, son of the Black Prince, and afterward the unfortunate monarch Richard II. In the year 1400, we are informed that Henry IV., holding his Christmas at Eltham, was visited by twelve aldermen and their sons as mummerys, and that these august personages 'had great thanks' from his majesty for their performance. But shortly afterwards, as Fabian tells us, a conspiracy to murder the king was organised under the guise of a Twelfth-night mumming. The plot was discovered only a few hours before the time of putting it in execution. Henry VIII., who ruthlessly demolished so many ancient institutions, issued an ordinance against mumming or guising, declaring all persons who went about to great houses arrayed in this fashion, liable to be arrested as vagabonds, committed to jail for three months, and fined at the king's pleasure. The reason assigned for this edict, is the number of murders and other felonies which have arisen from this cause. But we hear of no permanent or serious check sustained by the mummerys in consequence.

In the tract, *Round about our Coal-fire, or Christmas Entertainments*, already quoted, the following passage occurs in reference to the practice of mumming at a comparatively recent period: 'Then comes mumming or masquerading, when the squire's wardrobe is ransacked for dresses of all kinds. Corks are burnt to black the faces of the fair, or make deputy-moustaches, and every one in the family, except the squire himself, must be transformed.' And in further illustration of an old English pastime, the subjoined verses on mumming, in the characteristic form of the madrigal, from *La Musa Madrigalesca*, may here be introduced:

'To shorten winter's sadness,
See where the folks with gladness
Disguised all are coming,
Right wantonly a-mumming.
Fa la.

Whilst youthful sports are lasting,
To feasting turn our fasting;
With revels and with vassails,
Make grief and care our vassals.
Fa la.

For youth it well beseemeth,
That pleasure he esteemeth;
And sullen age is hated,
That mirth would have abated.
Fa la.'

The grand and special performance of the mummers from time immemorial, has been the representation of a species of drama, which embodies the time-honoured legend of St George and the dragon, with sundry whimsical adjuncts, which contribute to give the whole affair an aspect of 'very tragical mirth.' The actors, chiefly young lads, having arrayed themselves in the costumes proper to the allegorical characters which they are to support, sally forth in company on Christmas Eve, to commence their round of visits to the houses of the

principal inhabitants of the parish. Arriving at the first residence in their way, they knock at the door, and claim the privilege of Christmas in the admission of St George and his 'merry-men.' The accompanying engraving delineates a motley group on such an occasion as we are describing. First is seen Old Father Christmas, bearing, as emblematic devices, the holly bough, wassail-bowl, &c. Beside him stands a pretty little girl, carrying a branch of mistletoe. Then come the Grand Turk, the gallant knight, St George, and the latter's antagonist, the

A PARTY OF MUMMERS.

devouring dragon. A doctor is also present with a large box of pills to cure the wounded. Drums and other music accompany the procession, which, moreover, in the above engraving is represented as accompanied by the parish-beadle, whose command of the stocks, in days gone by, rendered him a terror to evil-doers, and insured the maintenance of order and decorum.

The institution of the mummers, as already intimated, is one that has considerably declined, but it still flourishes in some of the remoter districts of England. As regards the *guisers* in Scotland, where the festivities of the winter-season cluster chiefly around the New Year, we shall have occasion to make special reference to them under the 31st of December.

In conclusion, we present our readers with a specimen of the mumming-drama, as exhibited at the present day at Tenby, in South Wales. At this town, for three weeks at the Christmas

season, the mummers are accustomed to go their rounds, mostly three in company, in a quaint guise, when every house is visited by them, and leave to enter requested. Upon being admitted, they commence the performance of the following drama, which has already been printed in *Tales and Traditions of Tenby*. As each of the three represents various characters, they shall be designated Nos. 1, 2, and 3.

No. 1.—'Here come I, Old Father Christmas,

Christmas or not,
I hope Old Father Christmas
Will never be forgot.

A room—make room here, gallant boys,
And give us room to rhyme,
We're come to shew activity
Upon a Christmas time.

Acting youth or acting age,
The like was never acted on this stage;
If you don't believe what I now say,
Enter St George, and clear the way.'

No. 2.—‘Here come I, St George, the valiant man,
With naked sword and spear in hand,
Who fought the dragon, and brought him to
the slaughter,
And for this won the king of Egypt’s daughter.
What man or mortal will dare to stand
Before me with my sword in hand;
I’ll slay him, and cut him as small as flies,
And send him to Jamaica to make mince-pies.’

St George’s challenge is soon taken up, for says
No. 3:

‘Here come I, a Turkish knight,
In Turkish land I learned to fight,
I’ll fight St George with courage bold,
And if his blood’s hot, will make it cold.’

To this rejoins No. 2, who says:

‘If thou art a Turkish knight,
Draw out thy sword, and let us fight.’

A battle is the result; the Turk falls, and St
George, struck with remorse, exclaims:

‘Ladies and gentlemen,
You’ve seen what I’ve done,
I’ve cut this Turk down
Like the evening sun;
Is there any doctor that can be found,
To cure this knight of his deadly wound?’

No. 1 re-enters, metamorphosed.

‘Here come I, a doctor,
A ten-pound doctor;
I’ve a little bottle in my pocket,
Called hokum, shokum, alicampagne;
I’ll touch his eyes, nose, mouth, and chin,
And say: “Rise, dead man,” and he’ll fight again.’

After touching the prostrate Turk, the latter leaps
up, ready again for the battle. St George, how-
ever, thinks this to be a favourable opportunity
for sounding his own praises, and rejoins:

‘Here am I, St George, with shining armour bright,
I am a famous champion, also a worthy knight;
Seven long years in a close cave was kept,
And out of that into a prison leaped,
From out of that into a rock of stones,
There I laid down my grievous bones.
Many a giant did I subdue,
And ran a fiery dragon through.
I fought the man of Tillotree,
And still will gain the victory.
First, then, I fought in France,
Second, I fought in Spain,
Thirdly, I came to Tenby,
To fight the Turk again.’

A fight ensues, and St George, being again victor,
repeats his request for a doctor, who succeeds, as
before, in performing a miraculous cure, and at
once comes forward as the Protector:

‘Here come I, Oliver Cromwell,
As you may suppose,
Many nations I have conquered,
With my copper nose.
I made the French to tremble,
And the Spanish for to quake,
I fought the jolly Dutchmen,
And made their hearts to ache.’

No. 2 then changes his character into that of the
‘gentleman in black.’

‘Here come I, Beelzebub,
Under my arm I carry a club,
Under my chin I carry a pan,
Don’t I look a nice young man?’

Having finished his speech, the main object of the
visit is thus delicately hinted by No. 3:

‘Ladies and gentlemen,
Our story is ended,
Our money-box is recommended;
Five or six shillings will not do us harm,
Silver, or copper, or gold if you can.’

After this appeal has been responded to, St George,
the Turk, Doctor, Oliver Cromwell, and Beelzebub,
take their departure, and the ‘guising’ is at an
end.

The Lord of Misrule.

The functionary with the above whimsical title
played an important part in the festivities of Christ-
mas in the olden time. His duties were to lead and
direct the multifarious revels of the season, or, as
we should say at the present day, to act as Master
of the Ceremonies. The following account of
him is given by Stow: ‘In the feast of Christmas,
there was in the king’s house, wheresoever he
lodged, a *Lord of Misrule*, or Master of Merry
Disports, and the like had ye in the house of
every nobleman of honour or good worship, were
he spiritual or temporal. The Mayor of London,
and either of the Sheriffs, had their several *Lords
of Misrule*, ever contending, without quarrel or
offence, who should make the rarest pastime to
delight the beholders. These lords beginning their
rule at Allhallond Eve, continued the same till the
morrow after the Feast of the Purification, com-
monly called Candlemas Day, in which space there
were fine and subtle disguisings, masks and mum-
meries, with playing at cards for counters, nayles
and points, in every house, more for pastimes than
for game.’

In the university of Cambridge, the functions of
the Lord of Misrule were performed by one of the
Masters of Arts, who was regularly elected to super-
intend the annual representation of Latin plays by
the students, besides taking a general charge of
their games and diversions during the Christmas
season, and was styled the *Imperator* or *Præfectus
Ludorum*. A similar Master of Revels was chosen
at Oxford. But it seems to have been in the Inns
of Court in London that the Lord of Misrule reigned
with the greatest splendour, being surrounded with
all the parade and ceremony of royalty, having his
lord-keeper and treasurer, his guard of honour, and
even his two chaplains, who preached before him on
Sunday in the Temple Church. On Twelfth Day,
he abdicated his sovereignty, and we are informed
that in the year 1635, this mock-representative of
royalty expended in the exercise of his office about
two thousand pounds from his own purse, and at the
conclusion of his reign was knighted by Charles I.
at Whitehall. The office, indeed, seems to have
been regarded among the Templars as a highly-
honourable one, and to have been generally con-
ferred on young gentlemen of good family.

The following is an extract from the ‘articles’
drawn up by the Right Worshipful Richard Evelyn,
Esq., father of the author of the *Diary*, and deputy-
lieutenant of the counties of Surrey and Sussex, for
appointing and defining the functions of a Christ-
mas Lord of Misrule over his estate at Wotton:—
‘*Imprimis*, I give free leave to Owen Flood, my
trumpeter, gentleman, to be Lord of Misrule of all
good orders during the twelve days. And also, I

give free leave to the said Owen Flood to command all and every person or persons whatsoever, as well servants as others, to be at his command whensoever he shall sound his trumpet or music, and to do him good service, as though I were present myself, at their perils. . . . I give full power and authority to his lordship to break up all locks, bolts, bars, doors, and latches, and to fling up all doors out of hinges, to come at those who presume to disobey his lordship's commands. God save the king!

In the accompanying engraving, one of these Lords of Misrule is shewn with a fool's bauble as his badge of office, and a page, who acts as his assistant or confederate in conducting the jocularities. We are informed that a favourite mode for

THE LORD OF MISRULE.

his lordship to enter on the duties of his office was by explaining to the company that he absolved them of all their wisdom, and that they were to be just wise enough to make fools of themselves. No one was to sit apart in pride or self-sufficiency, to laugh at others. Moreover, he (the Lord of Misrule) came endowed with a magic power to turn all his auditory into children, and that, while his sovereignty lasted, he should take care that they conducted themselves as such. So fealty was sworn to the 'merry monarch,' and the reign of fun and folly forthwith commenced. In the pantomime of the present day, we see in the mischievous pranks of the Clown, who parodies all the ordinary occupations of grave and serious life, a reproduction under a modern form of the extravagances of the Lord of Misrule.

There can be no doubt that scandalous abuses often resulted from the exuberant licence assumed by the Lord of Misrule and his satellites. It need, therefore, occasion no surprise to find their proceedings denounced in no measured terms by

Prynne and other zealous Puritans. 'If,' says the author of the *Histrion-Mastix*, 'we compare our Bacchanalian Christmasses and New-year's Tides with these Saturnalia and Feasts of Janus, we shall find such near affinity between them both in regard of time (they being both in the end of December and on the first of January) and in their manner of solemnising (both of them being spent in revelling, epicurisme, wantonnesse, idleness, dancing, drinking, stage-plays, masques, and carnall pompe and jollity), that we must needs conclude the one to be but the very ape or issue of the other. Hence Polydore Virgil affirms in express termes that our Christmas Lords of Misrule (which custom, saith he, is chiefly observed in England), together with dancing, masques, mummeries, stage-plays, and such other Christmass disorders now in use with Christians, were derived from these Roman Saturnalia and Bacchanalian festivals; which (concludes he) should cause all pious Christians eternally to abominate them.'

In Scotland, previous to the Reformation, the monasteries used to elect a functionary of a similar character, for the superintendence of the Christmas revels, under the designation of the Abbot of Unreason. The readers of the Waverley Novels will recollect the graphic delineation of one of these mock-ecclesiastics in *The Abbot*. An ordinance for suppressing this annual burlesque, with other festivities of a like kind, was passed by the Scottish legislature in 1555. In France, we find the congener of the Lord of Misrule and the Abbot of Unreason in the *Abbas Stultorum*—the Abbot or Pope of Fools.

Born.—Galba, Roman emperor, 3 B.C.; John, king of England, 1166, *Oxford*; 361 A.D.; Thomas Beaufort, Duke of Exeter, 1426, *Bury St Edmunds*; Vasco de Gama, celebrated Portuguese navigator, 1525, *Cochin*, in *Malabar*; Madame de Genlis, popular authoress, 1830, *Paris*; Davies Gilbert, antiquarian and man of science, 1839, *Eastbourne, Sussex*; Archdeacon Henry John Todd, editor of Johnson's *Dictionary*, &c., 1845, *Settrington, Yorkshire*; Dr John Ayrton Paris, chemist, 1856, *London*; Hugh Miller, geologist, 1856, *Portobello*.

Died.—George of Cappadocia, noted Arian bishop, slain at Alexandria, 361 A.D.; Thomas Beaufort, Duke of Exeter, 1426, *Bury St Edmunds*; Vasco de Gama, celebrated Portuguese navigator, 1525, *Cochin*, in *Malabar*; Madame de Genlis, popular authoress, 1830, *Paris*; Davies Gilbert, antiquarian and man of science, 1839, *Eastbourne, Sussex*; Archdeacon Henry John Todd, editor of Johnson's *Dictionary*, &c., 1845, *Settrington, Yorkshire*; Dr John Ayrton Paris, chemist, 1856, *London*; Hugh Miller, geologist, 1856, *Portobello*.

The Waits.

It is a curious circumstance, that no one appears clearly to know whether the term *Waits* denoted originally musical instruments, a particular kind of music, or the persons who played under certain special circumstances. There is evidence in support of all these views. At one time, the name of Waits was given to minstrels attached to the king's court, whose duty it was to guard the streets at night, and proclaim the hour—something in the same manner as the watchmen were wont to do in London before the establishment of the metropolitan police. A regular company of waits was established at Exeter as early as the year 1400, and in relation to the duties and emoluments of such personages in the reign of Edward IV., the following curious account is furnished by Rymer: 'A wayte, that nightelye from Mychelmas to Shreve Thorsdaye pipethe the watche withen this courte fower tymes;

in the somere nyghtes iij tymes, and makethe bon gayte at every chambere-dore and offyce, as well for feare of pyckeres and pillers. He eateth in the halle with mynstrielles, and takethe lyverye [allowance] at nyghte a loffe, a galone of alle, and for somere ryghtes ij candles pich, a bushel of coles; and for wintere nyghtes half a loafe of bread, a galone of alle, iiij candles piche, a bushel of coles; daylye whilste he is presente in courte for his wages in cheque roale allowed iiijd. ob. or else iijd. by the discreshon of the steuarde and tressorer, and that, after his cominge and diserving; also cloathing with the household yeomen or mynstrielles lyke to the wages that he takethe; and if he be syke he takethe twoe loves, ij messe of great meate, one gallon of alle. Also he parteth with the household of general gyfts, and hathe his beddinge carried by the comptrollers assygment; and under this yeoman to be a groome watere. Yf he can excuse the yeoman in his absense, then he takethe rewarde, clotheinge, meat, and all other things lyke to other grooms of houshold. Also this yeoman waight, at the makinge of Knyghtes of the Bath, for his attendance upon them by nyghte-time, in watchinge in the chappelle, hath he to his fee all the watchinge clothing that the knyght shall wear upon him.' This statement is interesting, as it shews that the *Wait*, or *Yeoman-wait*, at court was a kind of page, paid partly in money and partly in board-wages; and it may be a fair question whether the *yeoman-waiter* of later days is not to be traced to some such origin.

In Mr Thoms's edition of *The famous History of Dr Faustus*, the term under notice is clearly applied to a musical instrument: 'Lastly was heard by Faustus all manner of instruments of music—as organs, clarigolds, lutes, viols, citterns, *waits*, horn-pipes, anomes, harps, and all manner of other instruments of music.' Butler, also, in his *Principles of Musick*, published in 1636, mentions 'the *waits* or *hoboyes*'—implying that that which was called the *waits* or *wayghtes*, was the same instrument as the one long known as the hoboy, hautboy, hautbois, or oboe. Some trace the name *wait* to the German *wacht*, which signifies a watchman or night-guard; a meaning not necessarily connected with music in any way. Dr Rimbault states that, in a roll of officers in the service of Henry VII., one of the entries is 'Musicians for the Wayghtes.'

Dr Busby, in his *Musical Dictionary*, speaking of the *waits*, says: 'This noun formerly signified *hautboys*, and (which is remarkable) has no singular number. From the instruments, its signification was, after a time, transferred to the performers themselves; who, being in the habit of parading the streets at night with their music, occasioned the name to be applied generally to all musicians who followed a similar practice.'

In the following extract from a communication to the *Gentleman's Magazine* in 1756, describing the mode of constituting freemen at Alnwick, the *waits* are distinctly spoken of as persons. After describing certain ridiculous ceremonies, the writer proceeds to say: 'They [the freemen in prospect] are generally met by women dressed up with ribbons, bells, and garlands of gum-flowers, who welcome them with dancing and singing, and are called *timber-waits*—perhaps a corruption of *timbrel-waits*, players on timbrels.' Mr H. Coleridge also has expressed a belief that the original *waits* were

wind-instrument players, as shewn by the use of the word in the romances of *Kyng Alysaunder* and *Sir Eglamour*.

A writer in *Notes and Queries* draws attention to the analogy between the words *waits* and *waith*, the latter of which, in Scotland, means wandering or roaming about from place to place. Such wanderers were the minstrels of Scotland, who, three centuries ago, were under the patronage of the civic corporation of Glasgow, and at the city's expense were clothed in blue coats or outer garments. 'A remnant of this custom, still popularly called *waits*, yet exists in the magistrates annually granting a kind of certificate or diploma to a few musicians, generally blind men of respectable character, who perambulate the streets of the city during the night and morning, for about three weeks or a month previous to New-year's Day, in most cases performing on violins the slow, soothing airs peculiar to a portion of the old Scottish melodies; and in the solemn silence of repose the effect is very fine. At the commencement of the New-year, these men call at the houses of the inhabitants, and, presenting their credentials, receive a small subscription.'

It is evident that considerable confusion prevails on the subject of the *waits*, but if we abide by the modern meaning of the term, we shall find that it refers exclusively to a company of musicians whose performances bear a special relation to the season of Christmas. In Scotland, perhaps, they are more associated with the New Year, but in England their functions belong certainly to a period which ends with Christmas-day.

When the *waits* became town-musicians, instead of court-pages, they were sometimes civic servants, employed as watchmen to call the hour at night, sometimes serenaders or nocturnal minstrels, who looked for a living from private liberality. There is a paper in the *Tatler* (No. 222), which speaks of *waits* as they were a century and a half ago, and introduces the subject in the following manner: 'Whereas, by letters from Nottingham, we have advice that the young ladies of that place complain for want of sleep, by reason of certain riotous lovers, who for this last summer have very much infested the streets of that eminent city with violins and bass-violis, between the hours of twelve and four in the morning;' with more to the same purport. It then proceeds to state that the same practice existed in other towns, and accounts for it thus: 'For as the custom prevails at present, there is scarce a young man of any fashion in a corporation who does not make love with the town music; the *waits* often help him through his courtship.'

At present, and in London, the *waits* are musicians who play during the night-hours for two or three weeks before Christmas, terminating their performances usually on Christmas Eve. They use generally wind-instruments, and play any tunes which happen to be popular at the time. They call at the houses of the inhabitants soon afterwards for Christmas donations.

Down to the year 1820, perhaps later, the *waits* had a certain degree of official recognition in the cities of London and Westminster. In London, the post was purchased; in Westminster, it was an appointment under the control of the High Constable and the Court of Burgesses. A police

inquiry about Christmas-time, in that year, brought the matter in a singular way under public notice. Mr Clay had been the official leader of the waits for Westminster; and on his death, Mr Monro obtained the post. Having employed a number of persons in different parts of the city and liberties of Westminster to serenade the inhabitants, trusting to their liberality at Christmas as a remuneration, he was surprised to find that other persons were, unauthorised, assuming the right of playing at night, and making applications to the inhabitants for Christmas-boxes. Sir R. Baker, the police magistrate, promised to aid Mr Monro in the assertion of his claims; and the result, in several police cases, shewed that there really was this 'vested right' to charm the ears of the citizens of Westminster with nocturnal music. At present (as stated in the last paragraph), there is nothing to prevent any number of such itinerant minstrels from plying their midnight calling.

DECEMBER 25.

The Nativity of Jesus Christ. St Eugenia, virgin and martyr, about 257. St Anastasia, martyr, 304. Another St Anastasia.

Christmas-Day.

The festival of Christmas is regarded as the greatest celebration throughout the ecclesiastical year, and so important and joyous a solemnity is it deemed, that a special exception is made in its favour, whereby, in the event of the anniversary falling on a Friday, that day of the week, under all other circumstances a fast, is transformed to a festival.

That the birth of Jesus Christ, the deliverer of the human race, and the mysterious link connecting the transcendent and incomprehensible attributes of Deity with human sympathies and affections, should be considered as the most glorious event that ever happened, and the most worthy of being reverently and joyously commemorated, is a proposition which must commend itself to the heart and reason of every one of His followers, who aspires to walk in His footsteps, and share in the ineffable benefits which His death has secured to mankind. And so though at one period denounced by the Puritans as superstitious, and to the present day disregarded by Calvinistic Protestants, as unwarranted by Scripture, there are few who will seriously dispute the propriety of observing the anniversary of Christ's birth by a religious service.

A question, however, which has been long and eagerly agitated, is here brought forward. Is the 25th of December really the day on which our Saviour first shewed himself in human form in the manger at Bethlehem? The evidence which we possess regarding the date is not only traditional, but likewise conflicting and confused. In the earliest periods at which we have any record of the observance of Christmas, we find that some communities of Christians celebrated the festival on the 1st or 6th of January; others on the 29th of March, the time of the Jewish Passover; while others, it is said, observed it on the 29th of September, or Feast of Tabernacles. There can be no

doubt, however, that long before the reign of Constantine, in the fourth century, the season of the New Year had been adopted as the period for celebrating the Nativity, though a difference in this respect existed in the practice of the Eastern and Western Churches, the former observing the 6th of January, and the latter the 25th of December. The custom of the Western Church at last prevailed, and both of the ecclesiastical bodies agreed to hold the anniversary on the same day. The fixing of the date appears to have been the act of Julius I., who presided as pope or bishop of Rome, from 337 to 352 A.D. The circumstance is doubted by Mosheim, but is confirmed by St Chrysostom, who died in the beginning of the fifth century. This celebrated father of the church informs us, in one of his epistles, that Julius, on the solicitation of St Cyril of Jerusalem, caused strict inquiries to be made on the subject, and thereafter, following what seemed to be the best authenticated tradition, settled authoritatively the 25th of December as the anniversary of Christ's birth, the '*Festorum omnium metropolis*,' as it is styled by Chrysostom. It is true, indeed, that some have represented this fixing of the day to have been accomplished by St Telesphorus, who was bishop of Rome 128-139 A.D., but the authority for the assertion is very doubtful. Towards the close of the second century, we find a notice of the observance of Christmas in the reign of the Emperor Commodus; and about a hundred years afterwards, in the time of Dioclesian, an atrocious act of cruelty is recorded of the last-named emperor, who caused a church in Nicomedia, where the Christians were celebrating the Nativity, to be set on fire, and by barring every means of egress from the building, made all the worshippers perish in the flames. Since the end of the fourth century at least, the 25th of December has been uniformly observed as the anniversary of the Nativity by all the nations of Christendom.

Thus far for ancient usage, but it will be readily comprehended that insurmountable difficulties yet exist with respect to the real date of the momentous event under notice. Sir Isaac Newton, indeed, remarks in his *Commentary on the Prophecies of Daniel*, that the feast of the Nativity, and most of the other ecclesiastical anniversaries, were originally fixed at cardinal points of the year, without any reference to the dates of the incidents which they commemorated, dates which, by the lapse of time, had become impossible to be ascertained. Thus the Annunciation of the Virgin Mary was placed on the 25th of March, or about the time of the vernal equinox; the feast of St Michael on the 29th of September, or near the autumnal equinox; and the birth of Christ and other festivals at the time of the winter-solstice. Many of the apostles' days—such as St Paul, St Matthias, and others—were determined by the days when the sun entered the respective signs of the ecliptic, and the pagan festivals had also a considerable share in the adjustment of the Christian year. To this last we shall shortly have occasion to advert more particularly, but at present we shall content ourselves by remarking that the views of the great astronomer just indicated, present at least a specious explanation of the original construction of the ecclesiastical calendar. As regards the observance of Easter indeed, and its accessory celebrations, there is good ground for maintaining that they mark tolerably accurately

the anniversaries of the Passion and Resurrection of our Lord, seeing that we know that the events themselves took place at the period of the Jewish Passover. But no such precision of date can be adduced as regards Christmas, respecting which the generally received view now is, that it does not correspond with the actual date of the nativity of our Saviour. One objection, in particular, has been made, that the incident recorded in Scripture, of shepherds keeping watch by night on the plains of Bethlehem, could not have taken place in the month of December, a period generally of great inclemency in the region of Judea.

Though Christian nations have thus, from an early period in the history of the church, celebrated Christmas about the period of the winter-solstice or the shortest day, it is well known that many, and, indeed, the greater number of the popular festive observances by which it is characterised, are referrible to a much more ancient origin. Amid all the pagan nations of antiquity, there seems to have been a universal tendency to worship the sun as the giver of life and light, and the visible manifestation of the Deity. Various as were the names bestowed by different peoples on this object of their worship, he was still the same divinity. Thus, at Rome, he appears to have been worshipped under one of the characters attributed to *Saturn*, the father of the gods; among the Scandinavian nations he was known under the epithet of *Odin* or *Woden*, the father of *Thor*, who seems afterwards to have shared with his parent the adoration bestowed on the latter, as the divinity of which the sun was the visible manifestation; whilst with the ancient Persians, the appellation for the god of light was *Mithras*, apparently the same as the Irish *Mithr*, and with the Phœnicians or Carthaginians it was *Baal* or *Bel*, an epithet familiar to all students of the Bible.

Concurring thus as regards the object of worship, there was a no less remarkable uniformity in the period of the year at which these different nations celebrated a grand festival in his honour. The time chosen appears to have been universally the season of the New Year, or, rather, the winter-solstice, from which the new year was frequently reckoned. This unanimity in the celebration of the festival in question, is to be ascribed to the general feeling of joy which all of us experience when the gradual shortening of the day reaches its utmost limit on the 21st of December, and the sun, recommencing his upward course, announces that mid-winter is past, and spring and summer are approaching. On similar grounds, and with similar demonstrations, the ancient pagan nations observed a festival at mid-summer, or the summer-solstice, when the sun arrives at the culminating-point of his ascent on the 21st of June, or longest day.

By the Romans, this anniversary was celebrated under the title of *Saturnalia*, or the festival of *Saturn*, and was marked by the prevalence of a universal licence and merry-making. The slaves were permitted to enjoy for a time a thorough freedom in speech and behaviour, and it is even said that their masters waited on them as servants. Every one feasted and rejoiced, work and business were for a season entirely suspended, the houses were decked with laurels and evergreens, presents were made by parents and friends, and all sorts of

games and amusements were indulged in by the citizens. In the bleak north, the same rejoicings had place, but in a ruder and more barbarous form. Fires were extensively kindled, both in and out of doors, blocks of wood blazed in honour of *Odin* and *Thor*, the sacred mistletoe was gathered by the Druids, and sacrifices, both of men and cattle, were made to the savage divinities. Fires are said, also, to have been kindled at this period of the year by the ancient Persians, between whom and the Druids of Western Europe a relationship is supposed to have existed.

In the early ages of Christianity, its ministers frequently experienced the utmost difficulty in inducing the converts to refrain from indulging in the popular amusements which were so largely participated in by their pagan countrymen. Among others, the revelry and licence which characterised the *Saturnalia* called for special animadversion. But at last, convinced partly of the inefficacy of such denunciations, and partly influenced by the idea that the spread of Christianity might thereby be advanced, the church endeavoured to amalgamate, as it were, the old and new religions, and sought, by transferring the heathen ceremonies to the solemnities of the Christian festivals, to make them subservient to the cause of religion and piety. A compromise was thus effected between clergy and laity, though it must be admitted that it proved anything but a harmonious one, as we find a constant, though ineffectual, proscription by the ecclesiastical authorities of the favourite amusements of the people, including among others the sports and revelries at Christmas.

Ingrafted thus on the Roman *Saturnalia*, the Christmas festivities received in Britain further changes and modifications, by having superadded to them, first, the Druidical rites and superstitions, and then, after the arrival of the Saxons, the various ceremonies practised by the ancient Germans and Scandinavians. The result has been the strange medley of Christian and pagan rites which contribute to make up the festivities of the modern Christmas. Of these, the burning of the Yule log, and the superstitions connected with the mistletoe have already been described under Christmas Eve, and further accounts are given under separate heads, both under the 24th and 25th of December.

The name given by the ancient Goths and Saxons to the festival of the winter-solstice was *Jul* or *Yule*, the latter term forming, to the present day, the designation in the Scottish dialect of Christmas, and preserved also in the phrase of the 'Yule log.' Perhaps the etymology of no term has excited greater discussion among antiquaries. Some maintain it to be derived from the Greek, *οὔλοι* or *οὐλος*, the name of a hymn in honour of *Ceres*; others say it comes from the Latin *jubilum*, signifying a time of rejoicing, or from its being a festival in honour of *Julius Cesar*; whilst some also explain its meaning as synonymous with *ol* or *oel*, which in the ancient Gothic language denotes a feast, and also the favourite liquor used on such occasion, whence our word *ale*. But a much more probable derivation of the term in question is from the Gothic *giul* or *hiul*, the origin of the modern word *wheel*, and bearing the same signification. According to this very probable explanation, the Yule festival received its name from its

being the turning-point of the year, or the period at which the fiery orb of day made a revolution in his annual circuit, and entered on his northern journey. A confirmation of this view is afforded by the circumstance that in the old clog almanacs, a *wheel* is the device employed for marking the season of Yule-tide.

Throughout the middle ages, and down to the period of the Reformation, the festival of Christmas, ingrafted on the pagan rites of Yule, continued throughout Christendom to be universally celebrated with every mark of rejoicing. On the adoption of a new system of faith by most of the northern nations of Europe in the sixteenth century, the Lutheran and Anglican churches retained the celebration of Christmas and other festivals, which Calvinists rejected absolutely, denouncing the observance of all such days, except Sunday, as superstitious and unscriptural. In reference to the superstition anciently prevalent in Scotland against spinning on Christmas or Yule day, and the determination of the Calvinistic clergy to put down all such notions, the following amusing passage is quoted by Dr Jamieson from *Thone Hamilton's Facile Traicteise*: 'The ministers of Scotland—in contempt of the vther halie dayes obseruit be England—cause their wyfis and seruants *spin* in oppin sicht of the people upon Yeul day; and their affectionate auditeurs constrains their tennants to yok their pleuchs on Yeul day in contempt of Christ's Natiuitie, whilk our Lord has not left vnpunisit; for their oxin ran wod [mad], and brak their nekis, and leamit [lamed] sum pleugh men, as is notoriously knawin in sindrie partes of Scotland.' In consequence of the Presbyterian form of church-government, as constituted by John Knox and his coadjutors on the model of the ecclesiastical polity of Calvin, having taken such firm root in Scotland, the festival of Christmas, with other commemorative celebrations retained from the Romish calendar by the Anglicans and Lutherans, is comparatively unknown in that country, at least in the Lowlands. The tendency to mirth and jollity at the close of the year, which seems almost inherent in human nature, has, in North Britain, been, for the most part, transferred from Christmas and Christmas Eve to New-year's Day and the preceding evening, known by the appellation of *Hogmenay*. In many parts of the Highlands of Scotland, however, and also in the county of Forfar, and one or two other districts, the day for the great annual merry-making is Christmas.

From a curious old song preserved in the Harleian Manuscripts in the British Museum, we learn that it was considered peculiarly lucky when Christmas-day fell on a Sunday, and the reverse when it occurred on a Saturday. The intermediate days are, for the most part, characterised by a happy uniformity of propitious augury. The versification is of the rudest and most rugged description, but as an interesting specimen of medieval folk-lore, we subjoin the stanzas relating to Sunday and Saturday:

'Lordinges, I warne you al beforne,
Yef that day that Cryste was borne,
Falle uppon a Sunday;
That wynter shall be good par fay,
But grete wyndes alofte shalbe,
The somer shall be fayre and drye;

By kynde skylle, wythowtyn lesse,
Throw all londes shalbe peas,
And good tyme all thyngs to don,
But he that stelyth he shalbe fownde sone;
Whate chylde that day borne be,
A great lord he shalbe.
* * * * *

If Crystmas on the Saturday falle,
That wynter ys to be dredden alle,
Hyt shalbe so fulle of grete tempeste
That hyt shall sle bothe man and beste,
Frute and corne shal fayle grete won,
And olde folke dyen many on;
Whate woman that day of chylde travayle
They shalbe borne in grete perelle;
And chyldren that be borne that day,
Within half a yere they shall dye par fay,
The summer then shall wete ryghte ylle:
If thou awght stele, hyt shel the spylle;
Thou dyest, yf sekenes take the.'

Somewhat akin to the notions above inculcated, is the belief in Devonshire that if the sun shines bright at noon on Christmas-day, a plentiful crop of apples may be expected in the following year.

From the Diary of that rare old gossip, Mr Pepys, we extract the following entries relative to three Christmas-days of two hundred years ago:

'Christmas-day (1662).—Had a pleasant walk to Whitehall, where I intended to have received the communion with the family, but I came a little too late. So I walked up into the house, and spent my time looking over pictures, particularly the ships in King Henry the Eighth's Voyage to Bullaen; marking the great difference between those built then and now. By and by, down to the chapel again, where Bishop Morley preached on the song of the angels, "Glory to God on high, on earth peace and good-will towards men." Methought he made but a poor sermon, but long, and reprehending the common jollity of the court for the true joy that shall and ought to be on those days. Particularised concerning their excess in plays and gaming, saying that he whose office it is to keep the gamesters in order and within bounds, serves but for a second rather in a duel, meaning the groome porter. Upon which it was worth observing how far they are come from taking the reprehensions of a bishop seriously, that they all laugh in the chapel when he reflected on their ill actions and courses. He did much press us to joy in these public days of joy, and to hospitality. *But one that stood by whispered in my eare, that the bishop do not spend one groate to the poor himself.* The sermon done, a good anthem followed with vials, and the king came down to receive the sacrament.

'Christmas-day (1665).—To church in the morning, and there saw a wedding in the church, which I have not seen many a day; and the young people so merry one with another, and strange to see what delight we married people have to see these poor fools decoyed into our condition, every man and woman gazing and smiling at them.

'Christmas-day (1668).—To dinner alone with my wife, who, poor wretch! sat undressed all day till ten at night, altering and lacing of a noble petticoat; while I by her making the boy read to me the Life of Julius Cæsar, and Des Cartes's book of Music.'

The geniality and joyousness of the Christmas season in England, has long been a national characteristic. The following poem or carol, by George

Wither, who belongs to the first-half of the seventeenth century, describes with hilarious animation the mode of keeping Christmas in the poet's day :

'So now is come our joyfult feast;

Let every man be jolly;
Each room with ivy leaves is drest,
And every post with holly.

Though some churls at our mirth repine,
Round your foreheads garlands twine;
Drown sorrow in a cup of wine,
And let us all be merry.

Now all our neighbours' chimneys smoke,
And Christmas blocks are burning;
Their ovens they with baked meat choke,
And all their spits are turning.
Without the door let sorrow lye;
And if for cold it hap to die,
We'll bury 't in a Christmas-pie,
And evermore be merry.

Now every lad is wond'rous trim,
And no man minds his labour;
Our lasses have provided them
A bagpipe and a tabor;
Young men and maids, and girls and boys,
Give life to one another's joys;
And you anon shall by their noise
Perceive that they are merry.

Rank misers now do sparing shun;
Their hall of music soundeth;
And dogs thence with whole shoulders run,
So all things then aboundeth.
The country-folks, themselves advance,
With crowdy-muttons out of France;
And Jack shall pipe and Jyll shall dance,
And all the town be merry.

Ned Squash hath fetcht his hands from pawn,
And all his best apparel;
Brisk Nell hath bought a ruff of lawn
With dropping of the barrel.
And those that hardly all the year
Had bread to eat, or rags to wear,
Will have both clothes and dainty fare,
And all the day be merry.

Now poor men to the justices
With capons make their errants;
And if they hap to fail of these,
They plague them with their warrants:
But now they feed them with good cheer,
And what they want, they take in beer,
For Christmas comes but once a year,
And then they shall be merry.

Good farmers in the country nurse
The poor, that else were undone;
Some landlords spend their money worse,
On lust and pride at London.
There the roysters they do play,
Drab and dice their lands away,
Which may be ours another day,
And therefore let's be merry.

The client now his suit forbears,
The prisoner's heart is eased;
The debtor drinks away his cares,
And for the time is pleased.
Though others' purses be more fat,
Why should we pine or grieve at that?
Hang sorrow! care will kill a cat,
And therefore let's be merry.

Hark! now the wags abroad do call,
Each other forth to rambling;
Anon you'll see them in the hall,
For nuts and apples scrambling.
Hark! how the roofs with laughter sound,
Anon they'll think the house goes round,
For they the cellar's depth have found,
And there they will be merry.

The wenches with their wassel-bowls
About the streets are singing;
The boys are come to catch the owls,
The wild mare in it bringing.
Our kitchen-boy hath broke his box,
And to the dealing of the ox,
Our honest neighbours come by flocks,
And here they will be merry.

Now kings and queens poor sheepecotes have,
And mate with every body;
The honest now may play the knave,
And wise men play the noddy.
Some youths will now a mumming go,
Some others play at Rowland-bo,
And twenty other game boys mo,
Because they will be merry.

Then, wherefore in these merry daies,
Should we, I pray, be duller?
No, let us sing some roundelays,
To make our mirth the fuller.
And, while thus inspired we sing,
Let all the streets with echoes ring;
Woods and hills and every thing,
Bear witness we are merry.

At present, Christmas-day, if somewhat shorn of its ancient glories, and unmarked by that boisterous jollity and exuberance of animal spirits which distinguished it in the time of our ancestors, is, nevertheless, still the holiday in which of all others throughout the year, all classes of English society most generally participate. Partaking of a religious character, the forenoon of the day is usually passed in church, and in the evening the re-united members of the family assemble round the joyous Christmas-board. Separated as many of these are during the rest of the year, they all make an effort to meet together round the Christmas-hearth. The hallowed feelings of domestic love and attachment, the pleasing remembrance of the past, and the joyous anticipation of the future, all cluster round these family-gatherings, and in the sacred associations with which they are intertwined, and the active deeds of kindness and benevolence which they tend to call forth, a realisation may almost be found of the angelic message to the shepherds of Bethlehem—'Glory to God in the highest, and on earth peace, good-will toward men.'

Christmas Carols.

Amid so many popular customs at Christmas, full of so much sweet and simple poetry, there is perhaps none more charming than that of the Christmas carols, which celebrate in joyous and yet devout strains the Nativity of the Saviour. The term is believed to be derived from the Latin *cantare* (to sing), and *rola!* an interjection expressive of joy. The practice appears to be as ancient as the celebration of Christmas itself, and we are informed that in the early ages of the church, the bishops were accustomed to sing carols on Christmas-day among

their clergy. The quaint and inestimable Jeremy Taylor, referring in his *Great Exemplar* to the *Gloria in Excelsis*, or hymn sung by the angels on the plains of Bethlehem, says: 'As soon as these blessed choristers had sung their *Christmas Carol*, and taught the Church a hymn to put into her offices for ever in the anniversary of this festivity, the angels returned into heaven.' Milton also, in the twelfth book of *Paradise Lost*, thus alludes to what may be regarded as the first Christmas carol:

'His place of birth a solemn angel tells
To simple shepherds, keeping watch by night;
They gladly thither haste, and by a quire
Of squadron'd angels hear his *carol* sung.'

In process of time, these Christmas hymns became

very much secularised, and latterly, were frequently nothing more than festal chants, sung during the revelries of the Christmas season. The earliest specimen which we possess of the medieval carol, belongs to this class, and is preserved in a manuscript in the British Museum. It is composed in Norman-French, and belongs to the thirteenth century. The same convivial quality characterises a 'sett of carols,' the earliest printed edition of these Christmas chants, published by Wynkyn de Worde in 1521. The 'Boar's Head' song, quoted in a subsequent article, occurs with others of a similar class in the collection referred to.

As with the generality of our popular ballads, we find the earlier specimens of Christmas carols often extremely rugged and unadorned in point of

CHILDREN'S CAROL ON CHRISTMAS MORNING.

composition, and perceive them gradually assume a more polished and harmonious form with the progress of education and refinement. This improvement is chiefly to be remarked after the commencement of the sixteenth century. The following carol, belonging to that period, is frequently sung on Christmas-morning by children, as represented in the accompanying engraving—

'When Christ was born of Mary free,
In Bethlem, in that fair citie,
Angels sang there with mirth and glee,
In Excelsis Gloria.

Herdsmen beheld these angels bright,
To them appearing with great light,
Who said: "God's Son is born this night,"
In Excelsis Gloria.

This King is come to save mankind,
As in scripture truths we find,
Therefore this song have we in mind,
In Excelsis Gloria.

Then, Lord, for Thy great grace,
Grant us the bliss to see thy face,
Where we may sing to Thy solace,
In Excelsis Gloria.'

In his *History of English Poetry*, Warton notices a licence, granted in 1562, to John Tysdale for printing 'Certayne goodly Carowles to be songe to the glory of God;' and again 'Crestenmas Carowles auctorissed by my lord of London.' This may be regarded as a specimen of the endeavours made at the time of the Reformation, to supplant the old popular carols, by compositions of a more devout and less popish character, and in Scotland we find instances of the same policy in the famous *Gude and Godly Ballates*, and *Ane compendious Book of godly and spirituall Sangs*; the latter printed at Edinburgh in 1621. The Puritans, indeed, denounced not only the singing of Christmas carols, but the observance of the festival of Christmas itself, as pernicious and unscriptural, and to their influence has been ascribed much of the seriousness characterising this department of popular poetry in later times.

It will be recollected that Goldsmith's *Vicar of Wakefield*, describing the unsophisticated character of his parishioners, says: 'They kept up the Christmas carol.' Such a composition as the following might have been sung by these simple swains. It is one of the most popular of the class of chants under notice.

'God rest you merry, gentlemen,
Let nothing you dismay,
For Jesus Christ our Saviour
Was born upon this day,
To save us all from Satan's power,
When we were gone astray.
O tidings of comfort and joy!
For Jesus Christ our Saviour
Was born on Christmas-day.

In Bethlehem, in Jewry,
This blessed babe was born,
And laid within a manger
Upon this blessed morn;
The which his mother Mary
Nothing did take in scorn.
O tidings, &c.

From God our Heavenly Father,
A blessed angel came,
And unto certain shepherds,
Brought tidings of the same,
How that in Bethlehem was born,
The Son of God by name.
O tidings, &c.

Fear not, then said the angel,
Let nothing you affright,
This day is born a Saviour
Of virtue, power, and might;
So frequently to vanquish all,
The friends of Satan quite.
O tidings, &c.

The shepherds at those tidings,
Rejoiced much in mind,
And left their flocks a-feeding
In tempest, storm, and wind,
And went to Bethlehem straightway,
This blessed babe to find.
O tidings, &c.

But when to Bethlehem they came,
Whereas this infant lay,
They found Him in a manger,
Where oxen feed on hay,
His mother Mary kneeling,
Unto the Lord did pray.
O tidings, &c.

Now to the Lord sing praises,
All you within this place,
And with true love and brotherhood,
Each other now embrace;
This holy tide of Christmas
All others doth deface.
O tidings, &c.'

Another of these carols is presented to the reader. Without laying claim to literary merit of an exalted order, it has all that simplicity and melodiousness which render ballad-poetry so charming:

'I saw three ships come sailing in
On Christmas-day, on Christmas-day;
I saw three ships come sailing in
On Christmas-day in the morning.

And what was in those ships all three,
On Christmas-day, on Christmas-day?
And what was in those ships all three,
On Christmas-day in the morning?

Our Saviour Christ and his Lady,
On Christmas-day, on Christmas-day;
Our Saviour Christ and his Lady,
On Christmas-day in the morning.

Pray whither sailed those ships all three,
On Christmas-day, on Christmas-day?
Pray whither sailed those ships all three,
On Christmas-day in the morning?

O they sailed into Bethlehem,
On Christmas-day, on Christmas-day;
O they sailed into Bethlehem,
On Christmas-day in the morning.

And all the bells on earth shall ring,
On Christmas-day, on Christmas-day;
And all the bells on earth shall ring,
On Christmas-day in the morning.

And all the angels in heaven shall sing,
On Christmas-day, on Christmas-day;
And all the angels in heaven shall sing,
On Christmas-day in the morning.

And all the souls on earth shall sing,
On Christmas-day, on Christmas-day,
And all the souls on earth shall sing,
On Christmas-day in the morning.

Then let us all rejoice amain,
On Christmas-day, on Christmas-day;
Then let us all rejoice amain,
On Christmas-day in the morning.'

The next carol, which we proceed to quote, is of a very different character, being one of those doggerel rhymes sung by children, when they go on a *gooding* excursion on Christmas-morning. An explanation of the term in italics has been already given in our notice of St Thomas's Day, to which such expeditions are more strictly appropriate. The carol, as subjoined, is sung on Christmas-morning by children in Yorkshire, who bear along with them, on the occasion, a Christmas-tree as a badge of their mission. The scene is also pictorially delineated on the following page.

'Well-a-day! well-a-day!
 Christmas too soon goes away,
 Then your *gooding* we do pray,
 For the good time will not stay—
 We are not beggars from door to door,
 But neighbours' children known before,
 So gooding pray,
 We cannot stay,
 But must away,
 For the Christmas will not stay,
 Well-a-day! well-a-day.'

Christmas carols are sung on Christmas Eve as well as on the morning of Christmas-day, and indeed the former is regarded by many as the more appropriate occasion. Then the choristers,

attached to the village-church, make their rounds to the principal houses throughout the parish, and sing some of those simple and touching hymns. The airs to which they are sung are frequently no less plaintive and melodious than the words, and are often accompanied by instruments. The writer retains a vivid recollection of a carol which he heard sung, some years ago, on Christmas Eve by a detachment of the village choir, in front of a country-house in Devonshire, where he was at the time a visitor. The sweet and pathetic melody, which was both remarkably well sung and played, the picturesqueness of the group of singers, whose persons were only rendered visible, in the darkness of the night, by the light of one or two lanterns which they

CHRISTMAS-MORNING CAROL BY CHILDREN IN YORKSHIRE.

carried, and the novelty and general interest of the scene, all produced an impression which was never to be forgotten. These Christmas-eve carols are very general in Devonshire, and the usual custom for the singers is to club the money which they receive on such occasions, and expend it in a social merry-making on Twelfth Day, a fortnight afterwards.

One or two poets of note have essayed carol-writing, among whom may be mentioned Bishop Hall and Robert Herrick, both belonging to the earlier half of the seventeenth century. And here, though we have already quoted so largely, we cannot refrain from introducing the following singularly beautiful effusion of Herrick, forming the first part of a poem, entitled the *Star Song*, written as a hymn for the Epiphany, but of which the first three stanzas, as here presented, are fully as applicable to Christmas. It glows with an imagery truly oriental:

750

'A flourish of music: then follows the Song.

Tell us, thou clear and heavenly tongue,
 Where is the Babe that lately sprung?
 Lies he the lily-banks among?

Or say, if this new Birth of ours
 Sleeps, laid within some ark of flowers,
 Spangled with dew-light; thou canst clear
 All doubts, and manifest the where.

Declare to us, bright star, if we shall seek
 Him in the morning's blushing cheek,
 Or search the beds of spices through,
 To find him out?'

These charming verses are introduced in a very beautiful *Book of Christmas Carols*, published in 1846, adorned with splendid illuminations from manuscripts preserved in the British Museum. The typography of the lyric in question is literally

bedded among a most lovely and characteristic group of fruits and flowers.

We find scarcely any traces of the singing of Christmas carols in Scotland, though from time immemorial it has been so universally prevalent, not only in England, but in France, Italy, and other countries of the continent. In England, at one time, it was customary on Christmas-day, more especially at the afternoon-service, to sing carols in churches, instead of the regular psalms and hymns. We are, moreover, informed that at the end of the service it was the usage on such occasions for the clerk in a loud voice to wish all the congregation A Merry Christmas and a Happy New-Year.

The Three Magi.

In connection with the birth of the Saviour, and as a pendant to the notice under Twelfth Day, or the Epiphany of the observances commemorative of the visit of the Wise Men of the East to Bethlehem (see vol. i. p. 61), we shall here introduce some further particulars of the ideas current in medieval times on the subject of these celebrated personages.

The legend of the Wise Men of the East, or, as they are styled in the original Greek of St Matthew's gospel, *Magoi* (the Magi), who visited the infant Saviour with precious offerings, became, under monkish influence, one of the most popular during the middle ages, and was told with increased and elaborated perspicuity as time advanced. The Scripture nowhere informs us that these individuals were kings, or their number restricted to three. The legend converts the Magi into kings, gives their names, and a minute account of their stature and the nature of their gifts. Melchior (we are thus told) was king of Nubia, the smallest man of the triad, and he gave the Saviour a gift of gold. Balthazar was king of Chaldea, and he offered incense; he was a man of ordinary stature. But the third, Jasper, king of Tarshish, was of high stature, 'a black Ethiopie,' and he gave myrrh. All came with 'many rich ornaments belonging to king's array, and also with mules, camels, and horses loaded with great treasure, and with multitude of people,' to do homage to the Saviour, 'then a little child of xiii dayes olde.'

The barbaric pomp involved in this legend made it a favourite with artists during the middle ages. Our engraving is a copy from a circular plate of silver, chased in high-relief, and partly gilt, which is supposed to have formed the centre of a morse, or large brooch, used to fasten the decorated cope of an ecclesiastic in the latter part of the fourteenth century. The subject has been frequently depicted by the artists subsequent to this period. Van Eyck, Durer, and the German schools were particularly fond of the theme—the latest and most striking work being that by Rubens, who revelled in such pompous displays. The artists of the Low Countries were, probably, also biassed by the fact, that the cathedral of Cologne held the shrine in which the bodies of the Magi were said to be deposited, and to which the faithful made many pilgrimages, greatly to the emolument of the city, a result which induced the worthy burghers to distinguish their shield of arms by three crowns only, and to designate the Magi as 'the three kings of Cologne.'

It was to the Empress Helena, mother of Constantine the Great, that the religious world was indebted for the discovery of the place of burial of these kings in the far east. She removed their bodies to Constantinople, where they remained in the church of St Sophia, until the reign of the Emperor

Emanuel, who allowed Eustorgius, bishop of Milan, to transfer them to his cathedral. In 1164, when the Emperor Frederick conquered Milan, he gave these treasured relics to Raynaldus, archbishop of Cologne, who removed them to the latter city. His successor, Philip von Heinsberg, placed them in a magnificent reliquary, enriched with gems and enamels, still remaining in its marble shrine in the cathedral, one of the chief wonders of the noble pile, and the principal 'sight' in Cologne. A

heavy fee is exacted for opening the doors of the chapel, which is then lighted with lamps, producing a dazzling effect on the mass of gilded and jewelled sculpture, in the centre of which may be seen the three skulls, reputed to be those of the Magi. These relics are enveloped in velvet, and decorated with embroidery and jewels, so that the upper part of each skull only is seen, and the hollow eyes which, as the faithful believe, once rested on the Saviour.

THE OFFERING OF THE MAGI.

The popular belief in the great power of intercession and protection possessed by the Magi, as departed saints, was widely spread in the middle ages. Any article that had touched these skulls was believed to have the power of preventing accidents to the bearer while travelling, as well as to counteract sorcery, and guard against sudden death. Their names

were also used as a charm, and were inscribed upon girdles, garters, and finger-rings. We engrave two specimens of such rings, both works of the fourteenth century. The upper one is of silver, with the names of the Magi engraved upon it; the lower one is of lead simply cast in a mould, and sold cheap for the use of the

commonalty. They were regarded as particularly efficacious in the case of cramp. Traces of this superstition still linger in the curative properties popularly ascribed to certain rings.

Bishop Patrick, in his *Reflections on the Devotions of the Roman Church*, 1674, asks with assumed naïveté how these names of the three Wise Men—Melchior, Balthazar, and Jasper—are to be of service, 'when another tradition says they were Apellius, Amerus, and Damascus; a third, that they were Megalath, Galgalath, and Sarasin; and a fourth calls them Ator, Sator, and Peratoras; which last I should choose (in this uncertainty) as having the more kingly sound.'

Born.—JESUS CHRIST, Saviour of the world; * Sir Isaac Newton, natural philosopher, 1642, *Woolsthorpe, near Grantham*; Johann Jacob Reiske, oriental scholar, 1716, *Zorbig, Saxony*; William Collins, poet, 1720, *Chichester*; Richard Porson, Greek scholar, 1759, *East Ruston, Norfolk*.

Died.—Persius, satiric poet, 62 A.D.; Pope Adrian I., 795; Emperor Leo V., the Armenian, slain at Constantinople, 820; Sir Matthew Hale, eminent judge, 1676; Rev. James Hervey, author of the *Meditations*, 1758, *Weston Favell, Northamptonshire*; Mrs Chapone, moral writer, 1801, *Hadley, Middlesex*; Colonel John Gurwood, editor of Wellington's *Dispatches*, 1854, *Brighton*.

CHRISTMAS CHARITIES.

We have already, in commenting on Christmas-day and its observances, remarked on the hallowed feelings of affection and good-will which are generally called forth at the celebration of this anniversary. Quarrels are composed and forgotten, old friendships are renewed and confirmed, and a universal spirit of charity and forgiveness evoked. Nor is this charity merely confined to acts of kindness and generosity among equals; the poor and destitute experience the bounty of their richer neighbours, and are enabled like them to enjoy themselves at the Christmas season. From the Queen downwards, all classes of society contribute their mites to relieve the necessities and increase the comforts of the poor, both as regards food and raiment. Even in the work-houses—those abodes of

short-commons and little ease—the authorities, for once in the year, become liberal in their housekeeping, and treat the inmates on Christmas-day to a substantial dinner of roast-beef and plum-pudding. It is quite enlivening to read the account in the daily papers, a morning or two afterwards, of the fare with which the inhabitants of the various work-houses in London and elsewhere were regaled on Christmas-day, a detailed chronicle being furnished both of the quality of the treat and the quantity supplied to each individual. Beggars, too, have a claim on our charity at this season, maugre all maxims of political economy, and must not be turned from our doors unrelieved. They may, at least, have their dole of bread and meat; and to whatever bad uses they may possibly turn our bounty, it is not probable that the deed will ever be entered to our discredit in the books of the Recording Angel. Apropos of these sentiments, we introduce the following monitory lines by a well-known author and artist:

SCATTER YOUR CRUMBS.

BY ALFRED CROWQUILL.

Amidst the freezing sleet and snow,
The timid robin comes;
In pity drive him not away,
But scatter out your crumbs.

And leave your door upon the latch
For whosoever comes;
The poorer they, more welcome give,
And scatter out your crumbs.

All have to spare, none are too poor,
When want with winter comes;
The loaf is never all your own,
Then scatter out the crumbs.

Soon winter falls upon your life,
The day of reckoning comes;
Against your sins, by high decree,
Are weighed those scattered crumbs.

In olden times, it was customary to extend the charities of Christmas and the New Year to the lower animals. Burns refers to this practice in 'The Auld Farmer's Address to his Mare,' when presenting her on New-Year's morning with an extra feed of corn:

'A guid New-year, I wish thee, Maggie!
Hae, there's a ripp to thy auld baggie!'

The great-grandfather of the writer—a small proprietor in the Carse of Falkirk, in Scotland, and an Episcopalian—used regularly himself, every Christmas-morning, to carry a special supply of fodder to each individual animal in his stable and cow-house. The old gentleman was wont to say, that this was a morning, of all others in the year, when man and beast ought alike to have occasion to rejoice.

CHRISTMAS DECORATIONS.

The decking of churches, houses, and shops with evergreens at Christmas, springs from a period far anterior to the revelation of Christianity, and seems proximately to be derived from the custom prevalent during the Saturnalia of the inhabitants of Rome ornamenting their temples and dwellings with green boughs. From this latter circumstance,

* We place here this record of the Saviour's birth in accordance with the popular belief, which assigns the 25th of December as the date of that event. The reader will find the question discussed under the article on Christmas-day.

we find several early ecclesiastical councils prohibiting the members of the church to imitate the pagans in thus ornamenting their houses. But in process of time, the pagan custom was like others of a similar origin, introduced into and incorporated with the ceremonies of the church itself. The sanction of our Saviour likewise came to be pleaded for the practice, he having entered Jerusalem in triumph amid the shouts of the people, who strewed palm-branches in his way.

It is evident that the use of flowers and green boughs as a means of decoration, is almost instinctive in human nature; and we accordingly find scarcely any nation, civilised or savage, with which it has not become more or less familiar. The Jews employed it in their Feast of Tabernacles, in the month of September; the ancient Druids and other Celtic nations hung up the mistletoe and green branches of different kinds over their doors, to propitiate the woodland sprites; and a similar usage prevailed, as we have seen, in Rome. In short, the feeling thus so universally exhibited, is one of natural religion, and therefore not to be traced exclusively to any particular creed or form of worship.

Stow, that invaluable chronicler, informs us in his *Survey of London*, that 'against the feast of Christmas every man's house, as also their parish churches, were decked with holme [the evergreen oak], ivy, bayes, and whatsoever the season of the year afforded to be green. The conduits and standards in the streets were likewise garnished: among the which I read, that in the year 1444, by tempest of thunder and lightning, towards the morning of Candlemas-day, at the Leadenhall, in Cornhill, a standard of tree, being set up in the midst of the pavement, fast in the ground, nailed full of holme and ivie, for disport of Christmass to the people, was torne up and cast downe by the malignant spirit (as was thought), and the stones of the pavement all about were cast in the streets, and into divers houses, so that the people were sore aghast at the great tempest.'

The favourite plants for church decoration at Christmas are holly, bay, rosemary, and laurel. Ivy is rather objectionable, from its associations, having anciently been sacred to Bacchus, and employed largely in the orgies celebrated in honour of the god of wine. Cypress, we are informed, has been sometimes used, but its funereal relations render it rather out of place at a festive season like Christmas. One plant, in special, is excluded—the mystic mistletoe, which, from its antecedents, would be regarded as about as inappropriate to the interior of a church, as the celebration of the old Druidical rites within the sacred building. A solitary exception to this universal exclusion, is mentioned by Dr Stukeley, who says that it was one time customary to carry a branch of mistletoe, in procession to the high-altar of York Cathedral, and thereafter proclaim a general indulgence and pardon of sins at the gates of the city. We cannot help suspecting that this instance recorded by Stukeley, is to be referred to one of the burlesques on the services of the church, which, under the leadership of the Boy-bishop, or the Lord of Misrule, formed so favourite a Christmas-pastime of the populace in bygone times.

A quaint old writer thus spiritualises the practice of Christmas decorations. 'So our churches and

houses decked with bayes and rosemary, holly and ivy, and other plants which are always green, winter and summer, signify and put us in mind of His Deity, that the child that now was born was God and man, who should spring up like a tender plant, should always be green and flourishing, and live for evermore.' Festive carols, we are informed, used to be chanted at Christmas in praise of the evergreens, so extensively used at that season. The following is a specimen:

' HOLLY.

Here comes holly that is so gent,
To please all men is his intent.
Allelujah!

Whosoever against holly do cry,
In a rope shall be hung full high.
Allelujah!

Whosoever against holly do sing,
He may weep and his hands wring,
Allelujah!

IVY.

Ivy is soft and meek of speech,
Against all bale she is bliss,
Well is he that may her reach.

Ivy is green, with colours bright,
Of all trees best she is,
And that I prove will now be right.

Ivy beareth berries black,
God grant us all his bliss,
For there shall be nothing lack.'

The decorations remain in the churches from Christmas till the end of January, but in accordance with the ecclesiastical canons, they must all be cleared away before the 2d of February or Candlemas-day. The same holds good as a custom with regard to private dwellings, superstition in both cases rendering it a fatal presage, if any of these sylvan ornaments are retained beyond the period just indicated.* Herrick thus alludes to the popular prejudice.

' Down with the rosemary, and so
Down with the bayes and mistletoe;
Down with the holly, ivie, all
Wherewith ye drest the Christmas hall;

That so the superstitious find
No one least branch there left behind;
For look, how many leaves there be
Neglected there, maids trust to me,
So many goblins you shall see.'

Aubrey informs us that in several parts of Oxfordshire, it was the custom for the maid-servant to ask the man for ivy to decorate the house; and if he refused or neglected to fetch in a supply, the maids stole a pair of his breeches, and nailed them up to the gate in the yard or highway. A similar usage prevailed in other places, when the refusal to comply with such a request incurred the penalty of being debarred from the well-known privileges of the mistletoe.

* See p. 53 of this volume.

OLD ENGLISH CHRISTMAS FARE.

HE 'brave days of old' were, if rude and unrefined, at least distinguished by a hearty and profuse hospitality. During the Christmas holidays, open-house was kept by the barons and knights, and for a fortnight and upwards, nothing was heard of but revelry and feasting. The grand feast, however, given by the feudal chieftain to his friends and retainers, took place with great pomp and circumstance on Christmas-day. Among the dishes served up on this important occasion, the boar's head was first at the feast and foremost on the board. Heralded by a jubilant flourish of trumpets, and accompanied by strains of merry minstrelsy, it was carried—on a dish of gold or silver, no meaner metal would suffice—into the banqueting-hall by the sewer; who, as he advanced at the head of the stately procession of nobles, knights, and ladies, sang:

*'Caput apri defero,
Reddens laudes Domino.*

The boar's head in hand bring I
With garlands gay and rosemary;
I pray you all sing merrily,
Qui estis in convivio.

The boar's head, I understand,
Is the chief service in this land;
Look wherever it be found,
Servite cum cantico.

Be glad, both more and less,
For this hath ordained our steward,
To cheer you all this Christmas—
The boar's head and mustard!
*Caput apri defero,
Reddens laudes Domino.'*

The brawner's head was then placed upon the table with a solemn gravity befitting the dignity of such a noble dish:

'Sweet rosemary and bays around it spread;
His foaming tusks with some large pippin graced,
Or midst those thundering spears an orange placed,
Sauce, like himself, offensive to its foes,
The roguish mustard, dangerous to the nose.'

The latter condiment was indispensable. An old book of instruction for the proper service of the royal table says emphatically: 'First set forth mustard with brawn; take your knife in your hand, and cut brawn in the dish as it lieth, and lay on your sovereign's trencher, and *see there be mustard!*'

When Christmas, in the time of the Commonwealth, was threatened with extinction by act of parliament, the tallow-chandlers loudly complained that they could find no sale for their mustard, because of the diminished consumption of brawn in the land. Parliament failed to put down Christmas, but the boar's-head never recovered its old supremacy at the table. Still, its memory was cherished in some nooks and corners of Old England long after it had ceased to rule the roast. The lessee of the tithes of Horn Church, Essex, had, every Christmas, to provide a boar's-head, which, after being dressed and garnished with bay, was wrestled for in a field adjoining the church. The custom of serving up the ancient dish at Queen's College, Oxford, to a variation of the old carol, sprung, according to the university legend, from a valorous act on the part of a student of the college in question. While walking in Shotover forest, studying his Aristotle, he was suddenly made aware of the presence of a

wild-boar, by the animal rushing at him open-mouthed. With great presence of mind, and the exclamation, 'Græcum est,' the collegian thrust the philosopher's ethics down his assailant's throat, and having choked the savage with the sage, went on his way rejoicing.

The Lord Jersey of the Walpolian era was a great lover of the quondam Christmas favourite, and also—according to her own account—of Miss Ford, the lady whom Whitehead and Lord Holderness thought so admirably adapted for Gray's friend, Mason, 'being excellent in singing, loving solitude, and full of immeasurable affectations.' Lord Jersey sent Miss Ford a boar's head, a strange first present, at which the lady laughed, saying she 'had often had the honour of meeting it at his lordship's table, and would have ate it had it been eatable!' Her noble admirer resented the scornful insinuation, and indignantly replied, that the head in question was not the one the lady had seen so often, but one perfectly fresh and sweet, having been taken out of the pickle that very morning; and not content with defending his head, Lord Jersey revenged himself by denying that his heart had ever been susceptible of the charms of the fair epicure.

Next in importance to the boar's-head as a Christmas-dish came the peacock. To prepare Argus for the table was a task entailing no little trouble. The skin was first carefully stripped off, with the plumage adhering; the bird was then roasted; when done and partially cooled, it was sewed up again in its feathers, its beak gilt, and so sent to table. Sometimes the whole body was covered with leaf-gold, and a piece of cotton,

saturated with spirits, placed in its beak, and lighted before the carver commenced operations. This 'food for lovers and meat for lords' was stuffed with spices and sweet herbs, basted with yolk of egg, and served with plenty of gravy; on great occasions, as many as three fat wethers being bruised to make enough for a single peacock.

The noble bird was not served by common hands; that privilege was reserved for the lady-guests most distinguished by birth or beauty. One of them carried it into the dining-hall to the sound of music, the rest of the ladies following in due order. The bearer of the dish set it down before the master of the house or his most honoured guest. After a tournament, the victor in the lists was expected to shew his skill in cutting up inferior animals. On such occasions, however, the bird was usually served in a pie, at one end of which his plumed crest appeared above the crust, while at the other his tail was unfolded in all its glory. Over this splendid dish did the knights-errant swear to undertake any perilous enterprise that came in their way, and succour lovely woman in distress after the most approved chevalier fashion. Hence Justice Shallow derived his oath of 'By cock and pie!' The latest instance of peacock-eating we can call to mind, is that of a dinner given to William IV. when Duke of Clarence, by the governor of Grenada; when his royal highness was astonished by the appearance of the many-hued bird, dressed in a manner that would have delighted a medieval Ude or Soyer.

Geese, capons, pheasants drenched with amber-grease, and pies of carps-tongues, helped to furnish the table in bygone Christmases, but there was one national dish—neither flesh, fowl, nor good red herring—which was held indispensable. This was furmante, frumenty or furnety, concocted—according to the most ancient formula extant—in this wise: 'Take clean wheat, and bray it in a mortar, that the hulls be all gone off, and seethe it till it burst, and take it up and let it cool; and take clean fresh broth, and sweet milk of almonds, or sweet milk of kine, and temper it all; and take the yolks of eggs. Boil it a little, and set it down and mess it forth with fat venison or fresh mutton.' Venison was seldom served without this accompaniment, but furnety, sweetened with sugar, was a favourite dish of itself, the 'clean broth' being omitted when a lord was to be the partaker.

Mince-pies were popular under the name of 'mutton-pies,' so early as 1596, later authorities all agreeing in substituting neat's-tongue in the place of mutton, the remaining ingredients being much the same as those recommended in modern recipes. They were also known as shred and Christmas pies:

'Without the door let sorrow lie,
And if for cold it hap to die,
We'll bury it in a Christmas-pie,
And evermore be merry!'

In Herrick's time it was customary to set a watch upon the pies, on the night before Christmas, lest sweet-toothed thieves should lay felonious fingers on them; the jovial vicar sings:

'Come guard the Christmas-pie,
That the thief, though ne'er so sly,
With his flesh-hooks don't come nigh,
To catch it,

From him, who all alone sits there,
Having his eyes still in his ear,
And a deal of nightly fear,
To watch it.'

Selden tells us mince-pies were baked in a coffin-shaped crust, intended to represent the cratch or manger in which the Holy Child was laid; but we are inclined to doubt his statement, as we find our old English cookery-books always style the crust of a pie 'the coffin.'

When a lady asked Dr Parr on what day it was proper to commence eating mince-pies, he answered, 'Begin on O. Sapientia (December 16th), but please to say Christmas-pie, not mince-pie; mince-pie is puritanical.' The doctor was wrong at least on the last of these points, if not on both. The Christmas festival, it is maintained by many, does not commence before Christmas Eve, and the mince-pie was known before the days of Praise-God Barebones and his strait-laced brethren, for Ben Jonson personifies it under that name in his *Masque of Christmas*. Likely enough, the name of 'Christmas-pie' was obnoxious to puritanical ears, as the enjoying of the dainty itself at that particular season was offensive to puritan taste:

'All plums the prophet's sons deny,
And spice-broths are too hot;
Treason's in a December-pie,
And death within the pot.'

Or, as another rhymster has it:

'The high-shoe lords of Cromwell's making
Were not for dainties—roasting, baking;
The chiefest food they found most good in,
Was rusty bacon and bag-pudding;
Plum-broth was popish, and mince-pie—
O that was flat idolatry!'

In after-times, the Quakers took up the prejudice, and some church-going folks even thought it was not meet for clergymen to enjoy the delicacy, a notion which called forth the following remonstrance from Bickerstaffe.—'The Christmas-pie is, in its own nature, a kind of consecrated cake, and a badge of distinction; and yet it is often forbidden, the Druid of the family. Strange that a sirloin of beef, whether boiled or roasted, when entire is exposed to the utmost depredations and invasions; but if minced into small pieces, and tossed up with plumbs and sugar, it changes its property, and forsooth is meat for his master.'

Mortifying as Lord Macartney's great plum-pudding failure may have been to the diplomatist, he might have consoled himself by remembering that plum-porridge was the progenitor of the pride and glory of an English Christmas. In old times, plum-pottage was always served with the first course of a Christmas-dinner. It was made by boiling beef or mutton with broth, thickened with brown bread; when half-boiled, raisins, currants, prunes, cloves, mace and ginger were added, and when the mess had been thoroughly boiled, it was sent to table with the best meats. Sir Roger de Coverley thought there was some hope of a dissenter, when he saw him enjoy his porridge at the hall on Christmas-day. Plum-broth figures in *Poor Robin's Almanac* for 1750, among the items of Christmas fare, and Mrs Frazer, 'sole teacher of the art of cookery in Edinburgh, and several years' colleague, and afterwards successor to Mrs

McIver,' who published a cookery-book in 1791, thought it necessary to include plum-pottage among her soups. Brand partook of a tureenful of 'luscious plum-porridge,' at the table of the royal chaplain in 1801, but that is the latest appearance of this once indispensable dish of which we have any record.

As to plum-pudding, we are thoroughly at fault. Rabisha gives a recipe in his *Whole Body of Cookery Dissected* (1675), for a pudding to be boiled in a basin, which bears a great resemblance to our modern Christmas favourite, but does not include it in his bills of fare for winter, although 'a dish of stewed broth, if at Christmas,' figures therein. It shared honours with the porridge in Addison's time, however, for the *Tatler* tells us: 'No man of the most rigid virtue gives offence by an excess in plum-pudding or plum-porridge, because they are the first parts of the dinner;' but the Mrs Frazer above mentioned is the earliest culinary authority we find describing its concoction, at least under the name of 'plumb-pudding.'

While Christmas, as far as eating was concerned, always had its specialities, its liquor *carte* was unlimited. A carolist of the thirteenth century sings (we follow Douce's literal translation):

'Lordlings, Christmas loves good drinking,
Wines of Gascoigne, France, Anjou,
English ale that drives out thinking,
Prince of liquors, old or new.
Every neighbour shares the bowl,
Drinks of the spicy liquor deep;
Drinks his fill without control,
Till he drowns his care in sleep.'

And to attain that end every exhilarating liquor was pressed into service by our ancestors.

THE CHRISTIAN AND OTHER ERAS IN CHRONOLOGY.

The *Christian Era* adopts a particular year as a commencement or starting-point, from which any subsequent year may be reckoned. It has no particular connection with *Christmas-day*, but it may suitably be noticed in this place as associated with that great festival.

All nations who have made any great advance in civilisation, have found it useful to adopt some particular year as a chronological basis. The Romans adopted for this purpose the year, and even the day, which some of their historians assigned as the date for the foundation of Rome. That particular date, designated according to our present chronology, was the 21st of April, in the year 754 B.C. They were wont to express it by the letters A. U. C., or *Ab urbe condita*, signifying 'from the foundation of the city.' The change effected in the calendar by the first two Cæsars, and which, with the alteration afterwards rendered necessary by the lapse of centuries, forms, to the present day, the standard for computing the length and divisions of the year, took place 47 B.C. or 707 A. U. C.

The *Olympiads* were a Greek mode of computing time, depending on chronological groups, each of which measured respectively four years in length. They began in 776 B.C., in commemoration of an event connected with the Olympic Games. Each period of four years was called an *Olympiad*; and any

particular date was denoted by the number of the Olympiad, and the number of the year in it; such as the third year of the first Olympiad, the first year of the fourth Olympiad, and so on. The Greeks, like the Romans, made in ancient times their civil years a little longer or a little shorter than the true year, and were, like them, forced to reform their calendar occasionally. One of these reforms was made by Meton in 432 B.C., a year which corresponded to the fourth year of the eighty-sixth Olympiad; and another in 330 B.C. When the power of Greece sank to a shadow under the mighty influence of that of Rome, the mode of reckoning by Olympiads gradually went out of use.

The *Christian Era*, which is now adopted by all Christian countries, dates from the year in which Christ was born. According to Greek chronology, that year was the fourth of the 194th Olympiad; according to Roman, it was the year 753 A. U. C.—or 754, if the different dates for beginning the year be rectified. It is remarkable, however, that the Christian era was not introduced as a basis of reckoning till the sixth century; and even then its adoption made very slow progress. There is an ambiguity connected with the Christian era, which must be borne in mind in comparing ancient dates. Some chronologists reckon the year immediately before the birth of Christ, as 1 B.C.; while others call it 0 B.C., reserving 1 B.C. for the actual year of the birth. There is much to be adduced in favour of each of these plans; but it suffices to say that the former is the one most usually adopted.

The *Julian Period* is a measure of time proposed by Joseph Scaliger, consisting of the very long period of 7980 years. It is not, properly speaking, a chronological era; but it is much used by chronologists on account of its affording considerable facilities for comparing different eras with each other, and in marking, without ambiguity, the years before Christ. The number of years (7980) forming the Julian period, marks the interval after which the sun, moon, and earth will come round to exactly the same positions as at the commencement of the cycle. The exact explanation is too technical to be given here; but we may mention the following two rules:—To convert any date B.C. into the Julian system, subtract the year B.C. from 4714, and the remainder is the corresponding year in the Julian period; to convert any date A.D. into the Julian system, add 4713 to the year of the Christian era.

The *Mohammedan Era*, used by most or all Mohammedan nations, dates from the flight of Mohammed to Medina—the 15th of July, 622 A. D. This date is known as the *Hegira*, or flight. As the Christian era is supposed to begin on the 1st of January, year 0, a process of addition will easily transfer a particular date from the Mohammedan to the Christian era.

For some purposes, it is useful to be able to transfer a particular year from the Roman to the Christian era. The rule for doing so is this: If the given Roman year be less than 754, deduct it from 754; if the given Roman year be not less than 754, deduct 753 from it; the remainder gives the year B.C. in the one case, and A.D. in the other.

In like manner it may be useful to know how to convert years of the Greek Olympiads to years of the Christian era. It is done thus: Multiply the next preceding Olympiad by 4, and add the odd years; subtract the sum from 777 if before Christ,

or subtract 776 from the sum if after Christ ; and the remainder will be the commencement of the given year—generally about the middle of July in the Christian year.

In regard to all these five eras (and many others of less importance), there is difficulty and confusion in having to count sometimes backwards and sometimes forward, according as a particular date is before or after the commencement of the era. To get over this complexity, the *Creation of the World* has been adopted, by Christians and Jews alike, as the commencement of a universal era. This would be unexceptionable, if authorities agreed as to the number of years which elapsed between that event and the birth of Christ ; but so far are they from agreeing, that, according to competent authorities, there are *one hundred and forty* different computations of this interval ! The one most usually adopted by English writers is 4004 years ; but they vary from 3616 up to 6484 years. The symbol A.M., or *Anno Mundi*, signifying 'year of the world,' is arrived at by adding 4004 to the Christian designation for the year—that is, if the popular English chronology be adopted. There are, however, three other calculations for the year of the world that have acquired some historical note ; and the best almanacs now give the following among other adjustments of eras—taking the year 1863 as an example.

Christian Era (A. D.),	1863
Roman Year (A. U. C.),	2616
Anno Mundi (Jewish account),	5623
" " (Alexandrian account),	7355
" " (Constantinopolitan),	7371
" " (Popular Chronology),	5867
Mohammedan Era (A. H.),	1279
Julian Period,	6576

SIR ISAAC NEWTON AND THE APPLE.

The Christmas-day of 1642 was marked by the birth of one of the world's greatest men—one who effected more than any other person in rendering the world familiar to us, in an astronomical point of view. During his long and invaluable life, which extended to the 20th of March 1727 (he presided at the meeting of the Royal Society so late as the 28th of February in that year, when more than eighty-four years of age), his researches extended over an illimitable domain of science, and are imperishably written on the page of philosophy. One or two incidents connected with his life will be found narrated in a previous article (vol. i. p. 399) ; but we may suitably notice, in this place, the remarkable way in which the grandest and most sublime of all his discoveries has become popularly associated with a very trivial circumstance—the fall of an apple.

It is curious to trace the manner in which this apple-story has been told by different writers, and the different opinions formed concerning it. Pemberton, who received from Newton himself the history of his first ideas of gravitation, does not mention the apple, but speaks simply of the idea having occurred to the philosopher 'as he sat alone in a garden.' Voltaire says : 'One day, in the year 1666, Newton went into the country, and seeing fruit fall from a tree (as his niece, Madame Conduit, has informed me), entered into a profound train of thought as to the causes which could lead to such

a drawing-together or attraction.' Martin Folkes speaks of the fruit being an apple. Hegel, referring to this subject, alludes contemptuously to the story of the apple, as a modern version of the history of the tree of knowledge, with whose fruit the serpent beguiled Eve. Gauss, a great mathematician, who believes that a philosopher worthy of the name would not need to have his attention drawn to the subject by so trivial an incident, says : 'The history of the apple is too absurd. Whether the apple fell or not, how can any one believe that such a discovery could in that way be accelerated or retarded ? Undoubtedly, the occurrence was something of this sort. There comes to Newton a stupid importunate man, who asks him how he hit upon his great discovery. When Newton had convinced himself what a noodle he had to do with, and wanted to get rid of the man, he told him that an apple fell on his nose ; and this made the matter quite clear to the man, and he went away satisfied.'

Sir David Brewster, in his *Life of Newton*, does not expressly declare either his acceptance or rejection of the apple-legend ; but his tone denotes the former rather than the latter. He considers the date to have been more probably 1665 than 1666, when 'the apple is said to have fallen from the tree at Woolsthorpe, and suggested to Newton the idea of gravity. When sitting alone in the garden, and speculating on the power of gravity, it occurred to him that as the same power by which the apple fell to the ground was not sensibly diminished at the greatest distance from the centre of the earth to which we can reach, neither at the summits of the loftiest spires, nor on the tops of the highest mountains, it might extend to the moon and retain her in her orbit, in the same manner as it bends into a curve a stone or a cannon ball, when projected in a straight line from the surface of the earth. If the moon was thus kept in her orbit by gravitation to the earth, or, in other words, its attraction, it was equally probable, he thought, that the planets were kept in their orbits by gravitating towards the sun. Kepler had discovered the great law of the planetary motions, that the squares of their periodic times were as the cubes of their distances from the sun ; and hence Newton drew the important conclusion, that the force of gravity or attraction, by which the planets were retained in their orbits, varies as the square of their distances from the sun. Knowing the force of gravity at the earth's surface, he was, therefore, led to compare it with the force exhibited in the actual motion of the moon, in a circular orbit ; but having assumed that the distance of the moon from the earth was equal to sixty of the earth's semi-diameters, he found that the force by which the moon was drawn from its rectilinear path in a second of time was only 13.9 feet, whereas, at the surface of the earth it was 16.1 feet. This great discrepancy between his theory and what he then considered to be the fact, induced him to abandon the subject, and pursue other subjects with which he had been previously occupied.' In a note, Sir David adverts to the fact that both Newton's niece and Martin Folkes (who was at that time president of the Royal Society) had mentioned the story of the apple ; but that neither Whiston nor Pemberton had done so. He speaks of a proceeding of his own, which denotes an affection towards Newton's

tree at Woolsthorpe, such as might be felt by one who believed the story: 'We saw the apple-tree in 1814, and brought away a portion of one of its roots. The tree was so much decayed that it was taken down in 1820, and the wood of it carefully preserved by Mr Turner of Stoke Rocheford.'

Professor De Morgan, in a discussion which arose on this subject a few years ago in the pages of *Notes and Queries*, points out somewhat satirically, that the fact of such a tree having stood in Newton's garden, goes very little way towards proving that the fall of an apple from that tree suggested the mighty theory to the philosopher; and he illustrates it by the story of a man who once said: 'Sir, he made a chimney in my father's house, and the bricks are alive to this day to testify it; therefore deny it not.' Mr De Morgan believes that the current story grew out of a conversation, magnified in the way of which we have such a multitude of instances. Sir Isaac, in casual talk with his niece, may have mentioned the fall of some fruit as having once struck his mind, when he was pondering on the moon's motion; and she, without any intention of deceiving, may have retailed this conversation in a way calculated to give too much importance to it. 'The story of the apple is pleasant enough, and would need no serious discussion, if it were not connected with a remarkable misapprehension. As told, the myth is made to convey the idea that the fall of an apple put into Newton's mind what had never entered into the mind of any one before him—namely, the same kind of attraction between several bodies as exists between an apple and the earth. In this way, the real glory of such men as Newton is lowered. It should be known that the idea had been for many years floating before the minds of physical inquirers, in order that a proper estimate may be formed of the way in which Newton's power cleared away the confusion, and vanquished the difficulties which had prevented very able men from proceeding beyond conjecture.' Mr De Morgan proceeds to shew that Kepler, Bouillard, and Huyghens, had all made discoveries, or put forth speculations, relating to the probable law by which the heavenly bodies attract each other; and that Newton, comparing those partial results, and bringing his own idea of universal gravitation to bear upon them, arrived at his important conclusions, without needing any such aid as the fall of an apple.

It may be mentioned as a curious circumstance, that a controversy arose, a few years ago, on the question whether or not Cicero anticipated Newton in the discovery or announcement of the great theory of gravitation. The matter is worthy of note, because it illustrates the imperfect way in which that theory is often understood. In the *Tusculan Disputations* of Cicero, this passage occurs: '*Quæ omnia delata gravitate medium mundi locum semper expetant.*' The meaning of the passage has been regarded as somewhat obscure; and in some editions *In quâ* occurs instead of *Quæ*; nevertheless the idea is that of a *central point*, towards which all things gravitate. In all probability, others preceded Cicero in enunciating this theory. But Newton's great achievement was to dismiss this idea of a *fixed point* altogether, and to substitute the theory of *universal* for that of *central* gravitation; that is, that *every* particle gravitates towards every other. If this principle be admitted,

together with the law that the force of the attraction varies inversely as the square of the distance, then the whole of the sublime system of astronomy, so far as concerns the movements of the heavenly bodies, becomes harmonious and intelligible. Assuredly Cicero never conceived the Newtonian idea, that when a ball falls to meet the earth, the earth rises a little way to meet the ball—which is one consequence of the law, that the ball attracts the earth, as well as being attracted by it.

We may expect, in spite of all the arguments of the sages, that the story of the apple will continue in favour. In the beautiful new museum at Oxford, the statue of Newton is sculptured with the renowned pippin at the philosopher's feet.

LEGEND OF THE GLASTONBURY THORN.

The miraculous thorn-tree of Glastonbury Abbey, in Somersetshire, was stoutly believed in until very recent times. One of the first accounts of it in print was given in Hearne's *History and Antiquities of Glastonbury*, published in 1722; the narration consists of a short paper by Mr Eyston, called 'A little Monument to the once famous Abbey and Borough of Glastonbury, . . . with an Account of the Miraculous Thorn, that blows still on Christmas-day, and the wonderful Walnut-tree, that annually used to blow upon St Barnaby's Day.' 'My curiosity,' he says, 'having led me twice to Glastonbury within these two years, and inquiring there into the antiquity, history, and rarities of the place, I was told by the innkeeper where I set up my horses, who rents a considerable part of the enclosure of the late dissolved abbey, that St Joseph of Arimathea landed not far from the town, at a place where there was an oak planted in memory of his landing, called the *Oak of Avalon*; that he (Joseph) and his companions marched thence to a hill near a mile on the south side of the town, and there being weary, rested themselves; which gave the hill the name of *Weary-all-Hill*; that St Joseph stuck on the hill his staff, being a dry hawthorn-stick, which grew, and constantly budded and blowed upon Christmas-day; but, in the time of the Civil Wars, that thorn was grubbed up. However, there were, in the town and neighbourhood, several trees raised from that thorn, which yearly budded and blowed upon Christmas-day, as the old root did.'

Eyston states that he was induced, by this narration, to search for printed notices of this famous thorn; and he came to a conclusion, that 'whether it sprang from St Joseph of Arimathea's dry staff, stuck by him in the ground when he rested there, I cannot find, but *beyond all dispute it sprang up miraculously!*' This tree, growing on the south ridge of Weary-all-Hill (locally abbreviated into *Werrall*), had a double trunk in the time of Queen Elizabeth; 'in whose days a saint-like Puritan, taking offence at it, hewed down the biggest of the two trunks, and had cut down the other body in all likelihood, had he not been miraculously punished by cutting his leg, and one of the chips flying up to his head, which put out one of his eyes. Though the trunk cut off was separated quite from the root, excepting a little of the bark which stuck to the rest of the body, and lay above the ground above thirty years together, yet it still

continued to flourish as the other part of it did which was left standing; and after this again, when it was quite taken away, and cast into a ditch, it flourished and budded as it used to do before. A year after this, it was stolen away, not known by whom or whither.' We are then, on the authority of a Mr Broughton, told how the remaining trunk appeared, after its companion had been lopped off and secretly carried away. 'The remaining trunk was as big as the ordinary body of a man. It was a tree of that kind and species, in all natural respects, which we term a white thorn; but it was so cut and mangled round about in the bark, by engraving people's names resorting hither to see it, that it was a wonder how the sap and nutriment should be diffused from the root to the branches thereof, which were also so maimed and broken by comers thither, that I wonder how it could continue any vegetation, or grow at all; yet the arms and boughs were spread and dilated in a circular manner as far or further than any other trees freed from such impediments of like proportion, bearing haws as fully and plentifully as others do. The blossoms of this tree were such curiosities beyond seas, that the Bristol merchants carried them into foreign parts.' But this second trunk—which bore the usual infliction of the names of silly visitors—was in its turn doomed to destruction. 'This trunk was likewise cut down by a military saint, as Mr Andrew Paschal calls him, in the rebellion which happened in King Charles I's time. However, there are at present divers trees from it, by grafting and inoculation, preserved in the town and country adjacent; amongst other places, there is one in the garden of a currier, living in the principal street; a second at the White Hart Inn; and a third in the garden of William Strode, Esquire.' Then ensues a specimen of trading, by no means rare in connection with religious relics: 'There is a person about Glastonbury who has a nursery of them, who, Mr Paschal tells us he is informed, sells them for a crown a piece, or as he can get.' Nothing is more probable. That there *was* a thorn-tree growing on the hill, is undoubted; and if there was any religious legend concerning its mode of getting there, a strong motive would be afforded for preparing for sale young plants, after the old one had disappeared. Down to very recent times, thorn-trees have been shewn in various parts of Somersetshire, each claiming to be the Glastonbury thorn. In Withering's *Arrangement of British Plants*, the tree is described botanically, and then (in the edition of 1818) the author says: 'It does not grow within the abbey at Glastonbury, but in a lane beyond the churchyard, on the other side of the street, by the side of a pit. It appears to be a very old tree: an old woman of ninety (about thirty years ago) never remembers it otherwise than it now appears. There is another tree of the same kind, two or three miles from Glastonbury. It has been reported to have no thorns; but that I found to be a mistake. It has thorns, like other hawthorns, but which also in large trees are but few. It blossoms twice a year. The winter blossoms, which are about the size of a sixpence, appear about Christmas, and sooner if the winter be severe.' Concerning the alleged flowering of the tree on Christmas-day especially, there is a curious entry in the *Gentleman's Magazine* for January 1753, when the public were under

some embarrassment as to dates, owing to the change from the old style to the new. 'Glastonbury.—A vast concourse of people attended the noted thorn on Christmas-day, new style; but, to their great disappointment, there was no appearance of its blowing, which made them watch it narrowly the 5th of January, the Christmas-day, old style, when it blew as usual.' Whether or not we credit the fact, that the tree *did* blossom precisely on the day in question, it is worthy of note that although the second trunk of the famous legendary tree had been cut down and removed a century before, some one particular tree was still regarded as the wonderful shrub in question, the perennial miracle.

A thorn-tree was not the only one regarded with reverence at Glastonbury. Mr Eyston thus informs us of another:—'Besides the Holy Thorn, Mr Camden says there was a miraculous Walnut-Tree, which, by the marginal notes that Mr Gibson hath set upon Camden, I found grew in the Holy Churchyard, near St Joseph's Chappel. This tree, they say, never budded forth before the Feast of St Barnabas, which is on the eleventh of June, and on that very day shot out leaves and flourish't then as much as others of that kind. Mr Broughton says the stock was remaining still alive in his time, with a few small branches, which continued yearly to bring forth leaves upon St Barnabas's Day as usual. The branches, when he saw it, being too small, young, and tender to bring forth fruit, or sustain their weight; but now this tree is likewise gone, yet there is a young tree planted in its place, but whether it blows, as the old one did, or, indeed, whether it was raised from the old one, I cannot tell. Doctor James Montague, Bishop of Bath and Wells in King James I's days, was so wonderfully taken with the extraordinariness of the Holy Thorn, and this Walnut-Tree, that he thought a branch of these trees was worthy the acceptance of the then Queen Anne, King James I's consort. Fuller, indeed, ridicules the Holy Thorn; but he is severely reproved for it by Doctor Heylin (another Protestant writer), who says "he hath heard from persons of great worth and credit, dwelling near the place, that it had budded and blown upon Christmas Day," as we have above asserted.'

A flat stone, with certain initials cut in it, at the present day marks the spot where the famous tree once stood, and where, according to the legend, Joseph of Arimathea stuck his pilgrim's staff into the ground.

CHRISTMAS CUSTOM AT CUMNOR.

There is a pleasant Christmas custom connected with the parish of Cumnor, in Berkshire, the church of which is a vicarage, and a beautiful specimen of the venerable parochial edifices of that kind in England. On Christmas-day, after evening-service, the parishioners, who are liable to pay any tithes, repair to the vicarage, and are there entertained with bread, cheese, and ale. It is no benefaction on the part of the vicar, but claimed as a right on the part of the parishioners, and even the quantity of the good things which the vicar brings forward is specified. He must have four bushels of malt brewed in ale and small-beer, two bushels of wheat made into bread, and half a hundredweight of cheese; and whatever remains

unconsumed by the vicarage-payers is distributed next day, after morning-prayers, among the poor.

In connection with this parish, there is another curious custom, arising from the fact that Cassenton, a little district on the opposite side of the Thames, was once a part of it. The Cassenton people had a space on the north side of the church set apart for

their burials, and on this account paid sixpence a year to Cumnor. They had to bring their dead across the Thames at Somerford Mead, where the plank stones they used in crossing remained long after visible; thence they came along a 'riding' in Cumnor Wood, which they claimed as their church-way, beginning the psalm-singing at a

CUMNOR CHURCH, BERKSHIRE.

particular spot, which marked the latter part of the ceremonial.

Not less curious is the perambulation performed in this parish during Rogation week. On arriving at Swinford Ferry, the procession goes across and lays hold of the twigs on the opposite shore, to mark that they claim the breadth of the river as within the bounds of the parish. The ferryman then delivers to the vicar a noble (6s. 8d.), in a bowl of the river-water, along with a clean napkin. The vicar fishes out the money, wipes his fingers, and distributes the water among the people in commemoration of the custom. It seems a practice such as the Total Abstinence Society would approve of; but we are bound to narrate that the vicarages collected on the occasion, are for the most part diffused, in the form of ale, among the thirsty parishioners.*

THE SEVERE CHRISTMAS OF 1860: INTENSE COLD AND ITS EFFECTS.

The Christmas of 1860 is believed to have been the severest ever experienced in Britain. At nine o'clock in the morning of Christmas-day in that year, the thermometer, at the Royal Humane Society's Receiving House, in Hyde Park, London, marked 15° Fahrenheit, or 17° below the freezing-point, but this was a mild temperature compared with what was prevalent in many parts of the country during the preceding night. Mr E. J. Lowe, a celebrated meteorologist, writing on 25th December to the *Times*, from his observatory at Beeston, near Nottingham, says: 'This morning the temperature at four feet above the ground was 8° below zero, and on the grass 13·8° below zero, or 45·8° of frost. . . . The maximum heat yesterday was only 20°, and from 7 P.M. till 11 A.M. the

* *Bibliotheca Topographica*, iv. 23, 24.

temperature never rose as high as zero of Fahrenheit's thermometer. At the present time (12.30 P.M.), the temperature is 7° above zero at four feet, and 2.5° above zero on the grass.' Other observations recorded throughout England correspond with this account of the intensity of the cold, by which, at a nearly uniform rate, the three days from the 24th to the 26th December were characterised. The severity of that time must still be fresh in the memory of our readers. In the letter of Mr Lowe, above quoted, he speaks of having 'just seen a horse pass with icicles at his nose three inches in length, and as thick as three fingers.' Those who then wore mustaches must remember how that appendage to the upper-lip became, through the congelation of the vapour of the breath, almost instantaneously stiff and matted together, as soon as the wearer put his head out of doors.

What made this severity of cold the more remarkable, was the circumstance that for many years previously the inhabitants of the British Islands had experienced a succession of generally mild winters, and the present generation had almost come to regard as legendary the accounts which their fathers related to them of the hard frosts and terrible winters of former times. Here, therefore, was an instance of a reduction of temperature unparalleled, not only in the recollection of the oldest person living, but likewise in any trustworthy record of the past.

During the three days referred to, the damage inflicted on vegetation of all kinds was enormous. The following account of the effects of the frost in a single garden, in a well-wooded part of the county of Suffolk, may serve as a specimen of the general damage occasioned throughout England. The garden referred to is bounded on the west by a box-hedge, and on the south by a low wall, within which was a strip of shrubbery consisting of laurels, Portugal laurels, laurustinus, red cedar, arbor vitæ, phillyrea, &c. Besides these, there stood in the garden some evergreen oaks, five healthy trees of some forty years' growth, two yews (which were of unknown age, but had been large trees beyond the memory of man), and a few younger ones between thirty and forty years old. All these, with the exception of the young yew-trees, the red cedars, the box, some of the arbor vitæ, and some little evergreen oaks, were either killed outright, or else so injured that it became necessary to cut them down. Nor was this done hastily without waiting to see whether they would recover themselves; ample time was given for discovering whether it was only a temporary check from which the trees and shrubs were suffering, or whether it was an utter destruction of that part of them which was above ground. In some cases, it was found that the root was still alive, and this afterwards sent forth fresh shoots, but in other cases it turned out to be a destruction literally 'root and branch.' Some of the trees, indeed, after having been cut down level with the ground, made a desperate attempt to revive, and sent up apparently healthy shoots; but the attempt was unsuccessful, and the shoots withered.

Nor was the damage confined to the evergreens: fruit-trees suffered also; for instance, apple-trees put forth leaves and flowers, which looked well enough for a time, but, before the summer was over, these withered, as if they had been burned;

while one large walnut-tree, half a century old, not only had its young last year's shoots killed, but lost some of its largest branches.

Beyond the limits of the garden referred to, the effects of this frost were no less remarkable. Elm-trees were great sufferers; they, along with the very oaks, had many of their outer twigs killed; and a magnificent, perhaps unique, avenue of cedars of Lebanon, which must have been among the oldest of their kind in the kingdom (they were only introduced in Charles II.'s reign) was almost entirely ruined.

Notwithstanding this unexampled descent of temperature, the nadir, as it may be termed, of cold yet experienced in Britain, the period during which it continued to prevail was of such short duration that there was no time for it to effect those wonderful results which we read of in former times as occasioned by a severe and unusually protracted frost. In a former part of this work (vol. i. p. 108), we have given an account of several remarkably hard frosts, which are recorded to have taken place in England. From a periodical work we extract the following notice of similar instances which occurred chiefly on the continent of Europe in past ages. 'In the year 401, the Black Sea was entirely frozen over. In 452, the Danube was frozen, so that Thredmare marched on the ice to Swabia, to avenge his brother's death. In 642, the cold was so intense that the Strait of Dardanelles and the Black Sea were entirely frozen over. The snow, in some places, drifted to the depth of 90 feet, and the ice was heaped in such quantities on the cities as to cause the walls to fall down. In 850, the Adriatic was entirely frozen over. In 892 and 898, the vines were killed by frost, and cattle died in their stalls. In 981, the winter lasted very long and was extremely severe. Everything was frozen over, and famine and pestilence closed the year. In 1207, the cold was so intense that most of the travellers in Germany were frozen to death on the roads. In 1233, it was excessively cold in Italy; the Po was frozen from Cremona to the sea, while the heaps of snow rendered the roads impassable; wine-casks burst, and trees split by frost with an immense noise. In 1234, a pine-forest was killed by frost at Ravenna. In 1236, the frost was intense in Scotland, and the Cattegat was frozen between Norway and Jutland. In 1282, the houses in Austria were covered with snow. In 1292, the Rhine was frozen; and in Germany 600 peasants were employed to clear the way for the Austrian army. In 1314, all the rivers in Italy were frozen. In 1384, the winter was so severe that the Rhine and Scheldt were frozen, and even the sea at Venice. In 1467, the winter was so severe in Flanders that the wine was cut with hatchets to be distributed to the soldiery. In 1580, the frost was very intense in England and Denmark; both the Little and Great Belt were frozen over. In 1694, many forest-trees and oaks in England were split with the frost. In 1592, the cold was so intense, that the starved wolves entered Vienna, and attacked both men and cattle. The cold of 1540 was scarcely inferior to that of 1692, and the Zuyder-Zee was entirely frozen over. In 1776 much snow fell, and the Danube bore ice five feet thick below Vienna.'

In the winter of 1848—1849, the public journals

recorded that the mercury, on one occasion, froze in the thermometers at Aggershuus, in Sweden. Now, as mercury freezes at 39° below zero, marked scientifically as -39° , that is, 71° below the freezing-point, we know that the temperature must have been at least as low as this—perhaps several degrees lower. And yet, as we shall afterwards shew, lower degrees of temperature even than this have been experienced by the Arctic voyagers.

As might be expected, it is from the latter voyagers that we obtain some of the most interesting information concerning low temperatures. In the long and gloomy winter of the polar regions, the cold assumes an intensity of which we can form little conception. Mercurial thermometers often become useless; for when the mercury solidifies, it can sink no further in the tube, and ceases to be a correct indicator. As a more available instrument, a spirit-thermometer is then used, in which the place of mercury is supplied by rectified spirit of wine. With such thermometers, our Arctic explorers have recorded degrees of cold far below the freezing-point of mercury. Dr Kane, the American Arctic explorer, in his narrative of the Grinnell Expedition in search of Franklin, records having experienced -42° on the 7th February 1851; that is, 74° of frost, or 3° below the freezing-point of mercury.

Let us conceive what it must have been to act *a play*, in a temperature only a few degrees above this! A week after the date last mentioned, the crew of the ship engaged in the expedition referred to, performed a farce called *The Mysteries and Miseries of New York!* The outside temperature on that evening was -36° ; in the 'theatre' it was -25° behind the scenes, and -20° in the audience department. One of the sailors had to enact the part of a damsel with bare arms; and when a cold flat-iron, part of the 'properties' of the theatre, touched his skin, the sensation was like that of burning with a hot-iron. But this was not the most arduous of their dramatic exploits. On Washington's birthday, February 22, the crew had another performance. 'The ship's thermometer outside was at -46° ; inside, the audience and actors, by aid of lungs, lamps, and hangings, got as high as -30° , only 62° below the freezing-point—perhaps the lowest atmospheric record of a theatrical representation. It was a strange thing altogether. The condensation was so excessive, that we could barely see the performers; they walked in a cloud of vapour. Any extra vehemency of delivery was accompanied by volumes of smoke. Their hands steamed. When an excited Thespian took off his coat, it smoked like a dish of potatoes.'

Dr Kane records having experienced as low a temperature as -53° , or 85° below the freezing-point; but even this is surpassed in a register furnished by Sir Edward Belcher, who, in January 1854, with instruments of unquestioned accuracy, endured for *eighty-four consecutive hours*, a temperature never once higher than -50° . One night it sank to $-59\frac{1}{2}^{\circ}$; and on another occasion the degree of cold reached was $-62\frac{1}{2}^{\circ}$, or $94\frac{1}{2}^{\circ}$ below the freezing-point! Such narratives excite a curiosity to know how such intense cold can be borne by the human frame. All the accounts obtainable tend to shew that *food, clothing, activity, and cheerfulness*, are the four chief requisites.

Dr E. D. Clarke, the celebrated traveller, told Dr Whiting that he was once nearly frozen to death—not in any remote polar region, but in the very matter-of-fact county of Cambridge. After performing divine service at a church near Cambridge, one cold Sunday afternoon in 1818, he mounted his horse to return home. Sleepiness came upon him, and he dismounted, walking by the head of his horse; the torpor increased, the reins dropped from his hand, and he was just about sinking—probably never again to rise—when a passing traveller rescued him. This torpor is one of the most perilous accompaniments of extreme cold, and is well illustrated in the anecdote related of Dr Solander in a previous article.*

Sir Edward Parry remarks, in reference to extremely low temperatures: 'Our bodies appeared to adapt themselves so readily to the climate, that the scale of our feelings, if I may so express it, was soon reduced to a lower standard than ordinary; so that after being for some days in a temperature of -15° or -20° , it felt quite mild and comfortable when the thermometer rose to zero'—that is, when it was 32° below the freezing-point. On one occasion, speaking of the cold having reached the degree of -55° , he says: 'Not the slightest inconvenience was suffered from exposure to the open air by a person well clothed, so long as the weather was perfectly calm; but in walking against a very light air of wind, a smarting sensation was experienced all over the face, accompanied by a pain in the middle of the forehead, which soon became rather severe.' As a general remark, Parry on another occasion said: 'We find it necessary to use great caution in handling our sextants and other instruments, particularly the eye-pieces, of telescopes, which, if suffered to touch the face, occasioned an intense burning pain.' Sir Leopold McClintock, while sledging over the ice in March 1859, trudged with his men eight hours at a stretch, over rough hummocks of ice, without food or rest, at a temperature of -48° , or *eighty degrees below the freezing-point*, with a wind blowing too at the time. In one of the expeditions a sailor incautiously did some of his outdoor work without mittens; his hands froze; one of them was plunged into a basin of water in the cabin, and the intense cold of the hand instantly *froze the water*, instead of the water thawing the hand! Poor fellow: his hand required to be chopped off.

Dr Kane, who experienced more even than the usual share of sufferings attending these expeditions, narrates many anecdotes relating to the cold. One of his crew put an icicle at -28° into his mouth, to crack it; one fragment stuck to his tongue, and two to his lips, each taking off a bit of skin—*burning it off*, if this term might be used in an inverse sense. At -25° , 'the beard, eyebrows, eyelashes, and the downy pubescence of the ears, acquire a delicate, white, and perfectly enveloping cover of venerable hoar-frost. The moustache and under-lip form pendulous beads of dangling ice. Put out your tongue, and it instantly freezes to this icy crust, and a rapid effort, and some hand-aid will be required to liberate it. Your chin has a trick of freezing to your upper-jaw by the luting aid of your beard; my eyes have often been so glued, as to shew that even a wink may be unsafe.' In

* See vol. i. p. 642.

reference to the torpor produced by extreme cold, Dr Kane further remarks: 'Sleepiness is not the sensation. Have you ever received the shocks of a magneto-electric machine, and had the peculiar benumbing sensation of "Can't let go," extending up to your elbow-joints? Deprive this of its paroxysmal character; subdue, but diffuse it over every part of the system—and you have the so-called pleasurable feelings of incipient freezing.' One day he walked himself into 'a comfortable perspiration,' with the thermometer seventy degrees below the freezing-point. A breeze sprang up, and instantly the sensation of cold was intense. His beard, coated before with icicles, seemed to bristle with increased stiffness; and an unfortunate hole in the back of his mitten 'stung like a burning coal.' On the next day, while walking, his beard and moustache became one solid mass of ice. 'I inadvertently put out my tongue, and it instantly froze fast to my lip. This being nothing new, costing only a smart pull and a bleeding afterwards, I put up my mittened hands to "blow hot," and thaw the unruly member from its imprisonment. Instead of succeeding, my mitten was itself a mass of ice in a moment; it fastened on the upper side of my tongue, and flattened it out like a batter-cake between the two disks of a hot griddle. It required all my care with the bare hands to release it, and then not without laceration.'

The following remarkable instances of the disastrous results of extreme cold in Canada are related by Sir Francis Head:—'I one day inquired of a fine, ruddy, honest-looking man, who called upon me, and whose toes and insteps of each foot had been truncated, how the accident happened? He told me that the first winter he came from England, he lost his way in the forest, and that after walking for some hours, feeling pain in his feet, he took off his boots, and from the flesh immediately swelling, he was unable to put them on again. His stockings, which were very old ones, soon wore into holes, and as rising on his insteps he was hurriedly proceeding he knew not where, he saw with alarm, but without feeling the slightest pain, first one toe and then another break off, as if they had been pieces of brittle stick; and in this mutilated state he continued to advance till he reached a path which led him to an inhabited log-house, where he remained suffering great pain till his cure was effected. On another occasion, while an Englishman was driving, one bright beautiful day, in a sleigh on the ice, his horse suddenly ran away, and fancying he could stop him better without his cumbersome fur-gloves than with them, he unfortunately took them off. As the infuriated animal at his utmost speed proceeded, the man, who was facing a keen north-west wind, felt himself gradually, as it were, turning into marble; and by the time he stopped, both his hands were so completely and so irrecoverably frozen, that he was obliged to have them amputated.'

Englishmen, take them one with another, bear up against intense cold better than against intense heat, one principal reason being, that the air is in such circumstances less tainted with the seeds of disease. They are then more lively and cheerful, feel themselves necessitated to active and athletic exertion, and become, consequently, better able to combat the adverse influences of a low degree of temperature.

DECEMBER 26.

St Stephen, the first martyr. St Dionysius, pope and confessor, 269. St Iarlath, confessor, first bishop of Tuam, in Ireland, 6th century.

St Stephen's Day.

To St Stephen, the Proto-martyr, as he is generally styled, the honour has been accorded by the church of being placed in her calendar immediately after Christmas-day, in recognition of his having been the first to seal with his blood the testimony of fidelity to his Lord and Master. The year in which he was stoned to death, as recorded in the Acts of the Apostles, is supposed to have been 33 A.D. The festival commemorative of him has been retained in the Anglican calendar.

A curious superstition was formerly prevalent regarding St Stephen's Day—that horses should then, after being first well galloped, be copiously let blood, to insure them against disease in the course of the following year. In Barnaby Googe's translation of *Naogeorgus*, the following lines occur relative to this popular notion:

'Then followeth Saint Stephen's Day, whereon doth every man
His horses jaunt and course abroad, as swiftly as he can,
Until they doe extremely sweate, and then they let them blood,
For this being done upon this day, they say doth do them good,
And keeps them from all maladies and sicknesse through the yeare,
As if that Steven any time tooke charge of horses heare.'

The origin of this practice is difficult to be accounted for, but it appears to be very ancient, and Douce supposes that it was introduced into this country by the Danes. In one of the manuscripts of that interesting chronicler, John Aubrey, who lived in the latter half of the seventeenth century, occurs the following record: 'On St Stephen's Day, the farrier came constantly and blouded all our cart-horses.' Very possibly convenience and expediency combined on the occasion with superstition, for in *Tusser Redivivus*, a work published in the middle of the last century, we find this statement: 'About Christmas is a very proper time to bleed horses in, for then they are commonly at house, then spring comes on, the sun being now coming back from the winter-solstice, and there are three or four days of rest, and if it be upon St Stephen's Day it is not the worse, seeing there are with it three days of rest, or at least two.'

In the parish of Drayton Beauchamp, Bucks, there existed long an ancient custom, called *Stephening*, from the day on which it took place. On St Stephen's Day, all the inhabitants used to pay a visit to the rectory, and practically assert their right to partake of as much bread and cheese and ale as they chose at the rector's expense. On one of these occasions, according to local tradition, the then rector, being a penurious old bachelor, determined to put a stop, if possible, to this rather expensive and unceremonious visit from his parishioners. Accordingly, when St Stephen's Day arrived, he ordered his housekeeper not to open the

window-shutters, or unlock the doors of the house, and to remain perfectly silent and motionless whenever any person was heard approaching. At the usual time the parishioners began to cluster about the house. They knocked first at one door, then at the other, then tried to open them, and on finding them fastened, they called aloud for admittance. No voice replied. No movement was heard within. 'Surely the rector and his housekeeper must both be dead!' exclaimed several voices at once, and a general awe pervaded the whole group. Eyes were then applied to the key-holes, and to every crevice in the window-shutters, when the rector was seen beckoning his old terrified housekeeper to sit still and silent. A simultaneous shout convinced him that his design was understood. Still he consoled himself with the hope that his larder and his cellar were secure, as the house could not be entered. But his hope was speedily dissipated. Ladders were reared against the roof, tiles were hastily thrown off, half-a-dozen sturdy young men entered, rushed down the stairs, and threw open both the outer-doors. In a trice, a hundred or more unwelcome visitors rushed into the house, and began unceremoniously to help themselves to such fare as the larder and cellar afforded; for no special stores having been provided for the occasion, there was not half enough bread and cheese for such a multitude. To the rector and his housekeeper, that festival was converted into the most rigid fast-day they had ever observed.

After this signal triumph, the parishioners of Drayton regularly exercised their 'privilege of Stephening' till the incumbency of the Rev. Basil Wood, who was presented to the living in 1808. Finding that the custom gave rise to much rioting and drunkenness, he discontinued it, and distributed instead an annual sum of money in proportion to the number of claimants. But as the population of the parish greatly increased, and as he did not consider himself bound to continue the practice, he was induced, about the year 1827, to withhold his annual payments; and so the custom became finally abolished. For some years, however, after its discontinuance, the people used to go to the rectory for the accustomed bounty, but were always refused.

In the year 1834, 'the commissioners appointed to inquire concerning charities,' made an investigation into this custom, and several of the inhabitants of Drayton gave evidence on the occasion, but nothing was elicited to shew its origin or duration, nor was any legal proof advanced shewing that the rector was bound to comply with such a demand.* Many of the present inhabitants of the parish remember the custom, and some of them have heard their parents say, that it had been observed—

'As long as the sun had shone,
And the waters had run.'

In London and other places, St Stephen's Day, or the 26th of December, is familiarly known as *Boxing-day*, from its being the occasion on which those annual guerdons known as *Christmas-boxes* are solicited and collected. For a notice of them, the reader is referred to the ensuing article.

CHRISTMAS-BOXES.

The institution of Christmas-boxes is evidently akin to that of New-year's gifts, and, like it, has descended to us from the times of the ancient Romans, who, at the season of the Saturnalia, practised universally the custom of giving and receiving presents. The fathers of the church denounced, on the ground of its pagan origin, the observance of such a usage by the Christians; but their anathemas had little practical effect, and in process of time, the custom of Christmas-boxes and New-year's gifts, like others adopted from the heathen, attained the position of a universally recognised institution. The church herself has even got the credit of originating the practice of Christmas-boxes, as will appear from the following curious extract from *The Athenian Oracle* of John Dunton; a sort of primitive *Notes and Queries*, as it is styled by a contributor to the periodical of that name.

'Q. From whence comes the custom of gathering of Christmas-box money? And how long since?

A. It is as ancient as the word *mass*, which the Romish priests invented from the Latin word *mitto*, to send, by putting the people in mind to send gifts, offerings, oblations; to have masses said for everything almost, that no ship goes out to the Indies, but the priests have a box in that ship, under the protection of some saint. And for masses, as they cant, to be said for them to that saint, &c., the poor people must put in something into the priest's box, which is not to be opened till the ship return. Thus the mass at that time was *Christ's-mass*, and the box *Christ's-mass-box*, or money gathered against that time, that masses might be made by the priests to the saints, to forgive the people the debaucheries of that time; and from this, servants had liberty to get *box-money*, because they might be enabled to pay the priest for masses—because, *No penny, no paternoster*—for though the rich pay ten times more than they can expect, yet a priest will not say a mass or anything to the poor for nothing; so charitable they generally are.'

The charity thus ironically ascribed by Dunton to the Roman Catholic clergy, can scarcely, so far as the above extract is concerned, be warrantably claimed by the whimsical author himself. His statement regarding the origin of the custom under notice may be regarded as an ingenious conjecture, but cannot be deemed a satisfactory explanation of the question. As we have already seen, a much greater antiquity and diversity of origin must be asserted.

This custom of Christmas-boxes, or the bestowing of certain expected gratuities at the Christmas season, was formerly, and even yet to a certain extent continues to be, a great nuisance. The journeymen and apprentices of trades-people were wont to levy regular contributions from their masters' customers, who, in addition, were mulcted by the trades-people in the form of augmented charges in the bills, to recompense the latter for gratuities expected from them by the customers' servants. This most objectionable usage is now greatly diminished, but certainly cannot yet be said to be extinct. Christmas-boxes are still regularly expected by the postman, the lamplighter,

* See the Report of the Charity Commissioners, vol. xxvii., p. 83, in the British Museum.

the dustman, and generally by all those functionaries who render services to the public at large, without receiving payment therefor from any particular individual. There is also a very general custom at the Christmas season, of masters presenting their clerks, apprentices, and other *employés*, with little gifts, either in money or kind.

St Stephen's Day, or the 26th of December, being the customary day for the claimants of Christmas-boxes going their rounds, it has received popularly the designation of *Boxing-day*. In the evening, the new Christmas pantomime for the season is generally produced for the first time; and as the pockets of the working-classes, from the causes which we have above stated, have commonly received an extra supply of funds, the theatres are almost universally crowded to the ceiling on Boxing-night; whilst the 'gods,' or upper gallery, exercise even more than their usual authority. Those interested in theatrical matters await with considerable eagerness the arrival, on the following morning, of the daily papers, which have on this occasion a large space devoted to a chronicle of the pantomimes and spectacles produced at the various London theatres on the previous evening.

In conclusion, we must not be too hard on the system of Christmas-boxes or *handsels*, as they are termed in Scotland, where, however, they are scarcely ever claimed till after the commencement of the New Year. That many abuses did and still do cling to them, we readily admit; but there is also intermingled with them a spirit of kindness and benevolence, which it would be very undesirable to extirpate. It seems almost instinctive for the generous side of human nature to bestow some reward for civility and attention, and an additional incentive to such liberality is not unfrequently furnished by the belief that its recipient is but inadequately remunerated otherwise for the duties which he performs. Thousands, too, of the commonalty look eagerly forward to the forthcoming guerdon on Boxing-day, as a means of procuring some little unwonted treat or relaxation, either in the way of sight-seeing, or some other mode of enjoyment. Who would desire to abridge the happiness of so many?

CHRISTMAS PANTOMIMES.

Pantomimic acting had its place in the ancient drama, but the grotesque performances associated with our English Christmas, are peculiar to this country. Cibber says that they originated in an attempt to make stage-dancing something more than motion without meaning. In the early part of the last century, a ballet was produced at Drury Lane, called the *Loves of Mars and Venus*, wherein the passions were so happily expressed, and the whole story so intelligibly told by a mute narration of gesture only, that even thinking-spectators allowed it both a pleasing and rational entertainment. From this sprang forth that succession of monstrous medleys that have so long infested the stage, and which arise upon one another alternately at both houses, outvying in expense, like contending bribes at both sides at an election, to secure a majority of the multitude. Cibber's managerial rival, Rich, found himself unable, with the Lincoln's-Inn-Fields' company, to compete with Drury Lane in the legitimate drama,

and struck out a path of his own, by the invention of the comic pantomime. That he was indebted to Italy for the idea, is evident from an advertisement in the *Daily Courant*, for the 26th December 1717, in which his *Harlequin Executed* is described as 'A new Italian Mimic Scene (never performed before), between a Scaramouch, a Harlequin, a Country Farmer, his Wife, and others.' This piece is generally called 'the first English pantomime' by theatrical historians; but we find comic masques 'in the high style of Italy,' among the attractions of the patent-houses, as early as 1700. Rich seems to have grafted the scenic and mechanical features of the old masque upon the pantomimic ballet. Davies, in his *Dramatic Miscellanies*, describes Rich's pantomimes as 'consisting of two parts—one serious, the other comic. By the help of gay scenes, fine habits, grand dances, appropriate music, and other decorations, he exhibited a story from *Ovid's Metamorphoses*, or some other mythological work. Between the pauses or acts of this serious representation, he interwove a comic fable, consisting chiefly of the courtship of Harlequin and Columbine, with a variety of surprising adventures and tricks, which were produced by the magic wand of Harlequin; such as the sudden transformation of palaces and temples to huts and cottages; of men and women into wheel-barrows and joint-stools; of trees turned to houses; colonnades to beds of tulips; and mechanics' shops into serpents and ostriches.'

Pope complains in *The Dunciad*, that people of the first quality go twenty and thirty times to see such extravagances as—

'A sable sorcerer rise,
Swift to whose hand a winged volume flies :
All sudden, gorgons hiss and dragons glare,
And ten-horned fiends and giants rush to war.
Hell rises, Heaven descends, and dance on earth,
Gods, imps and monsters, music, rage, and mirth,
A fire, a jig, a battle and a ball,
Till one wide conflagration swallows all.
Thence a new world to Nature's laws unknown,
Breaks out refulgent, with a heaven its own ;
Another Cynthia her new journey runs,
And other planets circle other suns.
The forests dance, the rivers upward rise,
Whales sport in woods, and dolphins in the skies ;
And last, to give the whole creation grace,
Lo ! one vast egg produces human race.'

The success of the new entertainment was wonderfully lasting. Garrick and Shakspeare could not hold their own against Pantomime. The great actor reproaches his aristocratic patrons because—

'They in the drama find no joys,
But doat on mimicry and toys.
Thus, when a dance is in my bill,
Nobility my boxes fill ;
Or send three days before the time,
To crowd a new-made pantomime.'

And *The World* (1st March 1753) proposes that pantomime shall have the boards entirely to itself. 'People of taste and fashion have already given sufficient proof that they think it the highest entertainment the stage is capable of affording; the most innocent we are sure it is, for where nothing is said and nothing is meant, very little harm can be done. Mr Garrick, perhaps, may start a few

objections to this proposal; but with those universal talents which he so happily possesses, it is not to be doubted but he will, in time, be able to handle the wooden sword with as much dignity and dexterity as his brother Lun.'

The essayist does Rich injustice; the latter's Harlequin was something more than a dexterous performance. Rich was a first-rate pantomimic actor, to whom words were needless. Garrick bears impartial witness to the genius of the exhibitor of the eloquence of motion. In the prologue to a pantomime with a talking-hero, produced after Rich's death, he says:

'Tis wrong,
The wits will say, to give the fool a tongue.
When Lun appeared, with matchless art and whim,
He gave the power of speech to every limb;
Though masked and mute, conveyed his quick intent,
And told in frolic gestures all he meant.'

At this time the *role* of Harlequin was not considered derogatory to an actor as it is now—Woodward, who established his reputation by playing such characters as Lord Foppington, Marplot, and Sir Andrew Aguecheek, was equally popular as the party-coloured hero.

In the hands of Lun's successors, Harlequin sadly degenerated; and when Grimaldi appeared upon the scene, his genius elevated the Clown into the principal personage of the pantomime. The harlequinade still remained the staple of the piece, the opening forming a very insignificant portion. John Kemble himself did not disdain to suggest the plot of a pantomime. Writing to Tom Dibdin, he says: 'The pantomime might open with three Saxon witches lamenting Merlin's power over them, and forming an incantation, by which they create a Harlequin, who is supposed to be able to counteract Merlin in all his designs against King Arthur. If the Saxons come on in a dreadful storm, as they proceeded in their magical rites, the sky might brighten, and a rainbow sweep across the horizon, which, when the ceremonies are completed, should contract itself from either end, and form the figure of Harlequin in the heavens. The wizards may fetch him down as they will, and the sooner he is set to work the better.'—Dibdin's *Reminiscences*.

Dibdin himself was a prolific pantomime author; and we cannot give a better idea of what the old-fashioned pantomime was, than by quoting the first scene of his *Harlequin in his Element*; or *Fire, Water, Earth, and Air*, performed at Covent Garden Theatre in 1807. The *dramatis personæ* consist of Ignoso, the spirit of Fire; Aquina, the fairy of the Fountain; Aurino, genius of Air; Terrena, spirit of Earth; Harlequin (Mr Bologna, Junr.); Columbine (Miss Adams); Sir Amoroso Sordid, guardian to Columbine (Mr Ridgway); and Gaby Grin, his servant (Mr Grimaldi).

SCENE I.

A beautiful garden, with terraces, arcades, fountains, &c. The curtain rises to a soft symphony. AURINO is seen descending on a light cloud; he approaches a fountain in the centre of the garden, and begins the following duet:

Aurino. Aquina! Fountain Fairy!
The genius of the Air
Invites thee here
From springs so clear,
With love to banish care.

AQUINA, rising from fountain.

Aquina. Aurino, airy charmer,
Behold thy nymph appear.
What peril can alarm her,
When thou, my love, art near?

TERRENA rises from the earth, and addresses the other two.

Terr. Why rudely trample thus on Mother Earth?
Fairies, ye know this ground's my right by birth.
These pranks I'll punish: Water shall not rise
Above her level; Air shall keep the skies.

It thunders; Ignoso descends.

Ign. 'Tis burning shame, such quarrels' mong you three,
Though I warn you, you're always cold to me.
The sons of Earth, on every slight disaster,
Call me good servant, but a wicked master.
Of Air and Water, too, the love I doubt,
One blows me up, the other puts me out.
Nay, if you're angry, I'll have my turn too,
And you shall see what mischief I can do!

Ignoso throws the fire from his wand; the flowers all wither, but are revived by the other fairies.

Terr. Fire, why so hot? Your bolts distress not me,
But injure the fair mistress of these bowers;
Whose sordid guardian would her husband be,
For lucre, not for love. Rather than quarrel,
let us use our powers,
And gift with magic aid some active sprite,
To foil the guardian and the girl to right.

Quartett.

Ign. About it quick!
Terr. This clod to form shall grow,
Aqui. With dew refreshed—
Aur. With vital air—
Ign. And warm with magic glow.

HARLEQUIN is produced from a bed of party-coloured flowers; the magic sword is given him, while he is thus addressed:

Terr. This powerful weapon your wants will provide;
Then trip,
Aur. Free as air,
Aqui. And as brisk as the tide.
Ign. Away, while thy efforts we jointly inspire.
Terr. Tread lightly!
Aur. Fly!
Aqui. Run!
Ign. And you'll never hang fire!

IGNOSO sinks. AQUINA strikes the fountains; they begin playing. TERRENA strikes the ground; a bed of roses appears. Harlequin surveys everything, and runs round the stage. Earth sinks in the bed of roses, and Water in the fountain. Air ascends in the car. Columbine enters dancing; is amazed at the sight of Harlequin, who retires from her with equal surprise; they follow each other round the fountain in a sort of *pas de deux*. They are surprised by the entrance of Columbine's Guardian, who comes in, preceded by servants in rich liveries. Clown, as his running-footman, enters with a lapdog. Old Man takes snuff—views himself in a pocket-glass. Clown imitates him, &c. Old Man sees Harlequin and Columbine, and pursues them round the fountains, but the lovers go off, followed by Sir AMOROSO and servants.

And so the lovers are pursued by Sir Amoroso and Clown through sixteen scenes, till the fairies unite

them in the *Temple of the Elements*. The harlequinade is full of practical jokes, but contains no hits at the follies of the day throughout it all; the relative positions of Clown and Sir Amoroso, Pantaloon, or the Guardian (as he is styled indifferently), as servant and master, are carefully preserved.

Since Dibdin's time, the pantomime has undergone a complete change. The dramatic author furnishes only the opening, which has gradually become the longest part of the piece; while the harlequinade—left to the so-called pantomimists to arrange—is nothing but noise. Real pantomime-acting is eschewed altogether; Harlequin and Columbine are mere dancers and posturers; and Clown, if he does not usurp the modern Harlequin's attribute, is but a combination of the acrobat and coarse buffoon. The pantomime of the present day would certainly not be recognised by Rich or owned by Grimaldi.

Born.—Gulielmus Xylander, translator of the classics, 1532, *Augsburg*; Thomas Gray, poet, 1716, *Cornhill, London*.

Died.—Antoine Houdart de la Motte, dramatist, 1731, *Paris*; Joel Barlow, American author and diplomatist, 1812, *near Cracow*; Stephen Girard, millionaire, 1831.

STEPHEN GIRARD.

In a country, destitute of a titled and hereditary aristocracy, wealth is distinction. The accumulation of great wealth is evidence of strong character; and when the gathered riches are well used and well bestowed, they give celebrity and even renown.

Stephen Girard was the son of a common sailor of Bourdeaux, France, and was born May 21, 1750. At the age of ten he went, a cabin-boy, to New York, where he remained in the American coasting trade until he became master and part-owner of a small vessel, while he was still a youth. During the American Revolution, he kept a grocery and liquor-shop in Philadelphia, and made money enough from the American and British armies, as they successively occupied the city, to embark largely in trade with the West Indies. Fortune comes at first by slow degrees. The first thousand pounds is the step that costs. Then, in good hands, capital rolls up like a snow-ball. In 1790, Girard had made £6000. Now the golden stream began to swell. The misfortunes of others were his gain. At the time of the terrible massacre of St Domingo, he had some ships in a harbour of that island. The planters sent their plate, money, and valuables on board his vessels, and were preparing to embark, with their families, when they were massacred by the infuriated negroes. Property to the value of £10,000 was left in the hands of Girard, for which he could find no owners.

He married, but unfortunately, and soon separated from his wife, and he had no children and no friends. Yet this hard, money-making man was a hero in courage and in charity. When professing Christians fled from the yellow fever in Philadelphia, in 1793, 1797, and 1798, Girard, who had no religious belief, stayed in the city, and spent day and night in taking care of the sick and dying. As his capital accumulated, he became a banker; and when the United States government,

in the war of 1812 with England, wanted a loan of £1,000,000, and only got an offer of £400, Girard undertook the entire loan. When he died, December 26, 1831, he left £1,800,000, nearly the whole of which was bequeathed to charitable institutions, £400,000 being devoted to the foundation of a college for orphan boys. The buildings of this college, in the suburbs of Philadelphia, are constructed of white marble, in the Grecian style, and are among the most beautiful in the world.

Girard was a plain, rude man, without education, frugal and friendless; yet kind to the sick, generous to the poor, and a benefactor to the orphan.

LONDON LIFE A CENTURY AGO.

Hogarth has bequeathed us the most perfect series of pictures possessed by any nation, of the manners and custom of its inhabitants, as seen by himself. They go lower into the depths of everyday life than is usually ventured upon by his brethren of the brush. The higher-class scenes of his 'Marriage à la Mode' teach us little more than we can gather from the literature of his era; but when we study 'Gin Lane' in all its ghastly reality, we see—and shudder in contemplating it—the abyss of vice and reckless profligacy into which so large a number of the lower classes had fallen, and which was too disgusting as well as too familiar, to meet with similar record in the pages of the annalist.

There exists a curious octavo pamphlet—dedicated by its author to Hogarth himself—which minutely describes the occupation of the inhabitants of London during the whole twenty-four hours. It is unique as a picture of manners, and though rude in style, invaluable for the information it contains, and which is not to be met elsewhere. It appears to have been first published in 1759, and ran through several editions. It is entitled *Low Life: or, one half the World knows not how the other half Live*; and purports to be 'a true description of a Sunday as it is usually spent within the Bills of Mortality, calculated for the 21 day of June,' the anniversary (new style) of the accession of King George II. Mr G. A. Sala, in his volume entitled *Twice Round the Clock*, acknowledges that his description therein of the occupation of each hour of a modern London day, was suggested by the perusal of a copy of this old pamphlet, lent to him by Mr Dickens, and which had been presented to that gentleman by another great novelist, Mr Thackeray. Under such circumstances, we may warrantably assume that there is something valuable in this unpretentious brochure, and we therefore proceed to glean from it as much as may enable our readers to comprehend London life a century ago; premising that a great part of it is too gross, and a portion likewise too trivial, for modern readers.

Our author commences his description at twelve o'clock on Saturday night, at which hour, he says: 'The Salop-man in Fleet Street shuts up his gossiping coffee-house.*' Almost the next incident reminds us of the old roguery and insecurity

* The liquid known as *salop* or *saloop*, kept hot, was at one time much sold at street-corners in London, but the demand ceased about thirty years since. It was made from an infusion of sassafras, and said to be very nutritive.

of London—'watchmen taking fees from house-breakers, for liberty to commit burglaries within their beats, and at the same time promising to give them notice if there is any danger of their being taken, or even disturbed in their villanies.' The markets begin to swarm with the wives of poor journeymen shoemakers, smiths, tinkers, tailors, &c., who come to buy great bargains with little money. Dark-house Lane, near Billingsgate, in an uproar, with custom-house officers, sailors' wives, smugglers, and city-apprentices, waiting to hear the high-water bell ring, to go in the tilt-boat to Gravesend.* Ballad-singers, who have encumbered the corners of markets several hours together, repairing to the houses of appointed rendezvous, that they may share with pickpockets what had been stolen from the crowd of fools, which had stood about them all the evening. Houses which are left open, and are running to ruin, filled with beggars; some of whom are asleep, while others are pulling down the timber, and packing it up to sell for firing to washerwomen and clear-starchers. Tapsters of public-houses on the confines of London, receiving pence and twopences from those sotish citizens they have light to town from over the fields, and who were too drunk and fearful to come by themselves.

From two till three o'clock, our author notes—'Most private shops in and about London (as there are too many), where Geneva is publicly sold in defiance of the act of parliament, filled with the worst classes. Young fellows who have been out all night on the *ran-dan*, stealing staves and lanterns from such watchmen as they find sleeping on their stands. The whole company of *Finders* (a sort of people who get their bread by the hurry and negligence of sleepy tradesmen), are marching towards all the markets in London, Westminster, and Southwark; to make a seizure of all the butchers, poulterers, green-grocers, and other market-people have left behind them, at their stalls and shambles, when they went away. Night-cellars about Covent Garden and Charing-Cross, fill'd with mechanics, some sleeping, others playing at cards, with dead-beer before them, and link-boys giving their attendance. Men who intend to pretend to walk thirty or forty miles into the country, preparing to take the cool of the morning to set out on their journeys. Vagabonds who have been sleeping under hay-ricks in the neighbouring villages and fields, awaken, begin to rub their eyes, and get out of their nests.'

From three to four o'clock.—'Fools who have been up all the night, going into the fields with dogs and ducks, that they may have a morning's diversion at the noisy and cruel amusement.† Pigeon-fanciers preparing to take long rambles out of London, to give their pigeons a flight. The bulks of tradesmen's houses crowded with vagabonds, who having been picking pockets, carrying links, fetching spendthrifts from taverns, and

beating drunken-men, have now got drunk themselves and gone to sleep.* Watchmen crying "Past four o'clock," at half-an-hour after three, being persuaded that scandalous pay deserves scandalous attendance.† Poor people carrying their dead children, nailed up in small deal-boxes, into the fields to bury them privately, and save the extravagant charge of parish dues. The streets, at this time, are beginning to be quiet—the fishwomen gone to Billingsgate to wait the tide for the arrival of the mackerel-boats.'

From four till five o'clock.—'Early risers, with pipes stuck in their jaws, walking towards Hornsey Wood, Dulwich Common, Marybone, and Stepney, in order to take large morning-draughts, and secure the first fuddle of the day. Beggars going to parish nurses, to borrow poor helpless infants at fourpence a day, and persuade credulous charitable people they are their own, and have been sometime sick and fatherless. The wives and servant-girls of mechanics and day-labourers, who live in courts and alleys, where one cock supplies the whole neighbourhood with water, taking the advantage before other people are up, to fill their tubs and pans with a sufficiency to serve them the ensuing seven days.'

From five till six o'clock.—'The several new-built bun-houses about the metropolis, at Chelsea, Stepney, Stangate, Marybone, &c., are now open. People who keep she-asses about Brompton, Knightsbridge, Hoxton, and Stepney, getting ready to run with their cattle all over the town, to be milked for the benefit of sick and infirm persons. Poor people with fruit, nosegays, buns, &c., making their appearance. Petty equipages preparing to take citizens country journeys. The pump near St Antholin's Church, in Watling Street, crowded with fishwomen who are washing their stinking mackerel, to impose them on the public for fish come up with the morning's tide. Bells tolling, and the streets beginning to fill with old women and charity-children, who attend the services of the church.'

From six to seven o'clock.—'A great number of people of both sexes, especially fanciers and dealers in birds, at the Birds Nest Fair held every Sunday morning, during the season, on Dulwich Common. Beggars who have put on their woful countenances, and also managed their sores and ulcers so as to move compassion, are carrying wads of straw to the corners of the most public streets, that they may take their seats, and beg the charity of all well-disposed Christians the remaining part of the day.'

From seven to eight o'clock.—'Country fellows, newly come to London, running about to see parish churches, and find out good ale and new acquaintances. Chairmen at the court-end of the town, fast asleep in their chairs, for want of business or a better lodging. Common people going to quack-doctors, and petty barbers, in order to be let blood (and perhaps have their arms lamed) for three-pence. Abundance of lies told in barbers' shops by those who come to be shaved, many fools taking those places to be the repositories of polite education.

* The journey to Gravesend was a serious adventure in those days, always occupying twelve hours, and frequently more; if the tide turned, the passengers met with great delay, and were sometimes put ashore far from their destination. The only accommodation in these open boats, was a litter of straw, and a sail-cloth over it.

† For a further account of this sport, and one favourite London locality where it was chiefly indulged in, see p. 74 of the present volume.

* These bulks were the stalls of the open shops then very common in London—for an account of which see vol. i. p. 350.

† We may refer to p. 410 of the present volume for some further notice of these old night-guardians.

The whole cities of London, Westminster, and the borough of Southwark, covered by a cloud of smoke, most people being employed at lighting fires.'

From eight to nine.—'People in common trade and life, going out of town in stage-coaches to Edmonton, Stratford, Deptford, Acton, &c.; tradesmen who follow the amusement of angling, preparing to set out for Shepperton, Carshalton, Epping Forest, and other places of diversion; to pass away the two or three feast-days of the week. Servants to ladies of quality are washing and combing such lapdogs as are to go to church with their mistresses that morning.'

From nine to ten.—'Pupils belonging to surgeons going about their several wards, letting blood, mending broken bones, and doing whatever else they think necessary for their poor patients. Citizens who take a walk in the morning, with an intent to sleep away the afternoon, creeping to Sadler's Wells, or Newington, in order to get drunk during the time of divine service. French artificers quit their garrets, and exchange their greasy woollen caps and flannel shirts for swords and ruffles; and please themselves with a walk in St James's Park, the Temple, Somerset House gardens, Lincoln's Inn walks, or Gray's Inn; and then look sharp after an eleemosynary dinner at some dirty public-house. The new breakfasting-hut near Sadler's Wells, crowded with young fellows and their sweethearts, who are drinking tea and coffee, telling stories, repeating love-songs, and broken scraps of low comedy, till towards dinner-time. The great room at the "Horns," at Hornsey Wood, crowded with men, women, and children, eating rolls and butter, and drinking of tea, at an extravagant price.'

From ten till eleven.—'Crowds of old country fellows, women, and children, about the lord-mayor's coach and horses, at the south side of St Paul's Churchyard.* Much business done on the custom-house quays, Temple piazzas, and the porch of St Mary-le-Bow Church, in Cheapside, since the nave of St Paul's has been kept clear, by order of the bishop of London.† The churchyards about London, as Stepney, Pancras, Islington, &c., filled with people reading the tombstones, and eating currants and gooseberries. Actors and actresses meeting at their apartments to rehearse the parts they are to perform. Fine fans, rich brilliants, white hands, envious eyes, and enamelled snuff-boxes, displayed in most places of divine service, where people of fashion endure the intolerable fatigue with wonderful seeming patience.'

From eleven till twelve.—'Poor French people, about the Seven Dials and Spitalfields, picking dandelion in the adjacent fields, to make a salad for dinner. The organ-hunters running about from one parish church to another, to hear the best masters, as Mr Stanley, &c., play.‡ The wives of

genteel mechanics, under pretence of going to prayers in their apartment, take a nap and a dram, after which they chew lemon-peel to prevent being smelt. Ladies about St James's reading plays and romances, and making paint for their faces.'

From twelve till one.—'Idle apprentices, who have played under gateways during the time of divine service, begging the text of old women at the church-doors to carry home to their inquisitive masters and mistresses. Young tradesmen, half-starved gentlemen, merchants' clerks, petty officers in the customs, excise, and news-collectors, very noisy over their half-pints and dumplings in tavern-kitchens about Temple Bar and the Royal Exchange. Nosegay-women, flying-fruiterers, and black-shoe boys come again into business as the morning-service is over. The south side of the Royal Exchange, in Cornhill, very much crowded with gentlemen doing business and hearing news. The Mall, in St James's Park, filled with Frenchmen picking their teeth, and counting the trees for their dinner. All the common people's jaws in and about this great metropolis in full employment.'

From one till two.—'The friends of criminals under sentence of death in Newgate, presenting money to the turnkeys to get to the sight of them, in order to take their last farewell, and present them with white caps with black ribbons, prayer-books, nosegays, and oranges, that they may make a decent appearance up Holborn, on the road to the other world. Church bells and tavern bells keep time with each other. Men and boys who intend to swim in the River Lea near Hackney, the ponds near Hampstead, and the river Thames near Chelsea, this afternoon, are setting out according to their appointments. Pickpockets take their stands at the avenues of public places, in hopes of making a good booty during the hurry of the afternoon.'

From two till three.—'Strollers, posture-masters, puppet-show men, fiddlers, tumblers, and toy-women, packing up their affairs, and preparing to set out for such fairs as Wandsworth, &c., which will, according to the custom of the nation, begin the next day. Pawnbrokers' wives dressing themselves in their customers' wearing-apparel, rings and watches, in order to make a gay appearance in the fields, when evening-service is over. Citizens who have pieces of gardens in the adjacent villages, walking to them with their wives and children, to drink tea, punch, or bottled-ale; after which they load themselves with flowers for bean-pots; and roots, salads, and other vegetables for their suppers. The paths of Kensington, Highgate, Hampstead, Islington, Stepney, and Newington, found to be much pleasanter than those of the gospel.'

From three till four.—'Tallow-chandlers who do business privately in back-cellars and upper-rooms to evade the king's duty, taking advantage of most people being at church, in the fields, or asleep, to make mould-candles, known by the name of "running the buck." A general jumble from one end of London to another of silks, cottons, printed linens, and calicoes. Merchants get into their counting-houses with bottles of wine, pipes and tobacco before them, studying schemes for the advancement of their several stocks, both in trade and the public funds.'

From four till five.—'Some hundreds of people, mostly women and children, walking backward

* The mayor at that time attended every Sunday morning-service at St Paul's.

† This is a very curious notice of a very old custom, that of making the nave the scene of gossip and business, which prevailed in the days of Elizabeth, to the disregard of common decency in a sacred edifice, and which appears to have been customary even to this late date.

‡ Mr Stanley was the famous blind organist of the Temple church, and a friend of Handel. There is a portrait and memoir of him in the *European Magazine* for 1784.

and forward on Westminster Bridge for the benefit of the air. Eel-pies most unmercifully devoured at Green's Ferry, Jeremy's Ferry, and Bromley Lock on the River Lea; and at Clay Hall, near Old Ford, at Bow. The office-keepers of the Theatres Royal, tracing the streets from the houses of noblemen, ladies, and the principal actors and actresses, to let them know what is to be performed the ensuing day. The cider-cellar, in Spring Gardens, crowded with people of all nations.'

From five till six.—People who have the convenience of flat leaded roofs on the tops of their houses, especially such as have prospects of the river Thames, drinking tea, beer, punch, and smoking tobacco there till the dusk of the evening. Well-dressed gentlemen, and ladies of quality, drove out of St James's Park, Lincoln's Inn

Gardens, and Gray's Inn Walks, by milliners, mantua-makers, sempstresses, stay-makers, clear-starchers, French barbers, dancing-masters, gentlemen's gentlemen, tailors' wives, conceited old maids, and butchers' daughters. Great numbers of footmen near the gate-entrance of Hyde Park, wrestling, cudgel-playing, and jumping; while others who have drunk more than their share are swearing, fighting, or sleeping, till their ladies return from the Ring.'

From six till seven,—‘Children in back-alleys and narrow passages very busy at their several doors, shelling pease and beans for supper; and making boats, as they call them, with bean-shells and deal-matches. New milk and biscuits plentifully attacked by old women, children, and fools, in St James’s Park, Lamb’s Conduit Fields, and

ST MONDAY IN THE DAYS OF HOGARTH.

St George's Fields, Southwark. Westminster Abbey crowded with people, who are admiring the monuments, and reading their inscriptions.'

From seven till eight.—Fishermen out with their boats on the river Thames, and throwing out their nets to catch under-sized fish, contrary to act of parliament. The drawers at Sadler's Wells, and the Prospect House, near Islington; Jenny's Whim at Chelsea; the Spring Gardens at Newington and Stepney; the Castle at Kentish Town; and the Angel at Upper Holloway; in full employment, each of them trying to cheat, not only the customers, but even the person who has the care of the bar; and every room in those houses filled with talk and smoke. The taverns about the Royal Exchange filled with merchants, underwriters, and principal tradesmen, who oftentimes do as much business on the Sunday evenings, as they do when they go upon the Exchange.

From eight to nine.—‘Black eyes and broken heads exhibited pretty plentifully in the public streets, about precedence. Great struggling at Paris-Garden stairs, and the Barge-House stairs in Southwark, to get into the boats that ply to and from Blackfriars and the Temple. Young highwaymen venturing out upon the road, to attack such coaches, chaises, and horsemen as they think are worth meddling with on their return to London.’

From nine till ten.—‘Masters of private mechanic families reading to them chapters from *The Whole Duty of Man* before they go to bed. The streets hardly wide enough for numbers of people, who about this time are reeling to their habitations. Great hollowing and whooping in the fields, by such persons as have spent the day abroad, and are now returning home half-drunk, and in danger of losing their company.’

From ten till eleven.—‘Link-boys who have

been asking charity all day, and have just money sufficient to buy a torch, taking their stands at Temple Bar, London Bridge, Lincoln's-Inn-Fields, Smithfield, the City Gates, and other public places, to light, knock down, and rob people. The gaming-tables at Charing Cross, Covent Garden, Holborn, and the Strand, begin to fill with men of desperate fortunes, bullies, fools, and gamblers.'

From eleven till twelve.—'People of quality leaving off gaming in order to go to supper. Night-houses begin to fill. One-third of the inhabitants of London fast asleep, and almost penniless. The watch-houses begin to fill with young fellows shut out of their apartments, who are proud of sitting in the constable's chair, holding the staff of authority, and sending out for liquor to treat the watchmen. Bell-ringers assembling at churches to usher in the 22d of June, the day of the king's accession.'

Such are a few of the items illustrative of past manners, afforded by a pamphlet characterised by Mr Sala as 'one of the minutest, the most graphic, the most pathetic pictures of London life a century since that has ever been written.' The author tells us that he chose Sunday for his descriptive day, in order that he might not be accused of any invidious choice: 'hardly can it be expected that the other six begin or end in a more exemplary manner.' To the third edition of 1764 is appended a picture of St Monday, that universal day of debauch among the working-classes (see the engraving on the preceding page). Here we see tradesmen of all denominations idling and drinking, while a busy landlady chalks up double scores. Each man is characterised by some emblem of his trade. To the left, a shoemaker and tailor are seated on a bench, the former threatening his ragged wife, who urges him home, with the strap; the tailor quietly learns a new song. The butcher, busy at cards, has his game deranged by a termagant wife, who proceeds to blows. The sturdy porter in front defies the staggering leather-cutter, who upsets the painter's colours; the painter, stupidly drunk on a bench behind, is still endeavouring to lift another glass. On the walls, 'King Charles's Golden Rules' are hung up with all the pretentious morality of low haunts; another paper, inscribed 'Pay to-day, I trust to-morrow,' is the most likely to be appealed to and enforced by the busy hostess.

We gather from this slight review of a curious work, that London hours were earlier, and London habits in some degree more natural, as regards rising and walking, than among ourselves; but we also see greater coarseness of manners, and insecurity of life and property. Altogether, we may congratulate ourselves on the changes that a century has produced, and leave to unreasoning sentimentalists the office of bewailing the 'good old times.'

DECEMBER 27.

St John, apostle and evangelist. St Theodoros Grapt, confessor, 9th century.

St John the Evangelist's Day.

A special reverence and interest is attached to St John—'the disciple whom Jesus loved.' Through a misapprehension of the Saviour's words, a belief,

we are informed, came to be entertained among the other apostles that this disciple should never die, and the notion was doubtless fostered by the circumstance, that John outlived all his brethren and coadjutors in the Christian ministry, and was indeed the only apostle who died a natural death. He expired peacefully at Ephesus, it is stated, at the advanced age of ninety-four, in the reign of the Emperor Trajan, and the year of our Lord 100; thus, as Brady observes, 'making the first century of the Christian Era and the Apostolical Age, terminate together.'

Though John thus escaped actual martyrdom, he was, nevertheless, called upon to endure great persecution in the cause of his Friend and Master. Various fathers of the church, among others Tertullian and St Jerome, relate that in the reign of Domitian, the Evangelist, having been accused of attempting to subvert the religion of the Roman Empire, was transported from Asia to Rome, and there, in presence of the emperor and senate, before the gate called *Porta Latina*, or the Latin Gate, he was cast into a caldron of boiling oil, which he not only remained in for a long time uninjured, but ultimately emerged from, with renovated health and vigour. In commemoration of this event, the Roman Catholic Church retains in its calendar, on the 6th of May, a festival entitled 'St John before the Latin Gate.' Domitian, we are further informed, notwithstanding this miraculous interposition, continued obdurate, and banished St John to Patmos, a lonely island in the Grecian Archipelago, where he was employed in working among the criminals in the mines. In this dreary abode, the apostle, as he informs us himself, witnessed those sublime and wondrous visions, which he has recorded in the Apocalypse.

On the assassination of Domitian, and the elevation of Nerva to the imperial throne, John was released from his confinement at Patmos, and returned to Ephesus, where he continued till his death. A tradition obtains, that in his last days, when unable to walk to church, he used to be carried thither, and exhorted the congregation in his own memorable words, 'Little children, love one another.' Partly in reference to the angelic and amiable disposition of St John, partly also, apparently, in allusion to the circumstance of his having been the youngest of the apostles, this evangelist is always represented as a young man, with a heavenly mien and beautiful features. He is very generally represented holding in his left hand an urn, from which a demoniacal figure is escaping. This device appears to bear reference to a legend which states that, a priest of Diana having denied the divine origin of the apostolic miracles, and challenged St John to drink a cup of poison which he had prepared, the Evangelist, to remove his scepticism, after having first made on the vessel the sign of the cross, emptied it to the last drop without receiving the least injury. The purging of the cup from all evil is typified in the flight from it of Satan, the father of mischief, as represented in the mediæval emblem. From this legend, a superstitious custom seems to have sprung of obtaining, on St John's Day, supplies of hallowed wine, which was both drunk and used in the manufacture of *manchetts* or little loaves; the individuals who partook of which were deemed secure from all danger of poison throughout the

ensuing year. The subjoined allusion to the practice occurs in Googe's translation of *Naoogeorgus*:

'Nexthe John the sonne of Zebedee hath his appoynted day,
Who once by cruell Tyrants' will, constrayned was they say
Strong poyson up to drinke; therefore the Papistes doe beleve
That whoso puts their trust in him, no poyson them can greeve :
The wine beside that halowed is in worship of his name,
The Priestes doe give the people that bring money for the same.
And after with the selfe same wine are little manchets made
Agaynst the boystrous Winter stormes, and sundrie such like trade.
The men upon this solemne day, do take this holy wine
To make them strong, so do the maydes to make them faire and fine.'

Born.—Jacques Bernoulli, mathematician, 1654, *Basle*; Dr Conyers Middleton, philosophical and controversial writer, 1683, *Hinderwell*, near *Whitby*; Pope Pius VI., 1717; Arthur Murphy, dramatist and miscellaneous writer, 1727, *Ireland*.

Died.—Pierre de Ronsard, poet, 1585, *St Cosme Priory*, near *Tours*; Thomas Cartwright, Puritan divine, 1603; Captain John Davis, navigator, killed near *Malacca*, 1605; Thomas Guy, founder of Guy's Hospital, 1724, *London*; Henry Home, Lord Kames, lawyer and metaphysician, 1782; Prince Lee Boo, of *Pelew*, 1784, *London*; John Wilkes, celebrated demagogue, 1797; Dr Hugh Blair, eminent divine, 1800, *Edinburgh*; Joanna Southcott, female enthusiast and prophet, 1814, *London*; Charles Lamb, poet and essayist, 1834, *Edmonton*; Rev. William Jay, eminent dissenting preacher, 1853, *Bath*; Josiah Conder, editor and miscellaneous writer, 1855.

THOMAS GUY, AND GUY'S HOSPITAL :

'BOOKSELLERS AND STATIONERS.'

There is one noble institution in the metropolis, *Guy's Hospital*, which renders a vast amount of good to the poor, without any appeal either to the national purse or to private benevolence. Or, more correctly, this is a type of many such institutions, thanks to the beneficence of certain donors. Once now and then, it is necessary to bring public opinion to bear upon these charities, to insure equitable management; but the charities themselves are noble.

Thomas Guy was the son of a coal-merchant and lighterman, at Horseleydown, and was born in 1645. He did not follow his father's trade, but was apprenticed to a bookseller, and became in time a freeman and liveryman of the Stationers' Company. He began business on his own account as a bookseller, in a shop at the corner of Cornhill and Lombard Street, pulled down some years ago when improvements were made in that neighbourhood. He made large profits, first by selling Bibles printed in Holland, and then as a contractor for printing Bibles for Oxford University. He next made much money in a way that may, at the present time, seem beneath the dignity of a city shopkeeper, but which in those days was deemed a matter of course; viz., by purchasing seamen's tickets. The government, instead of paying seamen their wages in cash,

paid them in bills or tickets due at a certain subsequent date; and as the men were too poor or too improvident to keep those documents until the dates named, they sold them at a discount to persons who had ready cash to spare. Mr Guy was one of those who, in this way, made a profit out of the seamen, owing to a bad system for which the government was responsible. About that time, too, sprung up the notorious scheme called the South-sea Company, which ultimately brought ruin and disgrace to many who had founded or fostered it. Guy did not entangle himself in the roguery of the company; but he bought shares when low, and had the prudence to sell out when they were high. By these various means he accumulated a very large fortune. Pennant deals with him rather severely (in his *History of London*) for the mode in which a great part of his fortune was made; but, taking into consideration the times in which he lived, his proceedings do not seem to call for much censure. When his fortune was made, he certainly did good with it. He granted annuities to many persons in impoverished circumstances; he made liberal benefactions to St Thomas's Hospital; he founded an almshouse at Tamworth, his mother's native town; he left a perpetual annuity of £400 to Christ's Hospital, to receive four children yearly nominated by his trustees; and he gave large sums for the discharge of poor debtors. The following anecdote of him may here be introduced: '[Guy] was a man of very humble appearance, and of a melancholy cast of countenance. One day, while pensively leaning over one of the bridges, he attracted the attention and commiseration of a bystander, who, apprehensive that he meditated self-destruction, could not refrain from addressing him with an earnest entreaty "not to let his misfortunes tempt him to commit any rash act;" then, placing in his hand a guinea, with the delicacy of genuine benevolence, he hastily withdrew. Guy, roused from his reverie, followed the stranger, and warmly expressed his gratitude; but assured him he was mistaken in supposing him to be either in distress of mind or of circumstances: making an earnest request to be favoured with the name of the good man, his intended benefactor. The address was given, and they parted. Some years after, Guy, observing the name of his friend in the bankrupt-list, hastened to his house; brought to his recollection their former interview; found, upon investigation, that no blame could be attached to him under his misfortunes; intimated his ability and full intention to serve him; entered into immediate arrangements with his creditors; and finally re-established him in a business which ever after prospered in his hands, and in the hands of his children's children, for many years, in Newgate Street.'

The great work for which Thomas Guy is remembered, is the hospital bearing his name, in the borough. In connection with the foundation of this building, a curious anecdote has been related, which, though now somewhat hackneyed, will still bear repetition. Guy had a maid-servant of strictly frugal habits, and who made his wishes her most careful study. So attentive was she to his orders on all occasions, that he resolved to make her his wife, and he accordingly informed her of his intention. The necessary preparations were made for the wedding; and among others many little

repairs were ordered, by Mr Guy, in and about his house. The latter included the laying down a new pavement opposite the street-door. It so happened that Sally, the bride-elect, observed a portion of the pavement, beyond the boundary of her master's house, which appeared to her to require mending, and of her own accord she gave orders to the workmen to have this job accomplished. Her directions were duly attended to in the absence of Mr Guy, who, on his return, perceived that the workmen had carried their labours beyond the limits which he had assigned. On inquiring the reason, he was informed that what had been done was 'by the mistress's orders.' Guy called the foolish Sally, and telling her that she had forgotten her position, added: 'If you take upon yourself to order matters contrary to my instructions before we are married, what will you not do after? I therefore renounce my matrimonial intentions towards you.' Poor Sally, by thus assuming an authority to which she then had no claim, lost a rich husband, and the country gained the noble hospital; named after its founder, who built and endowed it at a cost of £238,292.* Guy was seventy-six years of age when he matured the plan for founding an hospital. He procured a large piece of ground on a lease of 999 years, at a rent of £30 per annum, and pulled down a number of poor dwellings which occupied the site. He laid the first stone of his new hospital in 1722, but did not live to witness the completion of the work; for he died on the 27th of December 1724—just ten days before the admission of the first sixty patients. His trustees procured an act of parliament for carrying out the provisions of his bequest. They leased more ground, and enlarged the area of the hospital to nearly six acres; while the endowment or maintenance fund was laid out in the purchase of estates in Essex, Herefordshire, and Lincolnshire.

The building itself is large and convenient, but not striking as an architectural pile. This has indeed been a lucky hospital; for, nearly a century after Guy's death, an enormous bequest of nearly £200,000 was added to its funds. Mr Hunt, in 1829, left this sum, expressly to enlarge the hospital to the extent of one hundred additional beds. The rental of the hospital estates now exceeds £30,000 per annum. In the open quadrangle of the hospital is a bronze statue of Guy by Scheemakers; and in the chapel, a marble statue of him by Bacon.

In connection with Thomas Guy, who, of all the members of the Stationers' Company of London, may certainly be pronounced to have been one of the most successful in the acquisition of wealth, an interesting circumstance regarding the original import of the term *stationer* calls here for notice. Up to about the commencement of the last century, the term in question served almost exclusively to denote a bookseller, or one who had a *station* or *stall* in some public place for the sale of books. An instance of this application of it occurs in the following passage in Fuller's *Worthies of England*: 'I will not add that I have passed my promise (and that is an honest man's bond) to my former *stationer*, that I will write nothing for the future, which was in my former books so considerable as

may make them interfere one with another to his prejudice.'

The annexed engraving exhibits a stationer's stall or bookseller's shop in ancient times, when books were generally exposed for sale in some public place in the manner here represented. A

A STATIONER'S STALL, OR BOOKSHOP IN THE OLDEN TIME.

parallel to this mode of conducting business still exists in the book-fairs at Leipsic and Frankfort, in Germany. In medieval days, the *stationarius* or *stationer* was an official connected with a university, who sold at his stall or *station* the books written or copied by the *librarius* or book-writer. From this origin is derived the modern term *stationer*, which now serves exclusively to denote an individual whose occupation consists in supplying the *implements* instead of the *productions* of literary labour.

JOANNA SOUTHCOTT.

Joanna Southcott was born about the year 1750, of parents in very humble life. When about forty years old, she assumed the pretensions of a prophetess, and declared herself to be the woman mentioned in the twelfth chapter of the Book of Revelation. She asserted that, having received a divine appointment to be the mother of the Messiah, the visions revealed to St John would speedily be fulfilled by her agency and that of the son, who was to be miraculously born of her. Although extremely illiterate, she scribbled much mystic and unintelligible nonsense as visions and prophecy, and for a time carried on a lucrative trade in the sale of seals, which were, under certain conditions, to secure the salvation of the purchasers. The imposture was strengthened by her becoming subject to a rather rare disorder, which gave her the

* Lawson's History of Banking.

appearance of pregnancy after she had passed her grand climacteric. The faith of her followers now rose to enthusiasm. They purchased, at a fashionable upholsterer's, a cradle of most expensive materials, and highly decorated, and made costly preparations to hail the birth of the miraculous babe with joyous acclamation. The delusion spread rapidly and extensively, especially in the vicinity of London, and the number of converts is said to have amounted to upwards of one hundred thousand. Most of them were of the humbler order, and remarkable for their ignorance and credulity; but a few were of the more educated classes, among whom were two or three clergymen. One of the clergymen, on being reproved by his diocesan, offered to resign his living if 'the holy Johanna,' as he styled her, failed to appear on a certain day with the expected Messiah in her arms. About the close of 1814, however, the prophetess herself began to have misgivings, and in one of her lucid intervals, she declared that 'if she had been deceived, she had herself been the sport of some spirit either good or evil.' On the 27th of December in that year, death put an end to her expectations—but not to those of her disciples. They would not believe that she was really dead. Her body was kept unburied till the most active signs of decomposition appeared; it was also subjected to a *post-mortem* examination, and the cause of her peculiar appearance fully accounted for on medical principles. Still, numbers of her followers refused to believe she was dead; others flattered themselves that she would speedily rise again, and bound themselves by a vow not to shave their beards till her resurrection. It is scarcely necessary to state, that most of them have passed to their graves unshorn. A few are still living, and within the last few years several families of her disciples were residing together near Chatham, in Kent, remarkable for the length of their beards, and the general singularity of their manners and appearance. Joanna Southcott was interred, under a fictitious name, in the burial-ground attached to the chapel in St John's Wood, London. 'A stone has since been erected to her memory, which, after reciting her age and other usual particulars, concludes with some lines, evidently the composition of a still unshaken believer, the fervour of whose faith far exceeds his inspiration as a poet.'

CHARLES AND MARY LAMB.

The lives of literary men are seldom characterised by much stirring adventure or variety of incident. The interest attaching to them consists mainly of the associations with which they are intertwined—the joys, trials, and sorrows of their domestic history, and the tracing of the gradual development of their genius to its culminating-point, from its first unfledged essays. In contemplating their career, much benefit may be derived both by the philosopher and moralist—the former of whom will gain thereby a deeper and more thorough knowledge of the workings of human nature, and the latter reap many an instructive and improving lesson.

Few biographies display so much beauty, or are more marked by a touching and lively interest, than those of Charles Lamb and his sister Mary. Devotedly attached to each other, united together

by a strong sympathy both in mental and physical temperament, and a highly-refined and cultivated literary taste, they passed from youth to age; and when first the brother, and afterwards the sister, were laid in the same grave, in the peaceful churchyard of Edmonton, it might truly be said of them, that they 'were lovely and pleasant in their lives, and in their death they were not divided.' We shall now present the reader with a brief sketch of their history.

Their father, John Lamb, was a clerk to Mr Salt, a bencher of the Inner Temple; and in Crown Office Row of this classic locality, Charles was born in February 1775. His sister Mary was ten years older than himself, and there was also an elder brother, John. Young Lamb's early associations were thus all of a quaint and antiquarian nature. The grand old Temple church, so impressive, both from its architectural beauty and the romantic interest attached to its former possessors, the Knights Templars, who repose in its precincts; the dim walks and passages of the inns-of-court, redolent alike of learning and jurisprudence; and the pleasant sunny gardens descending to the noble Thames, where King Edward of yore had mustered a gallant array of knighthood and men-at-arms, ere setting forth on his last expedition to Scotland—all combined to stamp their impress on the mind of a sensitive, affectionate, and poetic child. At the age of seven, he obtained a presentation to Christ's Hospital, where the ensuing seven years of his life were spent, and a lasting friendship formed with the poet Coleridge, then a student at the same institution. Lamb made here considerable progress in classical learning; but an impediment of speech, which clung to him through life, prevented him, as originally intended, from entering the church, a profession indeed to which his inclinations were not adapted; and he accordingly quitted school at fourteen, and was placed for a time in the South-sea House, where his brother John held a situation. From this he was, in a year or two, transferred to a clerkship in the East India House, an establishment in which he gradually rose to the enjoyment of a large salary; and was ultimately pensioned off on a handsome allowance, a few years previous to his death. Shortly after entering on this employment, his parents removed from the Temple to Little Queen Street, Holborn. The pecuniary resources of the family were at this time but scanty, consisting of Charles's then small salary from the East India House, an annuity enjoyed by his father from the liberality of his old master, Mr Salt, and the scanty returns which his sister Mary could procure by her industry with the needle. Old Mr Lamb was now sinking into dotage, and his wife was stricken by an infirmity which deprived her of the use of her limbs. An old maiden-aunt, whom Charles has affectionately commemorated, resided with them, and paid them a small board. Notwithstanding all the difficulties with which they had to struggle, the affection which bound the different members of the family together, and, more especially, Mary and Charles, secured their enjoyment of a large share of happiness; but a fearful misfortune was about to overtake them.

A predisposition to insanity seems to have been inherited by the Lambs. At the age of twenty, Charles was seized by a fit of this malady, which

compelled his removal, for a few weeks, to a lunatic asylum. His recovery, however, was complete and final; and till the end of his life his intellect remained sound and unclouded. A sadly different fate was that of poor Mary, his sister. Worn out by her double exertions in sewing and watching over her mother, who required constant attention, her mind which, on previous occasions, had been subject to aberration, gave way, and burst into an ungovernable frenzy. One day after the cloth had been laid for dinner, the malady attacked her with such violence, that, in a transport she snatched up a knife, and plunged it into the breast of her mother, who was seated, an invalid, in a chair. Her father was also present, but unable from frailty to interpose any obstacle to her fury; and she continued to brandish the fatal weapon, with loud shrieks, till her brother Charles entered the room, and took it from her hand. Assistance was procured, and the unfortunate woman was conveyed to a madhouse, where, in the course of a few weeks, she recovered her reason. In the meantime, her mother was dead, slain, though in innocence, by her hand; her father and aunt were helpless; and her brother John disposed to concur with the parish authorities and others in detaining her for life in confinement. In this conjuncture, Charles stepped forward, and by pledging himself to undertake the future care of his sister, succeeded in obtaining her release. Nobly did he fulfil his engagement by the sedulous and unremitting care with which he continued ever afterwards to watch over her, abandoning all hopes of marriage to devote himself to the charge which he had undertaken. It was a charge, indeed, sufficiently onerous, as Miss Lamb's complaint was constantly recurring after intervals, necessitating her removal for a time to an asylum. It was a remarkable circumstance connected with her disease, that she was perfectly conscious of its approach, and would inform her brother, with as much gentleness as possible, of the fact, upon which he would ask leave of absence from the India House, as if for a day's pleasuring, and accompany his sister on her melancholy journey to the place of confinement. On one of these occasions, they were met crossing a meadow near Hoxton by a friend, who stopped to speak to them, and learned from the weeping brother and sister their destination. In setting forth on the excursions which at first they used to make annually, during Lamb's holidays, to some place in the country, Mary would always carefully pack up in her trunk a strait-waistcoat, to be used in the event of one of her attacks coming on. Latterly, these jaunts had to be abandoned, as they were found to exercise on her an injurious influence.

The attendance required from Lamb at the India House was from ten to four every day, leaving him in general the free enjoyment of his evenings. These were devoted to literary labours and studies, diversified not unfrequently by social meetings with his friends, of whom his gentle and amiable nature had endeared to him an extensive circle. On Wednesday evenings, he usually held a reception, at which the principal literary celebrities of the day would assemble, play at whist, and discuss all matters of interest relating to literature, the fine arts, and the drama. Among those present on these occasions, in Lamb's younger days, might be seen Godwin, Hunt, and Hazlitt, and when in town,

Wordsworth, Southey, and Coleridge. At a later period, Allan Cunningham, Cary, Edward Irving, and Thomas Hood would be found among the guests. Shortly after Miss Lamb's first release from confinement, her brother and she removed from Holborn to Pentonville, where, however, they did not remain long, and in 1800 took up their abode in the Temple, in which locality, dear to the hearts of both of them from early associations, they resided about seventeen years, probably the happiest period of their existence. From the Temple, they removed to Russell Street, Covent Garden, and thence to Colebrook Cottage, Islington, on the banks of the New River, where, rather curious to say, Lamb, for the first time in his life, found himself raised to the dignity of a householder, having hitherto resided always in lodgings. Not long, too, after his settling in this place, he exchanged the daily drudgery of the desk for the independent life of a gentleman at large, having been allowed to retire from the India House on a comfortable pension. In a few years, however, his sister's increasing infirmities, and the more frequent recurrence of her mental disorder, induced him to quit London for the country, and he took up his abode at Enfield, from which he afterwards migrated to Edmonton. Here, in consequence of the effects of a fall, producing erysipelas in the head, he expired tranquilly and without pain, after a few days' illness, in December 1834. His sister was labouring at the time under one of her attacks, and was therefore unable to feel her loss with all the poignancy which she would otherwise have experienced. She survived her brother for upwards of twelve years, and having been latterly induced by her friends to remove from Enfield to London, died quietly at St John's Wood on 20th May 1847.

It is now proper to refer to Lamb's literary works. Being independent of the pen as a main support, his writings are more in the character of fugitive pieces, contributed to magazines, than of weighty and voluminous lucubrations. As an author, his name will principally be recollected by his celebrated *Essays of Elia*, originally contributed to the *London Magazine*, and a second series, even superior to the first, entitled the *Last Essays of Elia*. These delightful productions, so racy and original, place Lamb incontestably in the first rank of our British essayists, and fairly entitle him to contest the palm with Addison and Steele. Egotistical they may in one sense be termed, as the author's personal feelings and predilections, with many of his peculiar traits of character, are brought prominently forward; but the egotism is of the most charming and unselfish kind—a sentiment which commends itself all the more winningly to us when he comes to speak of his sister under the appellation of his Cousin Bridget. Other essays and pieces were contributed by him to various periodicals, including Leigh Hunt's *Reflector*, *Blackwood's Magazine*, and the *Englishman's Magazine*, and bear all the same character of quaintness, simplicity, and playful wit. In his early days, his tendencies had been principally exerted in the direction of poetry, in the production of which there was a sort of copartnership betwixt him and Coleridge, along with Charles Lloyd, and a volume of pieces by the trio was published at Bristol in 1797. As a votary of the Muses, however, Lamb's claims cannot be highly rated, his poems, though graceful and melodious,

being deficient both in vigour and originality of thought. The one dramatic piece, the farce of *Mr H.*, which he succeeded in getting presented on the boards of Drury Lane, was shelved on the first night of its representation. The disappointment was borne manfully by him, and as he sat with his sister in the pit, Lamb joined himself in the hisses by which the fate of his unfortunate bantling was sealed.

Allusion has already been made to Lamb's amiability of disposition. Through the whole course of his life he never made a single enemy, and the relations between him and his friends were scarcely ever disturbed by the slightest *fracas*. To use a favourite expression of Lord Jeffrey, he was eminently 'sweet-blooded.'

Though of a highly poetic and imaginative temperament, Lamb took little pleasure in rural scenery. A true child of London, no landscape, in his estimation, was comparable with the crowded and bustling streets of the great metropolis, Covent-Garden Market and its piazzas, or the gardens of the inns of court. A visit to Drury Lane or Covent-Garden Theatre in the evening, a rubber at whist, or a quiet fireside-chat with a few friends, not unaccompanied by the material consolations of sundry steaming beverages and the fragrant fumes of the Virginian weed, were among his dearest delights. One unfortunate failing must here be recorded—his tendency, on convivial occasions, to exceed the limits of temperance. This, however, can scarcely be regarded as a habitual error on his part, and has probably received a greater prominence than it merited, from his well-known paper, *The Confessions of a Drunkard*, in which he has so graphically described the miserable results of excess. Another predilection, his addiction to the use of tobacco, was ultimately overcome by him after many struggles. His tastes, in the consumption of the fragrant weed, were not very delicate, inducing him to use the strongest and coarsest kinds. On being asked one day by a friend, as he was puffing forth huge volumes of smoke, how he had ever managed to acquire such a practice, he replied: 'By striving after it as other men strive after virtue.' His convivial habits leading him not unfrequently to 'hear the chimes at midnight,' his appearance at business next morning was sometimes considerably beyond the proper hour. On being one day reproved by his superior for his remissness in this respect, the answer was: 'True, sir, very true, I often come *late*, but then, you know, I always go away *early*.' To a man of his disposition, it can be readily supposed that the dull routine of his duties at the India House was a most distasteful drudgery, and he accordingly find him often bewailing humorously his lot in letters to his correspondents. His good sense, however, rendered him perfectly aware of the benefits of regular employment and a fixed income, and his complaints must therefore be regarded in a great measure as ironical, the offspring of the spirit of grumbling, so characteristic of the family of John Bull.

During the intervals of her malady, Miss Lamb appeared in her natural and attractive aspect, the well-bred mistress of her brother's house, doing its honours with all grace, and most tenderly solicitous and careful in everything relating to his comfort. Her conversation and correspondence were both lively and genial, and possessing the same literary

tastes as Charles, she was often associated with him in the production of various works. These were chiefly of a juvenile nature, including the charming collection of *Tales from Shakspeare*; *Mrs Leicester's School*; and *Poetry for Children*.

DECEMBER 28.

The Holy Innocents. St Theodorus, abbot of Tabenna, confessor, 367..

Innocents' Day.

This festival, which is variously styled Innocents' Day, The Holy Innocents' Day, and Childermas Day, or Childermas, has been observed from an early period in the history of the church, as a commemoration of the barbarous massacre of children in Bethlehem, ordered by King Herod, with the view of destroying among them the infant Saviour, as recorded in the Gospel of St Matthew. It is one of those anniversaries which were retained in the ritual of the English Church at the Reformation.

In consequence probably of the feeling of horror attached to such an act of atrocity, Innocents' Day used to be reckoned about the most unlucky throughout the year, and in former times, no one who could possibly avoid it, began any work, or entered on any undertaking, on this anniversary. To marry on Childermas Day was especially inauspicious. It is said of the equally superstitious and unprincipled monarch, Louis XI., that he would never perform any business, or enter into any discussion about his affairs on this day, and to make to him then any proposal of the kind, was certain to exasperate him to the utmost. We are informed, too, that in England, on the occasion of the coronation of King Edward IV., that solemnity, which had been originally intended to take place on a Sunday, was postponed till the Monday, owing to the former day being in that year the festival of Childermas. This idea of the inauspicious nature of the day was long prevalent, and is even yet not wholly extinct. To the present hour we understand the housewives in Cornwall, and probably also in other parts of the country, refrain scrupulously from scouring or scrubbing on Innocents' Day.

In ancient times, the 'Massacre of the Innocents' might be said to be annually re-enacted in the form of a smart whipping, which it was customary on this occasion to administer to the juvenile members of a family. We find it remarked by an old writer, that 'it hath been a custom, and yet is elsewhere, to whip up the children upon Innocents' Day Morning, that the memorie of Herod's murder of the Innocents might stick the closer, and in a moderate proportion to act over the crueltie again in kinde.' Several other ancient authors confirm the accuracy of this statement. The idea is naturally suggested that these unfortunate 'innocents' might have escaped so disagreeable a commemoration by quitting their couches betimes, before their elders had risen, and we accordingly find that in some places the whole affair resolved itself into a frolic, in which the lively and active, who managed to be first astir, made sport to themselves at the expense of the lazy and sleepy-headed, whom

it was their privilege on this morning to rouse from grateful slumbers by a sound drubbing administered *in lecto*.

In reference to the three consecutive commemorations, on the 26th, 27th, and 28th of December, theologians inform us that in these are comprehended three descriptions of martyrdom, all of which have their peculiar efficacy, though differing in degree. In the death of St Stephen, an example is furnished of the highest class of martyrdom; that is to say, both in *will and deed*. St John the Evangelist, who gave practical evidence of his readiness to suffer death for the cause of Christ, though, through miraculous interposition, he was saved from actually doing so, is an instance of the second description of martyrdom—in *will* though not in *deed*. And the slaughter of the Innocents affords an instance of martyrdom in *deed* and not in *will*, these unfortunate children having lost their lives, though involuntarily, on account of the Saviour, and it being therefore considered 'that God supplied the defects of their will by his own acceptance of the sacrifice.'

Born.—Thomas Henderson, astronomer, 1798, *Dundee*; Alexander Keith Johnstone, geographer, 1804.

Died.—Mary of Orange, queen of William III., 1694, *Kensington*; Pierre Bayle, critic and controversialist, 1706, *Rotterdam*; Joseph Piton de Tournefort, distinguished botanist, 1708, *Paris*; Dr John Campbell, miscellaneous writer, 1775, *London*; John Logan, poet, 1788, *London*; Thomas Babington Macaulay, Lord Macaulay, historian, essayist, &c., 1859, *Kensington*.

JOHN LOGAN.

The name of John Logan, though almost entirely forgotten in South Britain, is not likely to pass into oblivion in Scotland, as long as the church of that country continues to use in her services those beautiful Scripture paraphrases and hymns, undoubtedly the finest and most poetical of any *versified* collection of chants for divine worship employed by any denomination of Christians in the United Kingdom. Some of the finest of these, including the singularly solemn and affecting hymn, 'The hour of my departure's come,' are from the pen of Logan.

The history of this gifted man forms one of those melancholy chapters which the lives of men of genius have but too often furnished. The son of a small farmer near Fala, in Mid-Lothian, he was educated for the Scottish Church in the Edinburgh University, and almost immediately after being licensed as a preacher, was presented to a church in Leith, where for several years he enjoyed great renown as an eloquent and popular preacher. He delivered a course of lectures in Edinburgh with much success on the 'Philosophy of History,' published a volume of poems, and had a tragedy called *Runnamede* acted at the Edinburgh theatre in 1783. The times were now somewhat changed since the days when the production of Home's tragedy of *Douglas* had excited a ferment in the Scottish Church, which has become historical. We are informed by Dr Carlyle, who himself had to encounter the violence of the storm which burst forth against Home and the clerical brethren who supported him, that about 1784, so complete a revulsion of feeling had taken place on the subject of theatricals, owing to

the predominance gained by the Moderate over the Evangelical party, that when Mrs Siddons made her first appearance in Edinburgh, the General Assembly of the Scottish Church was obliged to adjourn its sittings at an early hour to enable its reverend members to attend the theatre and witness the performance of the great tragic actress. Yet, notwithstanding this altered state of public opinion, Logan did undergo some obloquy and animadversion in consequence of the play above referred to, and the annoyance thereby occasioned, combined with a hereditary tendency to hypochondria, seems to have induced a melancholy and depression of spirits which prompted him to seek relief in the fatal solace of stimulating liquors. The habit rapidly gained strength; and having so far forgotten himself as on one occasion to appear in the pulpit in a state of intoxication, the misguided man was glad to make an arrangement with the ecclesiastical authorities, by which he was allowed to resign his ministerial charge, and retain for his maintenance a portion of its revenues. He then proceeded to London, where he eked out his income by literary labour of various kinds, but did not long survive his transference to the metropolis, dying there on 28th December 1788. Two posthumous volumes of his sermons long enjoyed great popularity.

Whilst yet a student at Edinburgh College, Logan acted for a time as tutor to a boy who afterwards became Sir John Sinclair of Ulbster, famous for his many public-spirited undertakings. The following anecdote of this period of his life exhibits an amusing instance of a tendency to practical joking in the disposition of the future divine and poet. About 1766, the Sinclair family, with whom he resided, made a progress from Edinburgh to its remote Caithness home; and owing to the badness of the roads, it was necessary to employ two carriages, the heaviest of them drawn by six horses. 'When the cavalcade reached Kinross, the natives gathered round in crowds to gaze upon it, and requested the tutor to inform them who was travelling in such state. Logan affected a suspicious reluctance to give an answer; but at last took aside some respectable bystander, and, after enjoining secrecy, whispered to him, pointing to the laird: "You observe a portly stout gentleman, with gold lace upon his clothes. That is (but it must not be mentioned to mortal) the great Duke William of Cumberland; he is going north *incog*. to see the field of Culloden once more." This news was, of course, soon spread, and brought the whole population to catch a glimpse of the hero.'*

The White Horse of Berkshire.

In a previous article,† we took occasion to describe the celebrated Berkshire monument known as 'Wayland Smith's Cave,' the history of which is shrouded in a mysterious antiquity. About a mile from this famous cromlech exists a no less remarkable memorial of bygone times—the renowned White Horse of Berkshire.

The colossal representation which bears this name, consists of a trench, about two feet deep,

* *Memoir of Sir John Sinclair, by his Son*. 2 vols. 1837
† Volume ii. p. 82.

cut in the side of a steep green hill, which is called White Horse Hill, and rises on the south of the vale known as the Vale of the White Horse. It is situated in the parish of Uffington, in the western district of Berkshire, about five miles from Great Farringdon. Though rudely cut, the figure, excavated in the chalk of which the hill is composed, presents, when viewed from the vale

THE WHITE HORSE OF BERKSHIRE.

beneath, a sufficiently recognisable delineation of a white horse in the act of galloping. Its length is about 374 feet, and the space which it occupies is said to be nearly two acres.

No exact evidence can be adduced regarding the origin of this remarkable figure, but there seems to be little doubt that, in accordance with the popular tradition, it was carved to commemorate the victory of King Ethelred and his brother Alfred, afterwards Alfred the Great, over the Danes at Ashdown, in the year 871. The actual site of this great battle is not known, and has been the subject of some discussion; but the balance of probability is in favour of its having been fought in the neighbourhood of White Horse Hill, on the summit of which, at the height of 893 feet above the sea, is an ancient encampment, consisting of a plain of more than eight acres in extent, surrounded by a rampart and ditch. This enclosure is called Uffington Castle, and immediately beneath it is the stupendous engraving of the White Horse.

Were the preservation of this curious monument dependent only on the persistency of the original figure, it would probably have long since been obliterated by the washing down of debris from above into the trench, and the gradual formation of turf. From time immemorial, however, a custom has existed among the inhabitants of the neighbouring district, of assembling periodically, and scouring or cleaning out the trench, so as to renew and preserve the figure of the horse. This ceremony is known as 'The Scouring of the White Horse,' and, according to an ancient custom, the scourers are entertained at the expense of the lord of the manor. The festival which concludes their labours, forms a fête of one or two days' duration. Rustic and athletic games of various kinds, including wrestling, backsword-play, racing, jumping, and all those pastimes included in the general category of 'old English sports,' are engaged in on this occasion with immense enthusiasm, and prizes are distributed to the most successful competitors. A most interesting and graphic description of one of these rural gatherings, which took place in Septem-

ber 1857, is given in *The Scouring of the White Horse*, from the spirited pen of Mr Hughes, the well-known author of *Tom Brown's School-days*.

CARD-PLAYING AND PLAYING-CARDS.

A universal Christmas custom of the olden time was playing at cards; persons who never touched a card at any other season of the year, felt bound to play a few games at Christmas. The practice had even the sanction of the law. A prohibitory statute of Henry VII.'s reign, forbade card-playing save during the Christmas holidays. Of course, this prohibition extended only to persons of humble rank; Henry's daughter, the Princess Margaret, played cards with her suitor, James IV. of Scotland; and James himself kept up the custom, receiving from his treasurer, at Melrose, on Christmas-night, 1496, thirty-five unicorns, eleven French crowns, a ducat, a *ridare*, and a *lew*, in all about equal to £42 of modern money, to use at the card-table. One of Poor Robin's rhythmical effusions runs thus:

'Christmas to hungry stomachs gives relief,
With mutton, pork, pies, pasties, and roast-beef;
And men, at cards, spend many idle hours,
At loadum, whisk, cross-ruff, put, and all-fours.'

Palamedes, it is said, invented the game of chess to assuage the bitter pangs of hunger, during the siege of Troy; and, similarly, Poor Robin, in another doggerel rhyme, seems to imply that a pair—an old name for a pack—of cards may even cheer a comfortless Christmas—

'The kitchen that a-cold may be,
For little fire you in it may see.
Perhaps a pair of cards is going,
And that's the chiefest matter doing.'

The immortal Sir Roger de Coverley, however, took care to provide both creature-comfort and amusement for his neighbours at Christmas; by sending 'a string of hog's puddings and a pack of cards' to every poor family in the parish.

Primerò was the fashionable game at the court of England during the Tudor dynasty. Shakspeare represents Henry VIII. playing at it with the Duke of Suffolk; and Falstaff says: 'I never prospered, since I forswore myself at Primerò.' In the Earl of Northumberland's letters about the Gunpowder-plot, it is noticed that Joscelin Percy was playing at this game on Sunday, when his uncle, the conspirator, called on him at Essex House. In the Sidney papers, there is an account of a desperate quarrel between Lord Southampton, the patron of Shakspeare, and one Ambrose Willoughby. Lord Southampton was then 'Squire of the Body' to Queen Elizabeth, and the quarrel was occasioned by Willoughby persisting to play with Sir Walter Raleigh and another at Primerò, in the Presence Chamber, after the queen had retired to rest, a course of proceeding which Southampton would not permit. Primerò, originally a Spanish game, is said to have been made fashionable in England by Philip of Spain, after his marriage with Queen Mary. Rogers elegantly describes the fellow-voyagers of Columbus engaged at this game:

'At daybreak might the caravels be seen,
Chasing their shadows o'er the deep serene;
Their burnished prows lashed by the sparkling-tide,
Their green-cross standards waving far and wide.'

And now once more, to better thoughts inclined,
The seaman, mounting, clamoured in the wind.
The soldier told his tales of love and war;
The courtier sung—sung to his gay guitar.
Round at Primero, sate a whiskered band;
So fortune smiled, careless of sea or land.'

Maw succeeded Primero as the fashionable game at the English court. Sir John Harrington notices it as—

'Maw,
A game without civility or law;
An odious play, and yet in court oft seen,
A saucy Knave to trump both King and Queen.'

Maw was the favourite game of James I., who appears to have played at cards, just as he played with affairs of state, in an indolent manner; requiring in both cases some one to hold his cards, if not to prompt him what to play. Weldon, alluding to the poisoning of Sir Thomas Overbury, in his *Court and Character of King James*, says: 'The next that came on the stage was Sir Thomas Monson, but the night before he was to come to his trial, the king being at the game of Maw, said: "To-morrow comes Thomas Monson to his trial." "Yea," said the king's card-holder, "where if he do not play his master's prize, your majesty shall never trust me." This so ran in the king's mind, that at the next game, he said he was sleepy, and would play out that set the next night.' The writer of a contemporary pamphlet, entitled *Tom Tell-truth*, shews that he was well acquainted with James's mode of playing cards, and how, moreover, his majesty was tricked in his dawdling with state matters, where the friendly services of a card-holder were less to be depended on. This pamphleteer, addressing James, observes: 'Even in the very gaming ordinaries, where men have scarce leisure to say grace, yet they take a time to censure your majesty's actions, and that in their old-school terms. They say you have lost the fairest game at Maw that ever king had, for want of making the best advantage of the five-finger, and playing the other helps in time. That your own card-holders play booty, and give the sign out of your own hand.' This gives us a suspicion of what the game of Maw was like, which is fully verified by the following verses under a caricature of the period, representing the kings of England, Denmark, and Sweden, with Bethlem Gabor, playing at cards against the pope and some monks.

'Denmark, not sitting far, and seeing what hand
Great Britain had, and how Rome's loss did stand,
Hopes to win something too: Maw is the game
At which he plays, and challengeth at the same
A Monk, who stakes a chalice; Denmark sets gold
And shuffles; the Monk cuts; Denmark being bold,
Deals freely round; and the first card he shews
Is the five-fingers, which, being turned up, goes
Cold to the Monk's heart; the next Denmark sees
Is the ace of hearts; the Monk cries out I lees!
Denmark replies, Sir Monk shew what you have;
The Monk could shew him nothing but the knave.'

From the preceding allusions to the five-fingers (the five of trumps), the ace of hearts, and the knave, it is evident that Maw differed very slightly from Five Cards, the most popular game in Ireland at the present day. As early as 1674, this game was popular in Ireland, as we learn from Cotton's *Compleat Gamester*, which says: 'Five Cards is an Irish game, and is much played in that kingdom,

for considerable sums of money, as All-fours is played in Kent, and Post-and-pair in the west of England.' Games migrate and acquire new names, as well as other things. Post-and-pair, formerly the great game of the west of England, has gone further west, and is now the Poker of the south-western states of America; and the American backwoodsman, when playing his favourite game of *Euker*, little thinks that he is engaged at the fashionable Parisian *Écarté*.

Noddy was one of the old English court games, and is thus noticed by Sir John Harrington:

'Now Noddy followed next, as well it might,
Although it should have gone before of right;
At which I say, I name not any body,
One never had the knave, yet laid for Noddy.'

This has been supposed to have been a children's game, and it was certainly nothing of the kind. Its nature is thus fully described in a curious satirical poem, entitled *Batt upon Batt*, published in 1694.

'Shew me a man can turn up Noddy still,
And deal himself three fives too, when he will;
Conclude with one-and-thirty, and a pair,
Never fail ten in Stock, and yet play fair,
If Batt be not that wight, I lose my aim.'

From these lines, there can be no doubt that the ancient Noddy was the modern Cribbage—the Nob of to-day, rejoicing in the name of Noddy, and the modern Crib, being termed the Stock. Cribbage is, in all probability, the most popular English game at cards at the present day. It seems as if redolent of English comfort, a snug fireside, a Welsh-rabbit, and a little mulled something simmering on the hob. The rival powers of chance and skill are so happily blended, that while the influence of fortune is recognised as a source of pleasing excitement, the game of Cribbage admits, at the same time, of such an exertion of the mental faculties, as is sufficient to interest without fatiguing the player. It is the only game, known to the writer, that still induces the village surgeon, the parish curate, and two other old-fashioned friends, to meet occasionally, on a winter's evening, at the village inn.

Ombre was most probably introduced into this country by Catherine of Portugal, the queen of Charles II.; Waller, the court-poet, has a poem on a card torn at Ombre by the queen. This royal lady also introduced to the English court the reprehensible practice of playing cards on Sunday. Pepys, in 1667, writes: 'This evening, going to the queen's side to see the ladies, I did find the queen, the Duchess of York, and another at cards, with the room full of ladies and great men; which I was amazed at to see on a Sunday, having not believed, but contrarily flatly denied the same, a little while since, to my cousin.'

In a passage from Evelyn's *Memoirs*, already quoted (vol. i. p. 226), the writer impressively describes another Sunday-evening scene at Whitehall, a few days before the death of Charles II., in which a profligate assemblage of courtiers is represented as deeply engaged in the game of Basset. This was an Italian game, brought by Cardinal Mazarin to France; Louis XIV. is said to have lost large sums at it; and it was most likely brought to England by some of the French ladies

of the court. It did not stand its ground, however, in this country; Ombre continuing the fashionable game in England, down till after the expiration of the first quarter of the last century. It is utterly forgotten now, but being Belinda's game in the *Rape of the Lock*, where every incident in the deal is minutely described, it could be at once revived from that delightful poem. Pope's Grotto and Hampton Court excited in Miss Mitford's mind 'vivid images of the fair Belinda and the game of Ombre.' The writer, who resides in that classic neighbourhood, sometimes sees at auctions in old houses, the company puzzling their brains over a curious three-cornered table, wondering what it possibly could have been made for. It is an Ombre-table, expressly used for playing this game, and is represented, with an exalted party so engaged, on the frontispiece of Seymour's *Compleat Gamester*, published in 1739. From the title-page we learn that this work was written 'for the use of the young princesses.' These were the daughters of George, Prince of Wales, afterwards George II. One of them, Amelia, in her old-maidenhood, was a regular visitor at Bath, seeking health in the pump-room, and amusement at the card-table.

Quadrille succeeded Ombre, but for a curious reason did not reign so long as its predecessor. From the peculiar nature of Quadrille, an unfair confederacy might be readily established, by any two persons, by which the other players could be cheated. In an annual publication, the *Annals of Gaming*, for 1775, the author says, 'this game is most commonly played by ladies, who favour one another by making signs. The great stroke the ladies attempt is keeping the pool, when by a very easy legerdmain they can serve themselves as many fish as they please.'

While the preceding games were in vogue, the magnificent temple of Whist, destined to outshine and overshadow them, was in course of erection.

'Let India vaunt her children's vast address,
Who first contrived the warlike sport of Chess;
Let nice Piquette the boast of France remain
And studious Ombre be the pride of Spain;
Invention's praise shall England yield to none,
When she can call delightful Whist her own.'

All great inventions and discoveries are works of time, and Whist is no exception to the rule; it did not come into the world perfect at all points, as Minerva emerged from the head of Jupiter. Nor were its wonderful merits early recognised. Under the vulgar appellations of Whisk and Swobbers, it long lingered in the servants-hall, ere it could ascend to the drawing-room. At length, some gentlemen, who met at the Crown coffee-house, in Bedford Row, studied the game, gave it rules, established its principles, and then Edward Hoyle, in 1743, blazoned forth its fame to all the world.

'Whilst Ombre and Quadrille at court were used,
And Basset's power the city dames amused,
Imperial Whist was yet but light esteemed,
And pastime fit for none but rustics deemed.
How slow, at first, is still the growth of fame!
And what obstructions wait each rising name!
Our stupid fathers thus neglected, long,
The glorious boast of Milton's epic song;
But Milton's muse, at last, a critic found,
Who spread his praise o'er all the world around;
And Hoyle, at length, for Whist performed the same,
And proved its right to universal fame.'

780

Many attempts have been made, at various times, to turn playing-cards to a very different use from that for which they were originally intended. Thus, in 1518, a learned Franciscan friar, named Murner, published a *Logica Memorativa*, a mode of teaching logic, by a pack of cards; and, subsequently, he attempted to teach a summary of civil law in the same manner. In 1656, an Englishman, named Jackson, published a work, entitled the *Scholar's Scintial Cards*, in which he proposed to teach reading, spelling, grammar, writing, and arithmetic, with various arts and sciences, by playing-cards; premising that the learner was well grounded in all the games played at the period. And later still, about the close of the seventeenth century, there was published the *Gentle Housekeeper's Pastime; or the Mode of Carving at Table represented in a Pack of Playing-Cards, by which any one of Ordinary Capacity may learn how to Carve, in Mode, all the most usual Dishes of Flesh, Fish, Fowl, and Baked Meats, with the several Sauces and Garnishes proper to Every Dish of Meat*. In this system, flesh was represented by hearts, fish by clubs, fowl by diamonds, and baked-meat by spades. The king of hearts ruled a noble sirloin of roast-beef; the monarch of clubs presided over a pickled herring; and the king of diamonds reared his battle-axe over a turkey; while his brother of spades smiled benignantly on a well-baked venison-pasty.

A still more practical use of playing-cards can be vouched for by the writer. Some years ago, a shrewd Yankee skipper, bound for New York, found himself contending against the long westerly gales of winter with a short and inefficient crew, but a number of sturdy Irish emigrants as passengers. It was most desirable to make the latter useful in working the ship, by pulling and hauling about the deck; but their utter ignorance of the names and positions of the various ropes rendered the project, at first sight, apparently impossible. The problem, however, was readily solved by placing a playing-card, as a mark or tally, at each of the principal ropes; the red cards in the fore-part of the ship, the black cards in the after; hearts and clubs on the starboard-side, spades and diamonds on the larboard. In five minutes, every Irishman knew his station, and the position of the cards; there was no mysterious nautical nomenclature of tacks, sheets, halliards, braces, bowlines, &c., to bother the Hibernian mind. The men who were stationed at the ace of spades, for instance, well knew their post, and when called to tack ship, were always found at it; when orders were given to haul down the king of clubs, the rope was at once seized by ready hands. The writer has seen the after-guard and waiters of a newly-commissioned crack ship-of-war, longer in learning their stations, and becoming efficient in their duties, than those card-taught Irishmen were.

Even the pulpit has not disdained to turn playing-cards to practical use. Bishop Latimer, preaching at Cambridge on the Sunday before Christmas, 1527, suited his sermon to the card-playing practice of the season rather than the text. And Fuller gives another example of a clergyman preaching from Romans xii. 3—'As God hath dealt to every man the measure of faith.' The reverend gentleman in question adopted as an illustration of his discourse the metaphor of *dealing* as applied

to cards, reminding his congregation that they should follow suit, ever play above-board, improve the gifts dealt out to them, take care of their trumps, play promptly when it became their turn, and so forth.

The familiar name of the nine of diamonds has already been noticed in these pages (vol. i. p. 75). In Ireland, the six of hearts is still termed 'Grace's card.' The Honourable Colonel Richard Grace, an old Cavalier, when governor of Athlone for James II., was solicited, by promises of royal favour, to betray his trust, and espouse the cause of William III. Taking up a card, which happened to be the six of hearts, Grace wrote upon it the following reply, and handed it to the emissary who had been commissioned to make the proposal. 'Tell your master I despise his offer, and that honour and conscience are dearer to a gentleman, than all the wealth and titles a prince can bestow.'

Short notes were frequently written on the back of playing-cards. In an old collection of poetry is found the following lines:

TO A LADY, WHO SENT HER COMPLIMENTS TO A
CLERGYMAN ON THE TEN OF HEARTS.

'Your compliments, dear lady, pray forbear,
Old English services are more sincere;
You send ten hearts—the tithe is only mine,
Give me but one, and burn the other nine.'

The kind of advertisements, now called circulars, were often, formerly, printed on the backs of playing-cards. Visiting-cards, too, were improvised, by writing the name on the back of playing-cards. About twenty years ago, when a house in Dean Street, Soho, was under repair, several visiting-cards of this description were found behind a marble chimney-piece, one of them bearing the name of Isaac Newton. Cards of invitation were written in a similar manner. In the fourth picture, in Hogarth's series of 'Marriage-à-la-Mode,' several are seen lying on the floor, upon one of which is inscribed: 'Count Basset begs to no how Lade Squander sleapt last nite.' Hogarth, when he painted this inscription, was most probably thinking of Mrs Centlivre's play, *The Basset Table*, which a critic describes as containing a great deal of plot and business, without much sentiment or delicacy.

An animated description of a round game at cards, among a party of young people in a Scottish farmhouse, is given in Wilson's ever-memorable *Noctes*. It is the Shepherd who is represented speaking in this wise:

'As for young folks—lads and lasses, like—when the gudeman and his wife are gaen to bed, what's the harm in a ggem at cairds? It's a chearf', noisy, sicht o' comfort and confusion. Sic luckin' into anither's hauns! Sic fause shufflin'! Sic unfair dealin'! Sic winkin' to tell your partner that ye hae the king or the ace! And when that wunna do, sic kickin' o' shins and treadin' on taes aneath the table—after the wrang anes! Then down wi' your haun' o' cairds in a clash on the boord, because you've ane ower few, and the coof maun lose his deal! Then what gigglin' among the lasses! What amicable, nay, love-quarrels, between partners! Jokin', and jeestin', and tauntin', and toozlin'—the cawnel blawn out, and the soun' o' a thousan' kisses!—That's caird-playing in the kintra, Mr North; and where's the man

amang ye that wull daur to say that it's no a pleasant pastime o' a winter's nicht, when the snaw is cumin' doon the lum, or the speat's roarin' amang the mirk mountains.'

A curious and undoubtedly authentic historical anecdote is told of a pack of cards. Towards the end of the persecuting reign of Queen Mary, a commission was granted to a Dr Cole to go over to Ireland, and commence a fiery crusade against the Protestants of that country. On coming to Chester, on his way, the doctor was waited on by the mayor, to whom he shewed his commission, exclaiming, with premature triumph: 'Here is what shall lash the heretics of Ireland.' Mrs Edmonds, the landlady of the inn, having a brother in Dublin, was much disturbed by overhearing these words; so, when the doctor accompanied the mayor down stairs, she hastened into his room, opened his box, took out the commission, and put a pack of cards in its place. When the doctor returned to his apartment, he put the box into his portmanteau without suspicion, and the next morning sailed for Dublin. On his arrival, he waited on the lord-lieutenant and privy council, to whom he made a speech on the subject of his mission, and then presented the box to his lordship; but on opening it, there appeared only a pack of cards, with the knave of clubs uppermost. The doctor was petrified, and assured the council that he had had a commission, but what was become of it he could not tell. The lord-lieutenant answered: 'Let us have another commission, and, in the meanwhile, we can shuffle the cards.' Before the doctor could get his commission renewed, Queen Mary died, and thus the persecution was prevented. We are further informed that, when Queen Elizabeth was made acquainted with the circumstances, she settled a pension of £40 per annum on Mrs Edmonds, for having saved her Protestant subjects in Ireland.

There are few who sit down to a quiet rubber that are aware of the possible combinations of the pack of fifty-two cards. As a curious fact, not found in Hoyle, it is worth recording here, that the possible combinations of a pack of cards cannot be numerically represented by less than forty-seven figures, arrayed in the following order: 16, 250, 563, 659, 176, 029, 962, 568, 164, 794, 000, 749, 006, 367, 006, 400.

An old work on card-playing sums up the morality of the practice, very concisely, in the following lines:

'He who hopes at cards to win,
Must never think that cheating's sin;
To make a trick whene'er he can,
No matter how, should be the plan.
No case of conscience must he make,
Except how he may save his stake;
The only object of his prayers
Not to be caught and kicked down stairs.'

A more summary process of ejection, even, than kicking down stairs, seems to have been occasionally adopted in the olden time; sharpers having sometimes been thrown out of a window. A person so served at Bath, it is said, went to a solicitor for advice, when the following conversation took place:

'Says the lawyer: "What motive for treatment so hard?"
'Dear sir, all my crime was but—slipping a card.'

"Indeed! For how much did you play then, and where!"

"For two hundred, up two pair of stairs at the Bear."

"Why, then, my good friend, as you want my advice,

Another guinea advanced, it is yours in a trice."

"Here it is, my dear sir."—"Very well, now observe, Future downfalls to shun, from this rule never swerve,

When challenged upstairs, luck for hundreds to try, Tell your frolicsome friends, that you don't play so high!"

The card-player has had his epitaph. Let us conclude with it:

'His card is cut—long days he shuffled through

The game of life—he dealt as others do:

Though he by honours tells not its amount.

When the last trump is played, his tricks will count.'

DECEMBER 29.

St Marcellus, abbot of the Accemetes, confessor, about 485. St Evroul, abbot and confessor, 596. St Thomas Becket, archbishop of Canterbury, 1170.

Born.—Sir Archibald Alison, Bart., historian, 1792, *Kenley, Shropshire.*

Died.—Thomas Becket, archbishop of Canterbury, murdered, 1170; Sebastian Castalio, scholar and controversialist, 1563, *Basle*; Viscount William Stafford, victim of 'Popish Plot,' executed, 1680; Dr Thomas Sydenham, distinguished physician, 1689, *London*; Brook Taylor, algebraist, 1731, *London*; Joseph Saurin, mathematician and natural philosopher, 1737, *Paris*; Jacques Louis David, painter, 1825, *Brussels*; Rev. T. R. Malthus, political economist, 1834, *Bath*; William Crotch, musical composer, 1847, *Taunton*; W. H. Maxwell, novelist and historian, 1850, *Musselburgh*; James, Marquis of Dalhousie, statesman, 1860.

THOMAS BECKET.

The career and fate of this celebrated ecclesiastic, form one of the most remarkable episodes of English history in the twelfth century. The leading incidents of his life are familiar to all, but a brief and comprehensive recapitulation may nevertheless not be unacceptable to our readers.

Thomas Becket or à Becket, as his name is sometimes written, was the son of a London merchant, who bestowed on him a good education. For a time young Becket was employed in the office of the sheriff of London, and there made the acquaintance of Theobald, archbishop of Canterbury, who sent him to study civil law in Italy and France, and afterwards, besides presenting him with two ecclesiastical livings, intrusted him with the management of certain negotiations with the see of Rome, requiring the utmost tact and address. The young clerk succeeded so well in this mission as not only to justify the confidence reposed in him by his patron, but also in attracting the notice of Henry II., who conceived rapidly such an attachment to Becket personally, and so exalted an estimate of his abilities, that in 1158 he promoted his new favourite to the dignity of chancellor of the realm. The king had no occasion to accuse himself of injudiciousness in taking this step, for

Becket proved not only a most accomplished courtier and delightful companion, but likewise a clear-headed and sagacious statesman. He even gave evidence of military tastes and prowess by accompanying the king on an expedition to France, where, at the head of a company of knights, he took active part in several sieges, and unhorsed in single combat a French knight of high renown for bravery and feats of arms.

But Henry was not content with the position to which he had raised Becket, and in which, if he had been allowed to remain, his life would, in all probability, have ultimately terminated in tranquillity and honours, instead of the awful tragedy by which it was prematurely brought to a close. Desirous of curbing the growing pretensions of the church, and believing that in his chancellor he would find a ready coadjutor in this project, the king insisted on the latter accepting the archbishopric of Canterbury, which had just then become vacant. Becket, it is said, would have declined this accession of honours, and frankly warned the king of the consequences which he must expect. Henry however insisted, and Becket was forthwith installed in his new dignity.

A most extraordinary change of conduct now took place. From the gay and worldly chancellor, who joined in all his sovereign's amusements, and indulged in every obtainable luxury and splendour, Becket was transformed to the austere and enthusiastic monk, whose sole aim is the exaltation of his order, and the extension of the power of the church. The first sign of this altered procedure was the resigning of the office of chancellor, an act which likewise occasioned the first coldness between him and the king. Then followed an exhibition of self-mortification and asceticism, such as in mediæval times was regarded as the most conclusive evidence of goodness and piety. Yet much exaggeration seems to have taken place on this subject, as Becket, notwithstanding his numerous charities, and those ostentatious but highly-esteemed acts of humility which he now practised, maintained to the close of his life a great magnificence in establishment and retinue.

After many causes of dissension and ill-will between Henry and the archbishop, produced by the zeal and energy of the latter in prosecuting the interests of the church and the claims of his own see in particular, an open rupture was at last occasioned by the immunity which the clergy claimed from secular jurisdiction, and which Becket vehemently urged and supported. The king was no less resolute in asserting the subjection of priests to the authority of the ordinary courts, in the event of crimes committed by ecclesiastics, and a vital struggle ensued, in which Henry had for a time the advantage. Becket was forced to quit the country as an exile, and remained abroad for several years. Through the influence of the pope and the king of France, a seeming reconciliation was at last effected in July 1170, and in the beginning of the ensuing month of December, the formidable champion of ecclesiastical rights returned to England, and entered again amid acclamations the archiepiscopal metropolis of Canterbury.

The reconciliation had proved but hollow with both parties, neither of whom were disposed to recede from what they considered their rights.

Three prelates, the archbishop of York, and the bishops of London and Salisbury, had given inexpressible offence to Becket by performing, in the absence of the latter, the coronation of the king's eldest son, Prince Henry, an act which the archbishop of Canterbury resented as an unpardonable encroachment on his exclusive privileges. He published letters of excommunication against the offending bishops, who forthwith made their way to France, where Henry II. was then residing, in the castle of Bur, near Bayeux, and reported this fresh instance of Becket's resistance to the authority of the crown. Henry's rage on receiving this intelligence was tremendous, and vented itself in complaints against those lukewarm and spiritless courtiers, who, he said, allowed this upstart priest to treat their sovereign with such insolence. These fatal words proved Becket's death-warrant. Four courtiers, named respectively Reginald Fitzurse, Hugh de Morville, William de Tracy, and Richard le Breton, understanding these expressions as an authorisation of the murder of Becket, quitted forthwith the castle, and took their way to the coast, where they embarked for England. Arriving there, they assembled on the 28th of December 1170, at the castle of Saltwood, occupied by Randolph de Broc, a mortal enemy of Becket, and here, it is said, they concocted in darkness, without seeing each other's faces, the scheme for the murder of Becket. The next day, the party proceeded to Canterbury, and in the afternoon made their way into the archbishop's palace and the apartment where Becket was sitting with his clergy. Fitzurse acted as the spokesman, and announcing that he and his companions had come to the archbishop with a message from the king, demanded satisfaction in the absolution of the three bishops, and compliance with the royal will in that and other matters. Becket defended his conduct, and a scene of violent and mutual recrimination ensued. The conspirators then, boiling with passion, quitted the palace, which they had entered unarmed, and thereupon girded on their swords, one or two of the party, moreover, arming themselves with hatchets. Having returned to the archbishop's residence, they found the avenues of admission barred against them, but they at last succeeded in forcing an entrance. Becket, meantime, had been urged by a small band of faithful adherents to take refuge within the cathedral, and though, for a time, he rejected this proposal as cowardly and undignified, he was at last induced to do so on being reminded that it was now five o'clock, and the time of vesper-service. Quitting the palace by a private door, he gained the cloisters of the cathedral, and from thence entered the church by a door in the north transept. His enemies, who had now by this time succeeded in making their way into the cloisters, followed him by the same entrance into the sacred building, and here Becket and his foes were again confronted. A scene of altercation similar to what had already taken place in the palace now recommenced, and after much invective on both sides, Fitzurse struck Becket a blow on the head with his sword, which, however, did no further damage than knocking off his cap. Tracy followed with a more deadly stroke, and several additional blows left the archbishop a lifeless corpse on the pavement of the church.

It is needless to pursue the terrible story any further. No punishment beyond excommunication and the enforced pilgrimage of one or two of the conspirators to the Holy Land, seems to have befallen the murderers; for by a singular reciprocity, it would appear that, by the same principle for which Becket contended so stoutly—the immunity of the clergy from sacred jurisdiction—crimes committed by laymen against priests were, like the offences of the clergy themselves, only cognisable before ecclesiastical courts, where, in both cases, the highest sentence that could be pronounced was excommunication. But the benefit accruing to the church from the archbishop's death was incalculable. Becket was now regarded as, and received the honours of, a martyr, and it was with great difficulty that Henry succeeded in obtaining absolution from the pope for the passionate expressions which had indirectly authorised the archbishop's murder. The king's subsequent pilgrimage to Canterbury, and his painful penance of a day and a night at the tomb of the sainted Thomas, exhibited thoroughly the church's triumph over the secular power. The victory which the latter had gained in the celebrated 'Constitutions of Clarendon,' at the commencement of the rupture between Becket and Henry II., was now more than avenged. In the advanced supremacy of ecclesiastical over temporal sway, which reached its climax in the reign of Henry's son, King John, it may well be averred of Becket's murder that 'it was more than a crime; it was a blunder.'

From the period of Becket's death to the Reformation, his shrine in Canterbury Cathedral continued to be visited by crowds of pilgrims, whose offerings proved as valuable a source of clerical revenue as those of the worshippers at the no less celebrated tomb of St Cuthbert, in the cathedral of Durham. The Canterbury pilgrimages have been immortalised by Chaucer, from whose *Canterbury Tales* we learn that piety and devotion were by no means uniformly characteristic of the visitors who flocked, on such occasions, to the shrine of St Thomas. On the overthrow of the Roman Catholic religion in the sixteenth century, Becket's shrine was dismantled and plundered, and the name of the saint himself excluded from the calendar, in the reformed liturgy. An entire revulsion of feeling now took place regarding him, and from the rank of a holy man and a martyr he descended in general estimation to the level of a scheming priest and audacious rebel, whilst his murder, if not actually approved, was regarded in the light of a righteous judgment for his overweening ambition. This view of his character prevailed generally up to the present day, when a second revolution in public opinion took place; and Becket has found several able panegyrist, not only on grounds of Roman Catholic or Anglican high-church predilections and sympathies, but in reference to principles of a different nature—motives of patriotism and resistance to feudal tyranny. These last-mentioned views are advocated by M. Thierry and Mr Froude; the former of whom regards Becket in the same aspect that he does Robin Hood, as the vindicator of Saxon rights and liberties against Norman oppression; the latter sees in him a bulwark to the people against monarchical and baronial outrage, such as the power of the church actually often was in medieval times. M. Thierry's

view seems to be entirely fanciful; and neither in this light, nor in the view taken by Mr Froude, is it possible to attribute to Becket the character either of a martyr or a hero. That he was not a hypocrite, may be fairly conceded; and he appears to have been in many respects a really charitable and generous-minded man. But his disposition was both obstinate and headstrong in the highest degree; and in his machinations to render the church paramount, we can only see the promptings of an ambition alike undeserving of commendation on religious or moral grounds, and most dangerous to the progress of the intellectual and personal liberties of mankind. The *Constitutions of Clarendon*, against which he protested so strenuously, contained nothing more objectionable than what has come to be universally recognised as essential to the maintenance of good order and liberty in the various relations of church and state. In the opinions of certain parties, it is impossible to exalt too highly the power of the church, and under no circumstances can any procedure be deemed inexorable, whose object is the furtherance of this holy cause. To persons of this way of thinking, Becket must of course ever appear as a hero.

LEGEND OF BECKET'S PARENTS.

In connection with the renowned Thomas Becket, noticed in the preceding article, a curious story is related of the marriage of his parents. It is said that Gilbert, his father, had in his youth followed the Crusaders to Palestine, and while in the East had been taken prisoner by a Saracen or Moor of high rank. Confined by the latter within his own castle, the young Englishman's personal attractions and miserable condition alike melted the heart of his captor's daughter, a fair Mohammedan, who enabled him to escape from prison and regain his native country. Not wholly disinterested, however, in the part which she acted in this matter, the Moor's daughter obtained a promise from Gilbert, that as soon as he had settled quietly in his own land, he should send for, and marry his protectress. Years passed on, but no message ever arrived to cheer the heart of the love-lorn maiden, who thereupon resolved to proceed to England and remind the forgetful knight of his engagement. This perilous enterprise she actually accomplished; and though knowing nothing of the English language beyond the Christian name of her lover and his place of residence in London, which was Cheapside, she contrived to search him out; and with greater success than could possibly have been anticipated, found him ready to fulfil his former promise by making her his wife. Previous to the marriage taking place, she professed her conversion to Christianity, and was baptized with great solemnity in St Paul's Cathedral, no less than six bishops assisting at the ceremony. The only child of this union was the celebrated Thomas Becket, whose devotion in after-years to the cause of the church, may be said to have been a befitting recompense for the attention which her ministers had shewn in watching over the spiritual welfare of his mother.

This singular story has found credence in recent times with Dr Giles, M. Thierry, Mr Froude, and M. Michelet; but by one of the most judicious modern biographers of Becket, Canon Robertson,

it is rejected as a legendary tale, wholly unsupported by the evidence of those chroniclers who were Becket's contemporaries. It gave rise, both in England and Scotland, to more than one ballad, in which the elder Becket's imprisonment in the East, his liberation by the aid of the Moorish damsel, and the latter's expedition to Britain in quest of him, are all set forth with sundry additions and embellishments. In one of these, which bears the name of *Lord Beichan*, the fair young Saracen, who, by some extraordinary corruption or misapprehension, is recorded under the designation of *Susie Pye*, follows her lover to Scotland, and there surprises him at the very hour when he is about to unite himself in marriage to another lady. The faithless lover on being reminded of his previous compact, professes the utmost contrition, and declares at once his resolve to wed the Saracen's daughter, who had given such evidence of her love and attachment to him, by making so long and dangerous a journey. The hapless bride, who would otherwise have speedily become his wife, is unceremoniously dismissed along with her mother; and the nuptials of Lord Beichan and Susie Pye are then celebrated with great magnificence. Another ballad on the same subject is entitled *Young Bekie*, but the heroine here is represented as the daughter of the king of France, and distinguished by the title of *Burd Isbel*. By such romantic embellishments, and so incongruous and ridiculous a nomenclature, did the ballad-writers of a later age embody in verse the story of the parents of the renowned archbishop of Canterbury.

MALTHUS.

This celebrated writer, whose theory on population has been the subject of so much unmerited abuse, was the son of a gentleman of independent fortune, who possessed a small estate in the county of Surrey. Young Malthus received his early education mainly from a private tutor, and subsequently entered Jesus' College, Cambridge, where he studied for the church, and obtained a fellowship in 1797. For a time, he held the incumbency of a small parish in Surrey near his native place.

It was not in the church, however, that Mr Malthus was to become famous. Through life, the bent of his genius seems to have led him in the direction of political economy and statistics; and in pursuit of information on this subject, he made extensive journeys and inquiries through various countries of Europe. The first edition of the work, which has conferred on him such notoriety, appeared in 1798, under the title of *An Essay on the Principle of Population, as it affects the Future Improvement of Society, with Remarks on the Speculations of Mr Godwin, M. Condorcet, and other Writers*. In subsequent issues, the title of the work was changed to its present form: *An Essay on the Principle of Population; or a View of its Past and Present Effects on Human Happiness, with an Inquiry into our Prospects respecting the Future Removal or Mitigation of the Evils which it occasions*. The leading principle in this work is, that population, when unchecked, doubles itself at the end of every period of twenty-five years, and thus increases, in a geometrical progression, or the ratio of 1, 2, 4, 8, 16,

32; whilst the means of subsistence increases only, in an *arithmetical* progression, or the ratio of 1, 2, 3, 4, 5, 6. The author discusses the question of the various restrictions, physical and moral, which tend to keep population from increasing, and thus prevent it outstripping the means of subsistence in the race of life. A misapprehension of the writer's views, combined with his apparent tendency to *pessimism* in the regarding of misery and suffering as the normal condition of humanity, has contributed, notwithstanding the philosophical soundness of many of his theories, to invest the name of Malthus with much opprobrium.

When the common or vulgar impression regarding Mr Malthus's celebrated essay is considered, it is surprising to find that *the man* was one of the most humane and amiable of mortals. His biographer tells us, it would be difficult to overestimate the beauty of his private life and character. His life 'a perpetual flow of enlightened benevolence, contentment, and peace;' 'his temper mild and placid, his allowances for others large and considerate, his desires moderate, and his command over his own passions complete.' 'No unkind or uncharitable expression respecting any one, either present or absent, ever fell from his lips. . . . All the members of his family loved and honoured him; his servants lived with him till their marriage or settlement in life; and the humble and poor within his influence always found him disposed, not only to assist and improve them, but to treat them with kindness and respect.' 'To his intimate friends, his loss can rarely, if ever, be supplied; there was in him a union of truth, judgment, and warmth of heart, which at once invited confidence, and set at nought all fear of being ridiculed or betrayed. You were always sure of his sympathy; and wherever the case allowed it, his assistance was as prompt and effective as his advice was sound and good.'

Shortly after his marriage in 1805 to Miss Eckersall, Mr Malthus was appointed professor of modern history and political economy at the East India College at Haileybury, and held this office till his death. He expired on 29th December 1834, at Bath, at the age of sixty-eight, leaving behind him a son and daughter.

DECEMBER 30.

St Sabinus, bishop of Assisium, and his companions, martyrs, 304. St Anysia, martyr, 304. St Maximus, confessor, about 662.

Born.—Titus, Roman emperor, 41 A.D.; Sir John Holt, lord chief-justice, 1642, *Thame, Oxfordshire*; John Philips, poet (*The Splendid Shilling*), 1676, *Bampton*.

Died.—Richard, Duke of York, killed at Wakefield, 1460; Roger Ascham, eminent scholar and writer, 1568; John Baptist Van Helmont, alchemist, 1644, *Holland*; Jacques Saurin, eminent Protestant divine, 1730, *Hague*; James Francis Edward, the elder Pretender, 1765, *Rome*; Paul Whitehead, poet, 1774, *London*; Olaus Gerhard Tychsel, orientalist, 1815, *Rostock*; Samuel Hibbert Ware, miscellaneous writer, 1848, *Altrincham, Cheshire*.

* Memoir prefixed to Malthus's *Political Economy*, 2d edition, 1836.

ROGER ASCHAM.

Roger Ascham, instructor of Queen Elizabeth in Latin and Greek, was born in 1515, at the village of Kirby-Wiske, near Northallerton, in Yorkshire, the youngest of the three sons of John Ascham, who was house-steward to the Scroope family. Educated at Cambridge University, he in time rose to be the university orator, and became noted for his zeal in promoting, what was then a novelty in England—the study of the Greek language. In 1545, he published *Toxophilus*, a treatise on archery, for which Henry VIII. rewarded him with a pension of £10 per annum—a sum then of much higher value than it appears to us now. This work was written not only as a specimen of an improved style of composition in English, but with a view to recommend the continuance of the use of the bow as a weapon of war, which the hand-gun, or musket, was then beginning to supersede, and also as an invigorating and healthful exercise. It is composed in the form of a dialogue between Toxophilus and Philologus, and besides praising and teaching the practice of archery, contains a large admixture of philosophical disquisition. In 1548, Ascham, on the death of William Grindall, who had been his pupil, was appointed instructor in the learned languages to the Lady Elizabeth, afterwards queen; but at the end of two years, on some dispute or disgust with her attendants, he resigned his situation, and returned to his college. Soon afterwards, he accepted the post offered to him of secretary to Sir Richard Morrisine, who was about to proceed on an embassy to the court of the Emperor Charles V., in Germany. He remained abroad till the death of Edward VI., in 1553, when the embassy was recalled to England. During his absence, he was appointed Latin secretary to King Edward. It is somewhat extraordinary that though Queen Mary and her ministers were papists, and Ascham a Protestant, he was retained in his office of Latin secretary, his pension was increased to £20, and he was allowed to retain his fellowship and his situation as university orator. Soon after his return, however, he married, and then, of course, resigned his fellowship. On the death of Mary, in 1558, Queen Elizabeth not only required his services as her Latin secretary, but as her instructor in Greek, and he resided at court during the remainder of his life. He died December 30, 1568, in the fifty-third year of his age.

Only two works were published by Ascham during his lifetime, *Toxophilus*, and a *Report of the Affairs of Germany and of the Emperor Charles's Court*, which contains some curious descriptions of the personal appearance and manners of the principal persons whom he saw and conversed with. His most valuable work, *The Schoolmaster*, was published by his widow. Dr Johnson has remarked that the system of instruction recommended in this work is perhaps the best ever given for the study of languages. His Latin letters were collected and published by his friend, Edward Grant, master of Westminster School, who prefixed to them a Life of Ascham written in Latin. The English works were reprinted in a collected form in 4to, in 1761, and to this volume was prefixed a life, written by Dr Johnson, which has served as a basis for all subsequent notices of Ascham.

THE STORY OF THE *RESOLUTE*.

Perhaps the most remarkable voyage on record, was that of the arctic exploring-ship *Resolute*. Abandoned by her officers and crew to anticipated destruction, she, as if instinct with life, made a voyage of a thousand miles *alone*, back to regions of civilisation—as if in indignant protest against her abandonment.

In April 1852, Sir Edward Belcher, with the ships *Assistance*, *Pioneer*, *Resolute*, *Intrepid*, and *North Star*, left England to search for Sir John Franklin and his companions. Captain McClure, in the *Investigator*, was at that time struggling against appalling difficulties in the ice-bound seas north of the American continent. On the 6th of April 1853, Captain McClure and Lieutenant Pim had their memorable meeting on the ice; the former having come from the Pacific, the latter from the Atlantic. Lieutenant Pim belonged to Captain Kellett's ship *Resolute*, part of Belcher's squadron. The *Investigator*, the ship with which McClure had practically solved the problem of the North-west Passage, was abandoned in the ice, and her commander and the remainder of the crew were received on board the *Resolute*. With the exception of this single fact of rescuing McClure, Belcher was singularly unfortunate: achieving little or nothing in other ways. On the 15th of May 1854, at his express command, but sorely against their will, Captain Kellett and Commander McClintock finally abandoned the *Resolute* and *Intrepid*, locked in ice off the shores of Melville Island. On the 24th of August, in the same year, again at the express command of Belcher, Commander Sherard Osborn abandoned the *Pioneer*, while Belcher himself abandoned the *Assistance*, both ships being ice-locked in Wellington Channel. The officers and crews of no less than five abandoned ships reached England before the close of the year.

It was one of these five deserted ships which, we may almost say, came to life again many months afterwards; to the astonishment of every one conversant with the arctic region. Late in the year 1855, Captain Buddington, in the American whaler *George Henry*, was sailing about in Davis's Strait, when, on the 17th of September, about forty miles from Cape Mercy, he descried a ship presenting unusual appearances; no signals were put out or answered; and, when he approached, no crew were visible. It was the *Resolute*, as sound and hearty as ever, with the exception of a little water which had got into the hold, and the spoiling of some of the perishable articles inside. Any one with a map of the arctic regions before him, will see what a lengthened voyage the good old ship must have made from Melville Island, through Barrow Straits, Lancaster Sound, and Baffin's Bay, during the period of 474 days which intervened between her abandonment and her recovery. The probable track is marked in a map attached to Mr McDougall's *Eventful Voyage of the Resolute*. It is supposed that ice, loosened during the short summers of 1854 and 1855, drifted with the current into Davis's Strait, and carried along with it the ship.

The gift of the adventurous old ship by America to England was gracefully managed. The United States congress, on the 25th of August 1856, passed

the following resolution: 'Whereas it has become known to Congress, that the ship *Resolute*, late of the navy of Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, on service in the Arctic Seas in search of Sir John Franklin and the survivors of the expedition under his command, was rescued and recovered in those seas by the officers and crew of the American whale-ship, the *George Henry*, after the *Resolute* had been necessarily abandoned in the ice by her officers and crew, and after drifting still in the ice for more than one thousand miles from the place where so abandoned—and that the said ship *Resolute*, having been brought to the United States by the salvors at great risk and peril, had been generously relinquished by them to Her Majesty's government. Now, in token of the deep interest felt in the United States for the service in which Her Majesty's said ship was engaged when thus necessarily abandoned, and of the sense entertained by Congress of the act of Her Majesty's government in surrendering said ship to the salvors: Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby requested to cause the said ship *Resolute*, with all her armament, equipment, and property on board when she arrived in the United States, and which has been preserved in good condition, to be purchased of her present owners, and that he send the said ship with everything pertaining to her as aforesaid, after being fully repaired and equipped at one of the navy-yards of the United States, back to England under control of the secretary of the navy, with a request to Her Majesty's government, that the United States may be allowed to restore the said ship *Resolute* to Her Majesty's service—and for the purchase of said ship and appurtenances, as aforesaid, the sum of forty thousand dollars, or so much thereof as may be required, is hereby appropriated, to be paid out of any money in the treasury not otherwise appropriated.'

The final incident in the story was the formal presentation of the ship to the Queen of England, on the part of the government of the United States. This presentation was delayed no less than 469 days after the discovery or recovery of the ship by Captain Buddington, owing to various causes, some avoidable and others unavoidable. On the 13th of November 1856, the *Resolute*, in excellent trim after her repairs, set sail, and arrived near Cowes on December the 12th, under the care of Captain Hartstein of the United States navy. Sir George Seymour, naval commander-in-chief at Portsmouth, made arrangements for a royal visit to the recovered ship. The Queen, the Prince Consort, the Prince of Wales, the Princess Royal, and Princess Alice, left Osborne House, and steamed out to the old ship, which was decked out in colours, with the English and American flags flying at the peak. Captain Hartstein and the officers, in full uniform, received the royal party, to whom they were severally introduced. Captain Hartstein then said to the Queen: 'Allow me to welcome your Majesty on board the *Resolute*, and, in obedience to the will of my countrymen and of the President of the United States, to restore her to you, not only as an evidence of friendly feeling to your sovereignty, but as a token of love,

admiration, and respect to your Majesty personally.' The Queen made a short but kindly recognition of this address. The royal party then went over the ship, and examined it with great interest. Captain Hartstein, with a map spread out before him, traced the course which the deserted ship had followed, and the relation which that course bore to arctic voyages generally. Captain Hartstein, in reply to a question from the Prince Consort, expressed a belief that Sir John Franklin, or some of his companions, might still be alive, among the Esquimaux—a belief which many persons entertained at that time, but which gradually gave way to hopelessness. After the departure of the royal visitors, a *dejeuner* was given in the ward-room, during which one 'toast' was, 'The future success of the *Resolute*, and may she be again employed in prosecuting the search for Sir John Franklin and his comrades.'

The Americans had done their self-imposed work well and gracefully. With such care had the repairs and re-equipment been performed, that not only had the ship's stores—even to flags—been replaced, but the officers' libraries, pictures, musical-boxes, &c., had been preserved, and with excellent taste had all been restored to their original positions. The royal family were touched at the sight of these little memorials, as they went from cabin to cabin of the ship. Captain Hartstein was invited to visit the Queen at Osborne that evening. On the following day the *Resolute* was brought into Portsmouth harbour, amid great rejoicings, and complimentary salutes to the American flag. Many banquets were given to Captain Hartstein and his officers on subsequent days; the chief of which, for grandeur and importance, was given by the mayor and corporation of Portsmouth. A deputation from the Shipowners' Association of Liverpool came to Portsmouth, with an invitation for the American officers; which, however, their limited time prevented them from accepting. The prime minister entertained Captain Hartstein at his seat in Hampshire; the government gave a dinner to the American sailors on Christmas-day; and Lady Franklin invited all the officers to an entertainment provided by her for them at Brighton.

At length, on the 30th of December, the formal transfer of the interesting old ship took place. Captain George Seymour, of the *Victory*, with two subordinate officers, and small parties of seamen and marines, went on board the *Resolute*. Precisely at one o'clock, the *Victory* hoisted the American flag at her main, and fired a salute of twenty-one guns; while Captain Hartstein hauled down the American colours from the *Resolute*, and substituted the British, and the American crew manned the yards to give three cheers to the *Victory*. Captain Hartstein, with his officers around him, then addressed Captain Seymour: 'Sir, the closing scene of my most pleasant and important mission has now to be performed. And permit me to hope that, long after every timber in her sturdy frame shall have perished, the remembrance of the old *Resolute* will be cherished by the people of the respective nations. I now, with a pride totally at variance with our professional ideas, strike my flag, and to you, sir, give up the ship.' Captain Seymour made a suitable reply; and soon afterwards the whole of the

American officers and seamen were conveyed on board the United States' mail steam-ship *Washington*, in which they returned to their own country. The British government offered to convey them in the war-steamer *Retribution*, in friendly compliment to the American government; but arrangements previously made interfered with this plan.

The issue of this affair was, after all, not a pleasant one. The Admiralty, with indecorous haste, ordered the brave old ship to be dismantled and reduced to the state of an unsightly hulk. This was a bit of paltry economy, which assorted ill with extravagance in other matters. It was injudicious in many ways; for the old ship would have formed a memento of arctic expeditions; it would have afforded testimony concerning the currents and drift-ice of those regions; it would have been a pleasant object for Englishmen to visit, side by side with Nelson's famous ship in Portsmouth harbour; and it would have been gratifying to Americans visiting England, to see that the liberality of their government had been appreciated.

PRIMITIVE STYLE OF SKATING.

Fitz-Stephen, in his account of the sports of the young citizens of London on the ice in the twelfth century (as quoted by us under January 20), notes their expertness in using the bones of animals as a means of increasing their velocity, 'taking in their hands poles shod with iron, which at times they strike against the ice, they are carried along with as great rapidity as a bird flying, or a bolt discharged from a cross-bow.' The cut here given illustrates this practice. A child is using the jaw-bones of a horse or cow as a sledge, and propelling himself with pointed staves. It is copied from a Dutch engraving, representing sports on the ice in the town-ditch at Antwerp, 1594.

DECEMBER 31.

St Sylvester, pope and confessor, 335. St Columba, virgin and martyr, 3d century. St Melania the Younger, 439.

New-year's Eve, or Hogmanay.

As a general statement, it may be asserted that neither the last evening of the old year nor the first day of the new one is much observed in England as an occasion of festivity. In some parts of the country, indeed, and more especially in the northern counties, various social merry-makings take place; but for the most part, the great annual holiday-time is already past. Christmas Eve, Christmas-day, and St Stephen's or Boxing Day have absorbed almost entirely the tendencies and opportunities of the community at large in the direction of joviality and relaxation. Business and

the ordinary routine of daily life have again been resumed ; or, to apply to English habits the words of an old Scottish rhyme still current, but evidently belonging to the old times, anterior to the Reformation, when Christmas was the great popular festival :

'Yule's come and Yule's gane,
And we hae feasted weel ;
Sae Jock maun to his flail again,
And Jenny to her wheel.'

Whilst thus the inhabitants of South Britain are settling down again quietly to work after the festivities of the Christmas season, their fellow-subjects in the northern division of the island are only commencing their annual saturnalia, which, till recently, bore, in the license and boisterous merriment which used to prevail, a most unmistakable resemblance to its ancient pagan namesake. The epithet of the *Daft* [mad] *Days*, applied to the season of the New Year in Scotland, indicates very expressively the uproarious joviality which characterised the period in question. This exuberance of joyousness—which, it must be admitted, sometimes led to great excesses—has now much declined, but New-year's Eve and New-year's Day constitute still the great national holiday in Scotland. Under the 1st of January, we have already detailed the various revelries by which the New Year used to be ushered in, in Scotland. It now becomes our province to notice those ceremonies and customs which are appropriate to the last day of the year, or, as it is styled in Scotland, *Hogmanay*.

This last term has puzzled antiquaries even more than the word Yule,* already adverted to ; and what is of still greater consequence, has never yet received a perfectly satisfactory explanation. Some suppose it to be derived from two Greek words, ἅγια μῆνη (the holy moon or month), and in reference to this theory it may be observed, that, in the north of England, the term used is *Hagmena*, which does not seem, however, to be confined to the 31st of December, but denotes generally the period immediately preceding the New Year. Another hypothesis combines the word with another sung along with it in chorus, and asserts 'Hogmanay, trollolay!' to be a corruption of '*Homme est né—Trois Rois là*' ('A Man is born—Three Kings are there'), an allusion to the birth of our Saviour, and the visit to Bethlehem of the Wise Men, who were known in medieval times as the 'Three Kings.' But two additional conjectures seem much more plausible, and the reader may select for himself what he considers the most probable. One of these is, that the term under notice is derived from *Hoggu-nott*, *Hogenat*, or *Hogg-night*, the ancient Scandinavian name for the night preceding the feast of Yule, and so called in reference to the animals slaughtered on the occasion for sacrificial and festal purposes—the word *hogg* signifying to *kill*. The other derivation of Hogmanay is from '*Au gui menez*' ('To the mistletoe go'), or '*Au gui l'an neuf*' ('To the mistletoe this New Year'), an allusion to the ancient Druidical ceremony of gathering that plant. In the *patois* of Touraine, in France, the word used is *Aguilanneu*; in Lower Normandy, and in

Guernsey, poor persons and children used to solicit a contribution under the title of *Hoguinnanno* or *Oguinnano*; whilst in Spain the term, *Aguinaldo*, is employed to denote the presents made at the season of Christmas.

In country places in Scotland, and also in the more retired and primitive towns, it is still customary on the morning of the last day of the year, or Hogmanay, for the children of the poorer class of people to get themselves swaddled in a great sheet, doubled up in front, so as to form a vast pocket, and then to go along the streets in little bands, calling at the doors of the wealthier classes for an expected dole of oaten-bread. Each child gets one quadrant section of oat-cake (sometimes, in the case of particular favourites, improved by an addition of cheese), and this is called their *hogmanay*. In expectation of the large demands thus made upon them, the housewives busy themselves for several days beforehand in preparing a suitable quantity of cakes. The children on coming to the door cry, 'Hogmanay!' which is in itself a sufficient announcement of their demands; but there are other exclamations which either are or might be used for the same purpose. One of these is :

'Hogmanay,
Trollolay,

Give us of your white bread, and none of your gray.'

And another favourite rhyme is :

'Get up, goodwife, and shake your feathers,
And diuna think that we are beggars ;
For we are bairns come out to play,
Get up and gie's our hogmanay !'

The following is of a moralising character, though a good deal of a truism :

'Get up, goodwife, and binna sweir,
And deal your bread to them that's here ;
For the time will come when ye'll be dead,
And then ye'll neither need ale nor bread.'

The most favourite of all, however, is more to the point than any of the foregoing :

'My feet's cauld, my shoon's thin ;
Gie's my cakes, and let me rin !'

It is no unpleasing scene, during the forenoon, to see the children going laden home, each with his large apron belling out before him, stuffed full of cakes, and perhaps scarcely able to waddle under the load. Such a mass of oaten alms is no inconsiderable addition to the comfort of the poor man's household, and enables him to enjoy the New-year season as much as his richer neighbours.

In the primitive parish of Deerness, in Orkney, it was customary, in the beginning of the present century, for old and young of the common class of people to assemble in a great band upon the evening of the last day of the year, and commence a round of visits throughout the district. At every house they knocked at the door, and on being admitted, commenced singing, to a tune of its own, a song appropriate to the occasion. The following is what may be termed a *restored* version of this chant, the imagination having been called on to make up in several of the lines what was deficient in memory. The 'Queen Mary' alluded to is evidently the Virgin :

* See p. 745 of this volume.

'This night it is guid New'r E'en's night,
We're a' here Queen Mary's men ;
And we're come here to crave our right,
And that's before our Lady.

The very first thing which we do crave,
We're a' here Queen Mary's men ;
A bonny white candle we must have,
And that's before our Lady.

Goodwife, gae to your butter-ark,
And weigh us here ten mark.

Ten mark, ten pund,
Look that ye grip weel to the grund.*
Goodwife, gae to your geelin vat,
And fetch us here a skeel o' that.

Gang to your awmrie, gin ye please,
And bring frae there a yow-milk cheese.

And syne bring here a sharpening-stane,
We'll sharp our whittles ilka ane.

Ye'll cut the cheese, and eke the round,
But aye take care ye cutna your thoom.

Gae fill the three-pint cog o' ale,
The maut maun be aboon the meal.

We houp your ale is stark and stout,
For men to drink the auld year out.

Ye ken the weather's snaw and sleet,
Stir up the fire to warm our feet.

Our shoon's made o' mare's skin,
Come open the door, and let's in.'

The inner-door being opened, a tremendous rush was made *ben* the house. The inmates furnished a long table with all sorts of homely fare, and a hearty feast took place, followed by copious libations of ale, charged with all sorts of good-wishes. The party would then proceed to the next house, where a similar scene would be enacted. How they contrived to take so many suppers in one evening, heaven knows ! No slight could be more keenly felt by a Deerness farmer than to have his house passed over unvisited by the New-year singers.

The doings of the *guisers* or *guizards* (that is, masquers or *mummers* †) form a conspicuous feature in the New-year proceedings throughout Scotland. The favourite night for this exhibition is Hogmanay, though the evenings of Christmas, New-year's Day, and Handsel Monday, enjoy likewise a privilege in this respect. Such of the boys as can lay any claim to the possession of a voice have, for weeks before, been poring over the collection of 'excellent new songs,' which lies like a bunch of rags in the window-sill ; and being now able to screech up 'Barbara Allan,' or the 'Wee cot-house and the wee kail-yardie,' they determine upon enacting the part of guisers. For this purpose they don old shirts belonging to their fathers, and mount mitre-shaped casques of brown paper, possibly borrowed from the Abbot of Unreason ;

* In stooping into a deep ark, or chest, there is of course a danger of falling in, unless the feet be kept firm to the ground.

† For an account of the English mummers, see p. 739 of this volume.

attached to this is a sheet of the same paper, which, falling down in front, covers and conceals the whole face, except where holes are made to let through the point of the nose, and afford sight to the eyes and breath to the mouth. Each vocal guiser is, like a knight of old, attended by a sort of humble squire, who assumes the habiliments of a girl, with an old-woman's cap and a broomstick, and is styled 'Bessie.' Bessie is equal in no respect, except that she shares fairly in the proceeds of the enterprise. She goes before her principal, opens all the doors at which he pleases to exert his singing powers ; and busies herself, during the time of the song, in sweeping the floor with her broomstick, or in playing any other antics that she thinks may amuse the indwellers. The common reward of this entertainment is a halfpenny, but many churlish persons fall upon the unfortunate guisers, and beat them out of the house. Let such persons, however, keep a good watch upon their cabbage-gardens next Halloween !

The more important doings of the guisers are of a theatrical character. There is one rude and grotesque drama which they are accustomed to perform on each of the four above-mentioned nights ; and which, in various fragments or versions, exists in every part of Lowland Scotland. The performers, who are never less than three, but sometimes as many as six, having dressed themselves, proceed in a band from house to house, generally contenting themselves with the kitchen for an arena ; whither, in mansions presided over by the spirit of good-humour, the whole family will resort to witness the spectacle. Sir Walter Scott, who delighted to keep up old customs, and could condescend to simple things without losing genuine dignity, invariably had a set of guisers to perform this play before his family both at Ashestiel and Abbotsford. The drama in question bears a close resemblance, with sundry modifications, to that performed by the mummers in various parts of England, and of which we have already given a specimen.*

Such are the leading features of the Hogmanay festivities in Scotland. A similar custom to that above detailed of children going about from house to house, singing the *Hagmena* chorus, and obtaining a dole of bread or cakes, prevails in Yorkshire and the north of England ; but, as we have already mentioned, the last day of the year is not in the latter country, for the most part, invested with much peculiar distinction. One or two closing ceremonies, common to both countries—the requiem, as they may be termed, of the dying year—will be more appropriately noticed in the concluding article of this work.

BURNING OF 'THE CLAVIE.'

A singular custom, almost unparalleled in any other part of Scotland, takes place on New-year's Eve (old style) at the village of Burghhead, on the southern shore of the Moray Firth, about nine miles from the town of Elgin. It has been observed there from time immemorial, and both its origin, and that of the peculiar appellation by which it is distinguished, form still matter of conjecture and dispute for antiquaries. The following extract from the *Bunffshire Journal* presents a very interesting

* See p. 740 of this volume.

and comprehensive view of all that can be stated regarding this remarkable ceremonial :

Any Hogmanay afternoon, a small group of seamen and coopers, dressed in blue overfrocks, and followed by numbers of noisy youngsters, may be seen rapidly wending their way to the south-western extremity of the village, where it is customary to build the Clavie. One of the men bears on his shoulders a stout Archangel tar-barrel, kindly presented for the occasion by one of the merchants, who has very considerably left a quantity of the resinous fluid in the bottom. Another carries a common herring-cask, while the remainder are laden with other raw materials, and the tools necessary for the construction of the Clavie. Arrived at the spot, three cheers being given for the success of the undertaking, operations are commenced forthwith. In the first place, the tar-barrel is sawn into two unequal parts ; the smaller forms the groundwork of the Clavie, the other is broken up for fuel. A common fir prop, some four feet in length, called the "spoke," being then procured, a hole is bored through the tub-like machine, that, as we have already said, is to form the basis of the unique structure, and a long nail, made for the purpose, and furnished gratuitously by the village blacksmith, unites the two. Curiously enough, no hammer is allowed to drive this nail, which is "sent home" by a smooth stone. The herring-cask is next demolished, and the staves are soon undergoing a diminution at both extremities, in order to fit them for their proper position. They are nailed, at intervals of about two inches all round, to the lower edge of the Clavie-barrel, while the other ends are firmly fastened to the spoke, an aperture being left sufficiently large to admit the head of a man. Amid tremendous cheering, the finished Clavie is now set up against the wall, which is mounted by two stout young men, who proceed to the business of filling and lighting. A few pieces of the split-up tar-barrel are placed in a pyramidal form in the inside of the Clavie, enclosing a small space for the reception of a burning peat, when everything is ready. The tar, which had been previously removed to another vessel, is now poured over the wood ; and the same inflammable substance is freely used, while the barrel is being closely packed with timber and other combustible materials, that rise twelve or thirteen inches above the rim.

'By this time the shades of evening have begun to descend, and soon the subdued murmur of the crowd breaks forth into one loud, prolonged cheer, as the youth who was despatched for the fiery peat (for custom says no sulphurous lucifer, no patent congreve dare approach within the sacred precincts of the Clavie) arrives with his glowing charge. The master-builder relieving him of his precious trust, places it within the opening already noticed, where, revived by a hot blast from his powerful lungs, it ignites the surrounding wood and tar, which quickly bursts into a flame. During the short time the fire is allowed to gather strength, cheers are given in rapid succession for "The Queen," "The Laird," "The Provost," "The Town," "The Harbour," and "The Railway," and then Clavie-bearer number one, popping his head between the staves, is away with his flaming burden. Formerly, the Clavie was carried in triumph round every vessel in the harbour, and a handful

of grain thrown into each, in order to insure success for the coming year ; but as this part of the ceremony came to be tedious, it was dropped, and the procession confined to the boundaries of the town. As fast as his heavy load will permit him, the bearer hurries along the well-known route, followed by the shouting Burgheadians, the boiling tar meanwhile trickling down in dark sluggish streams all over his back. Nor is the danger of scalding the only one he who essays to carry the Clavie has to confront, since the least stumble is sufficient to destroy his equilibrium. Indeed, this untoward event, at one time looked on as a dire calamity, foretelling disaster to the place, and certain death to the bearer in the course of next year, not unfrequently occurs. Having reached the junction of two streets, the carrier of the Clavie is relieved ; and while the change is being effected, firebrands plucked from the barrel are thrown among the crowd, who eagerly scramble for the tarry treasure, the possession of which was of old deemed a sure safeguard against all unlucky contingencies. Again the multitude bound along ; again they halt for a moment as another individual takes his place as bearer—a post for the honour of which there is sometimes no little striving. The circuit of the town being at length completed, the Clavie is borne along the principal street to a small hill near the northern extremity of the promontory called the "Doorie," on the summit of which a freestone pillar, very much resembling an ancient altar, has been built for its reception, the spoke fitting into a socket in the centre. Being now firmly seated on its throne, fresh fuel is heaped on the Clavie, while, to make the fire burn the brighter, a barrel with the ends knocked out is placed on the top. Cheer after cheer rises from the crowd below, as the efforts made to increase the blaze are crowned with success.

'Though formerly allowed to remain on the Doorie the whole night, the Clavie is now removed when it has burned about half an hour. Then comes the most exciting scene of all. The barrel is lifted from the socket, and thrown down on the western slope of the hill, which appears to be all in one mass of flame—a state of matters that does not, however, prevent a rush to the spot in search of embers. Two stout men, instantly seizing the fallen Clavie, attempt to demolish it by dashing it to the ground : which is no sooner accomplished than a final charge is made among the blazing fragments, that are snatched up in total, in spite of all the powers of combustion, in an incredibly short space of time. Up to the present moment, the origin of this peculiar custom is involved in the deepest obscurity. Some would have us to believe that we owe its introduction to the Romans ; and that the name Clavie is derived from the Latin word *clavus*, a nail—witches being frequently put to death in a barrel stuck full of iron spikes ; or from *clavis*, a key—the rite being instituted when Agricola discovered that *Ptoroton*, i.e., Burghead, afforded the grand military key to the north of Scotland. As well might these wild speculators have remarked that Doorie, which may be spelled *Durie*, sprang from *durus*, cruel, on account of the bloody ceremony celebrated on its summit. Another opinion has been boldly advanced by one party, to the effect that the Clavie is

Scandinavian in origin, being introduced by the Norwegian Vikings, during the short time they held the promontory in the beginning of the eleventh century, though the theorist advances nothing to prove his assumption, save a quotation from Scott's *Marmion*; while, to crown all, we have to listen to a story that bears on its face its own condemnation, invented to confirm the belief that a certain witch, yclept, "Kitty Clavers," bequeathed her name to the singular rite. Unfortunately, all external evidence being lost, we are compelled to rely entirely on the internal, which we have little hesitation, however, in saying points in an unmistakable manner down through the long vistas of our national history to where the mists of obscurity hang around the Druid worship of our forefathers. It is well known that the elements of fire were often present in Druidical orgies and customs (as witness their *cran-tara*); while it is universally admitted that the bonfires of May-day and Midsummer eve, still kept up in different parts of the country, are vestiges of these rites. And why should not the Clavie be so too, seeing that it bears throughout the stamp of a like parentage? The carrying home of the embers, as a protection from the ills of life, as well as other parts of the ceremony, finds a counterpart in the customs of the Druids; and though the time of observance be somewhat different, yet may not the same causes (now unknown ones) that have so greatly modified the Clavie have likewise operated in altering the date, which, after all, occurs at the most solemn part of the Druidical year?

WYCLIFFE.

Of Wycliffe, 'the morning-star of the Reformation,' very little is with certainty known beyond what is gathered from his writings; hence he has been compared to 'the voice of one crying in the wilderness'—a voice and nothing more—a mighty agency manifest only in its effects. A portrait of the reformer is preserved at Lutterworth, but it can scarcely be of the age assumed; it is probably the copy of a contemporary picture. At any rate, it fulfils our ideal of Wycliffe. We behold, in what was said to be his 'spare, frail, emaciated frame,' the countenance of a Yorkshireman, firm and nervous; of one who could form his own opinion and hold it against the world, and all the more resolutely because against the world.

The year of Wycliffe's birth is usually stated as 1324, three years before the accession of Edward III. His name he took from his native village, situated about six miles from Richmond in Yorkshire, and thus it is sometimes written John de

Wycliffe. In his time there were in truth but two professions—arms and the church; most lawyers, physicians, and even statesmen, were ecclesiastics. The universities were therefore thronged with crowds of students, perhaps as numerous (if mediæval statistics are to be credited) as the entire populations of Oxford and Cambridge at this day. Wycliffe was sent to Oxford, where, in course of time, he rose to high distinction as a lecturer, became a consummate master in dialectics, and the pride of the university. 'He was second to none in philosophy,' writes Knighton, a monk, who abhorred him; 'and in the discipline of the schools he was incomparable.' He was promoted to various dignities—to the wardenship of Baliol and Canterbury Halls, to the living of Fillingham, and finally to that of Lutterworth in Leicestershire, with which his name is most intimately associated, as where he dwelt longest, and where he died.

Wycliffe first rose into national publicity by his bold denunciations of the mendicant friars, who were swarming over the land, and interfering with the duties of the settled priesthood. In this contest he carried with him the sympathy, not only of the laity, but of the clergy, who saw in the friars troublesome interlopers. He treated all the orders with asperity. He branded the higher as hypocrites, who, professing beggary, had stately houses, rode on noble horses, and had all the pride and luxury of wealth, with the ostentation of poverty. The humbler, he rated with indignation as common able-bodied vagabonds, whom it was a sin to permit to saunter about, and fatten on the thrift of the pious.

Edward III., in 1366, called on Wycliffe for his advice as to his relation to the pope. Urban V. had demanded payment of the tribute due under the convention of King John, and which had fallen thirty-three years into arrear. With many subtle and elaborate arguments, Wycliffe counselled resistance of the claim. He was still further honoured by his appointment, in 1374, as a member of a deputation sent by Edward to Gregory XI. to treat as to the adjustment of differences between English and ecclesiastical law. It is supposed that the experience gained in this journey sharpened and intensified Wycliffe's aversion to the papacy, for on his return he began to speak of the pope as 'Antichrist, the proud worldly priest of Rome, and the most cursed of clippers and cut-purses.' This daring language soon brought him into conflict with the authorities, and in 1377 he was cited to appear at St Paul's, to answer the charge of holding and publishing certain heretical doctrines. Wycliffe presented himself on the appointed day, accompanied by his friend John of Gaunt, Duke of Lancaster; but an altercation arising between Gaunt and Courtney, the bishop of London, the crowd broke into a tumult, and the court separated without doing anything. Other attempts were made to bring him to judgment, but with no decisive results. His teaching was condemned by convocation; Richard II., by letter, commanded his silence at Oxford, but at Lutterworth he wrote and preached with undaunted spirit. He owed something of this impunity to the great schism which had broken out in 1378 in consequence of the election of two popes, by which for several years the papal power was paralysed. Wycliffe seized the occasion for writing a tract, in which he called

upon the kings of Christendom to use the opportunity for pulling down the whole fabric of the Romish dominion, 'seeing that Christ had cloven the head of Antichrist, and made the two parts fight against each other.' The favour of John of Gaunt was likewise a strong defence, but it is doubtful whether he would have cared to stand between Wycliffe and the terrible penalty of proven heresy. Gaunt was no theologian; he rejoiced in humbling the clergy, but he shewed no desire to tamper with the faith of the people.

Wycliffe's opinions are difficult to define, first, because they were progressive, changing and advancing with experience and meditation; and second, because the authorship of many manuscripts ascribed to him is doubtful. He commenced by questioning the polity of Roman Catholicism, and ended in asserting its theology to be erroneous. In doctrine, Calvin might have claimed Wycliffe as a brother, but far beyond Calvin he was ready to accord perfect freedom of conscience. 'Christ,' he said, 'wished his law to be observed willingly, freely, that in such obedience men might find happiness. Hence he appointed no civil punishment to be inflicted on the transgressors of his commandments, but left the persons neglecting them to the suffering which shall come after the day of doom.' In the matter of church-government, he advocated principles which would almost identify him with the Independents. The whole framework of the hierarchy he pronounced a device of priestly ambition—the first step in the ascending scale, the distinction between bishop and presbyter being an innovation on the practice of the primitive church, in which all were equal. He was opposed to establishments and endowments, insisting that pastors should depend on the free offerings of their flocks. As a missionary, he was the director of a number of zealous men, styled 'poor priests,' who received and busily diffused his doctrines. 'Go and preach,' he said to them; 'it is the sublimest work: but imitate not the priests, whom we see after the sermon sitting in the ale-houses, or at the gaming-table, or wasting their time in hunting. After your sermon is ended, do you visit the sick, the aged, the poor, the blind, and the lame, and succour them according to your ability.'

His industry was astonishing. The number of his books, mostly brief tracts, baffles calculation. Two hundred are said to have been burned in Bohemia. His great work was the translation of the Scriptures from the Vulgate into English. Of this undertaking, Lingard says: 'Wycliffe multiplied copies with the aid of transcribers, and his poor priests recommended it to the perusal of their hearers. In their hands it became an engine of wonderful power. Men were flattered with the appeal to their private judgment; the new doctrines insensibly acquired partisans and protectors in the higher classes.' Wycliffe's translation did much to give form and permanence to the English language, and it will for ever remain a mighty landmark in its history.

Dean Milman thus pithily sums up Wycliffe's merits as an author: 'He was a subtle schoolman, and a popular pamphleteer. He addressed the students of the university in the language and logic of the schools; he addressed the vulgar, which included no doubt the whole laity and the vast number of the parochial clergy, in the simplest and

most homely vernacular phrase. Hence he is, as it were, two writers: his Latin is dry, argumentative, syllogistic, abstruse, obscure; his English rude, coarse, but clear, emphatic, brief, vehement, with short stinging sentences and perpetual hard antithesis.'

In 1379, Wycliffe was attacked with an illness which his physicians asserted would prove fatal. A deputation of friars waited on him to extort a recantation, but the lion sat up in bed and sternly dismissed them, saying: 'I shall not die, but recover, and live to expose your evil deeds;' and he did live until 1384. On the 29th of December of that year, he was in his church hearing mass when, just as the host was about to be elevated, he was struck down with palsy. He never spoke more, and died on the last day of the year, aged about sixty.

Wycliffe's influence appeared to die with him; more than a century elapsed between his death and the birth of Latimer; yet his memory, his manuscripts, and above all his version of the Scriptures, gave life to the Lollards, whom no persecution could extirpate, and whose faith at last triumphed in the supremacy of Protestantism. In 1415, the Council of Constance, which consigned John Huss and Jerome of Prague to the flames, condemned forty-five articles, said to be extracted from the works of Wycliffe, as erroneous and heretical. Wycliffe they designated an obstinate heretic, and ordered that his bones, if they could be distinguished from those of the faithful, should be dug up and cast on a dunghill. Thirteen years later, this sentence was executed by the bishop of Lincoln, at the command of the pope. The Reformer's bones were disinterred and burned, and the ashes cast into the Swift, whence, says Fuller, 'they were conveyed to the Avon, by the Avon to the Severn, by the Severn to the narrow seas, and thence to the main ocean. Thus the ashes of Wycliffe are the emblem of his doctrine, which is now dispersed all the world over.'

STRUGGLE FOR A CASK OF WINE.

There are many curious circumstances connected with the ownership of abandoned, lost, or unclaimed property. In such cases the crown generally comes forward as the great claimant, subject of course to such pretensions as other parties may be able to substantiate in the matter. If a man finds or picks up treasure, it becomes a knotty point to determine whether he may keep it. If the owner has thrown it away, the finder may keep it; but if the owner hides it or loses it, without an intention of parting with it, there is often much legal difficulty in deciding whether the crown or any one else acquires a right to it.

And so it is out at sea, and on the British coasts. The laws concerning *wrecked* property are marked by much minuteness of detail, on account of the great diversity of the articles forming the cargoes of ships, and the relation they bear to the 'sink or swim' test. As a general rule, the king or queen is entitled to wrecks or wrecked property, unless and until a prior claimant appears. The main object of this prerogative was, not to grasp at the property for emolument, but to discourage the barbarous custom of wrecking, by which ships and human life were often purposely sacrificed as a means of giving booty to the wreckers who lived

on shore. Then, to determine who shall obtain the property if the crown waives its claim, shipwrecked goods are divided into four classes—*flotsam*, *jetsam*, *ligan*, and simple *wreck*. *Flotsam* is when the ship is split, and the goods float upon the water between high and low water marks. *Jetsam* is when the ship is in danger of foundering, and the goods are cast into the sea for the purpose of saving it. *Ligan*, *ligam*, or *lagan*, is when heavy goods are thrown into the sea with a buoy, so that mariners may know where to retake them. *Wreck*, properly so called, is where goods shipwrecked are cast upon the land. By degrees, as the country became more amenable to law, the sovereign gave up the claim to some of these kinds of wrecked property, not unfrequently vesting them in the lords of adjacent manors. *Ligan* belongs to the crown if no owner appears to claim it; but if any owner appears, he is entitled to recover the possession; for even if the goods were cast overboard without any cask or buoy, in order to lighten the ship, the owner is not, by this act of necessity, construed to have renounced his property. All the goods called *flotsam*, *jetsam*, and *ligan* become *wreck* if thrown upon the land, instead of floating, and subject to the laws of wreck. By a very curious old law, if a man, or a dog, or a cat escape 'quick' or alive out of a ship, that ship shall not be regarded as wreck; it still continues the property of the same owner as before; the words man, dog, or cat, are interpreted to mean any living animals by which the ownership of the vessel might be ascertained. Lord Mansfield put a very liberal interpretation upon this old statute. A case was brought before him for trial, in which the lord of a manor claimed the goods of a wrecked ship cast on shore, on the ground that no living creature had come alive from the ship to the shore. But Lord Mansfield disallowed this claim. He said: 'The coming to shore of a dog or a cat alive can be no better proof than if they should come ashore dead. The escaping alive makes no sort of difference. If the owner of the animal were known, the presumption of the goods belonging to the same person would be equally strong, whether the animal were living or not.'

The records of our law and equity courts give some curious information concerning the struggles between the crown and other persons, concerning the right to property thrown ashore. One famous case is known by the title *Rex v. Two Casks of Tallow*. Another, *Rex v. Forty Nine Casks of Brandy*, shews the curious manner in which the judgment of the court awarded some casks to the crown and some to the lord of the manor—according as the casks were found floating beyond three miles from the shore, floating *within* that distance, lying on the wet foreshore, lying on the dry foreshore, or alternately wet and dry.

A still more curious case was tried at the end of December 1809, between the crown and Mr Constable, lord of the manor of Holderness, in Yorkshire. It was a struggle who should obtain a cask of wine, thrown ashore on the coast of that particular manor. The lord's bailiff, and some custom-house officers, hearing of the circumstance, hastened to the spot, striving which should get there first. The officers laid hold of one end of the cask, saying: 'This belongs to the king.' The bailiff laid hold of the other end, and claimed it for the

lord of the manor. An argumentative dispute arose. The officers declared that it was smuggled, 'not having paid the port duty.' The bailiff retorted that he believed the wine to be *Madeira*, not port. The officers, smiling, said that they meant port of entry, not port wine—a fact that possibly the bailiff knew already, but chose to ignore. The bailiff replied: 'It has been in no port, it has come by itself on the beach.' The officers resolved to go for further instructions to the custom-house. But here arose a dilemma: what to do with the cask of wine in the interim? As the bailiff could not very well drink the wine while they were gone, they proposed to place it in a small hut hard by. They did so; but during their absence, the bailiff removed it to the cellar of the lord of the manor. The officers, when they returned, said: 'Oh, ho! now we have you; the wine is the king's *now*, under any supposition; for it has been removed *without a permit*.' To which the bailiff responded: 'If I had not removed the wine without a permit, the sea would have done so the next tide.' The attorney-general afterwards filed an information against the lord of the manor; and the case came on at York—on the question whether the bailiff was right in removing the wine without a custom-house 'permit?' The arguments *pro* and *con* were very lengthy and very learned; for although the cask of wine could not possibly be worth so much as the costs of the case, each party attached importance to the decision as a precedent. The decision of the court at York was a special verdict, which transferred the case to the court of Exchequer. The judgment finally announced was in favour of the lord of the manor—on the grounds that no permit is required for the removal of wine unless it has paid duty; that wine to be liable to duty, must be imported; that wine cannot be imported *by itself*, but requires the agency of some one else to do so; and that therefore wine wrecked, having come on shore by itself, or without human volition or intention, was not 'imported,' and was not subject to duty, and did not require a permit for its removal. The trial virtually admitted the right of the lord of the manor to the wine, as having been thrown ashore on his estate; the only question was whether he had forfeited it by the act of his servant in removing it from the spot without a permit from the custom-house officers; and the decision of the court was in his favour on this point. But it proved to be by far the most costly cask of wine he ever possessed; for by a strange arrangement in these Exchequer matters, even though the verdict be with the defendant, he does not get his costs.

RINGING OUT THE OLD YEAR: CONCLUSION.

The close of the year brings along with it a mingled feeling of gladness and melancholy—of gladness in the anticipation of brighter days to come with the advent of the New Year, and of melancholy in reflections on the fleeting nature of time, and the gradual approach to the inevitable goal in the race of life. That so interesting an occasion should be distinguished by some observance or ceremony appears but natural, and we accordingly find various customs prevail, some sportive, others serious, and others in which both the mirthful and pensive moods are intermingled.

One of the best known and most general of these customs is, that of sitting up till twelve o'clock on the night of the 31st December, and, then, when the eventful hour has struck, proceeding to the house-door, and unbarring it with great formality to 'let out the Old, and let in the New Year.' The evening in question is a favourite occasion for social gatherings in Scotland and the north of England, the assembled friends thus welcoming together the birth of another of Father Time's ever-increasing, though short-lived progeny. In Philadelphia, in North America, we are informed that the Old Year is there 'fired out,' and the New Year 'fired in,' by a discharge of every description of firearm—musket, fowling-piece, and pistol. In the island of Guernsey, it used to be the practice of children to dress up a figure in the shape of a man, and after parading it through the parish, to bury it on the sea-shore, or in some retired spot. This ceremony was styled 'enterrer le vieux bout de l'an.'

A custom prevails, more especially among English dissenters, of having a midnight service in the various places of worship on the last night of the year, the occasion being deemed peculiarly adapted both for pious meditations and thankfulness, and also for the reception and retention of religious impressions. And to the community at large, the passing away of the Old Year and the arrival of his successor is heralded by the peals of bells, which, after twelve o'clock has struck, burst forth from every steeple, warning us that another year has commenced. At such a moment, painful reflections will obtrude themselves, of time misspent and opportunities neglected, of the fleeting nature of human existence and enjoyment, and that ere many more years have elapsed, our joys and sorrows, our hopes and our forebodings, will all, along with ourselves, have become things of the past. Such is the dark side of the question, but it has also its sunny side and its silver lining :

'For Hope shall brighten days to come
And Memory gild the past.'

And on such an occasion as we are contemplating, it is both more noble and more profitable to take a cheerful and reassuring view of our condition, and

that of humanity in general—laying aside futile reflections on past imprudence and mismanagement, and resolving for the future to do our utmost in fulfilling our duty to God and our fellow-men.

With the 'Ringing out of the Old Year' we now conclude our labours in *The Book of Days*; and in reference to the aspirations just alluded to, which every generous mind must feel, we take leave of our readers, in the subjoined utterance of our greatest living poet :

'Ring out wild bells to the wild sky,
The flying cloud, the frosty light :
The Year is dying in the night ;
Ring out, wild bells, and let him die.

Ring out the old, ring in the new,
Ring, happy bells, across the snow :
The Year is going, let him go ;
Ring out the false, ring in the true.

Ring out the grief that saps the mind,
For those that here we see no more ;
Ring out the feud of rich and poor,
Ring in redress to all mankind.

Ring out a slowly-dying cause,
And ancient forms of party strife ;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
The faithless coldness of the times ;
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.

Ring out false pride in place and blood,
The civic slander and the spite ;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease ;
Ring out the narrowing lust of gold ;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart, the kindlier hand ;
Ring out the darkness of the land,
Ring in the Christ that is to be.'
